**Reproductive Biology of Plants** Kishan Gopal Ramawat, Jean-Michel Merillon, K. R. Shivanna, 2016-04-19 Reproductive biology is the basis of species improvement and a thorough understanding of this is needed for plant improvement whether by conventional or biotechnological methods This book presents an up to date and comprehensive description of reproduction in lower plants gymnosperms and higher plants It covers general plant biology pollination

**Reproductive Biology and Plant Breeding** Yvette Dattee, Christian Dumas, Andre Gallais, 2012-12-06 This volume has been produced for the XI 11th EUCARPIA Congress EUCARPIA the European Association for Plant breeding currently has 1 200 members including scientists and staff of both public and private organizations Its aim is to promote scientific and technical research and cooperation In the field of plant breeding and thereby to contribute to the development of agriculture Every three years EUCARPIA organizes a scientific congress In 1992 the Xilith EUCARPIA Congress will be held In ANGERS France and the theme Is Reproductive biology and plant breeding Reproduction of plant material Is central to selection The geneticist the plant breeder and the seed grower all use sexual and vegetative reproduction during the various stages of plant breeding and creation of variety The possibility of unlimited interspecific reproduction the use of gametogenesis dysfunction the creation of auto and allogamy and the cloning of the best genotypes are the challenges before the plant breeder To understand how the reproductive system conditions the genetic structure of a population and to Investigate the relationships between the reproductive mode and the organization of variability Is a central key to genetic progress The articles presented In this book review the current state of knowledge of reproductive biology and Its impact on variety creation

**Plant Reproductive Biology and Conservation** Rupam Kapoor, Inderdeep Kaur, Monika Koul, 2014-12-30 The reproductive biology of plants is an emerging area in plant science This volume is made up of eighteen chapters written by eminent scientists who work on various aspects of plant reproduction conservation of species and molecular characterization of reproductive traits It provides updated literature on topics of academic and research interest

Conifer Reproductive Biology Claire G. Williams, 2009-05-01 When it comes to reproduction gymnosperms are deeply weird Cycads and conifers have drawn out reproduction at least 13 genera take over a year from pollination to fertilization Since they don't apparently have any selection mechanism by which to discriminate among pollen tubes prior to fertilization it is natural to wonder why such a delay in reproduction is necessary Claire Williams book celebrates such oddities of conifer reproduction She has written a book that turns the context of many of these reproductive quirks into deeper questions concerning evolution The

origins of some of these questions can be traced back Wilhelm Hofmeister's 1851 book which detailed the revolutionary idea of alternation of generations. This alternation between diploid and haploid generations was eventually to become one of the key unifying ideas in plant evolution. Dr Williams points out that alternation of generations in conifers shows strong divergence in the evolution of male and female gametes as well as in the synchronicity of male and female gamete development. How are these coordinated to achieve fertilization? Books on conifer reproduction are all too rare. The only major work in the last generation was Hardev Singh's 1978 *Embryology of Gymnosperms*, a book that summarized the previous century's work. Being a book primarily about embryology it stopped short of putting conifer reproduction in a genetic or evolutionary context.

Reproductive Ecology of Flowering Plants: Patterns and Processes Rajesh Tandon, K. R. Shivanna, Monika Koul, 2020-08-07 Sexual reproduction is the predominant mode of perpetuation for flowering plant species. Investigating the reproductive strategies of plants has grown to become a vast area of research and in crop plants covers events from flowering to fruit and seed development; in wild species it extends up to seed dispersal and seedling recruitment. Thus reproduction determines the extent of yield in crop plants and in wild plants also determines the efficacy of recruiting new adults to the population, making this field important both from fundamental and applied plant biology perspectives. Moreover, in light of the growing concerns regarding food and nutritional security for the growing population and preserving biological diversity, reproductive biology of flowering plants has acquired special significance. Extensive studies on various facets of reproduction are being carried out around the world. However, these studies are scattered across research journals and reviews from diverse areas of biology. The present volume covers the whole spectrum of reproductive ecology from phenology and floral biology to sexuality and pollination biology, ecology including floral rewards, breeding systems, apomixis and seed dispersal. In turn, transgene flow, its biosafety and mitigation approaches and the global pollinator crisis, which has become a major international concern in light of the urgent need to sustain crop yield and biodiversity, are discussed in detail. Given its scope, the book offers a valuable resource for students, teachers and researchers of botany, zoology, ecology, agriculture and forestry as well as conservation biologists.

**Reproductive Biology of Plants** Hussain A., 2016 Reproductive Biology of Angiosperms Yash Mangla, Priyanka Khanduri, Charu Khosla Gupta, 2023-01-05 *Reproductive Biology of Angiosperms: Concepts and Laboratory Methods* will cater to the needs of undergraduate and graduate students pursuing core and elective courses in life sciences, botany and plant sciences. The book is designed according to the syllabi followed in major Indian universities. It provides the latest and detailed description of structures and processes involved in reproduction in higher plants. The inclusion of colour photographs and illustrations will be an effective visual aid to help readers. Interesting and significant findings of the latest research taking place in the field of reproductive biology are also provided in boxes. At the end of each chapter, the methodology of hands-on exercises is presented for the implementation and practice of theoretical concepts.

Sexual Plant Reproduction Mauro Cresti, Antonio Tiezzi, 2012-12-06 In recent years there has been a growing

awareness of the importance of reproductive biology to crop production and there has been a tremendous increase in research on reproductive structures of higher plants Presented here is a wide information of different aspects of micro and macrosporogenesis pollen stigma interaction and recognition pollen tube growth cytoskeleton in vitro and in vivo gamete fusion and incompatibility The most advanced techniques employed in studies on reproductive biology of higher plants are described in detail Relation of the Reproductive Biology of Plants to the Structure and Function of Four Plant

Communities Jim Pojar,1974 **Reproductive Biology of Plants Quantitative Biology** HUSSAIN A.,2018 **Genetic control of self-incompatibility and reproductive development in flowering plants** Elizabeth G. Williams,A.E.

Clarke,R.B. Knox,1994-08-31 Plant reproductive biology has undergone a revolution during the past five years with the cloning sequencing and localization of the genes important in reproduction These advantages in plant molecular biology have led to exciting applications in plant biotechnology including the genetic engineering of male sterility and other reproductive processes This book presents an interesting and contemporary account of these new developments from the scientists in whose laboratories they have been made The chapters focus on two areas the molecular biology of self incompatibility which is the system of self recognition controlled by the S gene and related genes and the cellular and molecular biology of pollen development and genetic dissection of male sterility Some chapters feature Arabidopsis with its unique genetic system Reproduction is vital for seed production in crop plants and this book presents new approaches to manipulate plant breeding systems for the 21st century **Reproductive Biology and Taxonomy of Vascular Plants** J. G. Hawkes,2013-09-17

Reproductive Biology and Taxonomy of Vascular Plants is a collection of papers presented at the Conference on Reproductive Biology and Taxonomy of Vascular Plants held at the Department of Botany University of Birmingham on April 23 25 1965 The conference primarily explores the reproductive biology of flowering plants and ferns to arrive at a better understanding of variation patterns and modes of evolution This book is divided into six chapters and begins with a discussion on the breeding systems variation and adaptation The next chapters survey the practical implications of knowledge of breeding systems and other aspects of the reproductive biology of flowering plants as well as the pollination mechanisms in orchids and the evolution of this family in relation to insect evolution These chapters include an account of the foraging behavior of honey bees and its importance to the botanist in delineating the behavior of the insects that pollinate the plants Other chapters deal with the mechanisms of plant dispersal and establishment the aspects of seed dormancy and germination and reproductive capacity related to evolutionary processes The concluding chapters explore the many aspects of apomixis in its wider sense and survey how the variation patterns of apomicts were due to this special mode of reproduction This book is directed primarily to botanists **Plant Reproductive Ecology : Patterns and Strategies** Jon and Lesley Lovett-Doust

Professor of Biology the University of Windsor,1988-07-07 This collection of reviews by leading investigators examines plant reproduction and sexuality within a framework of evolutionary ecology providing an up to date account of the field The

contributors discuss conceptual issues showing the importance of sex allocation sexual selection and inclusive fitness and the dimensions of paternity and maternity in plants The evolution maintenance and loss of self incompatibility in plants the nature of sex choice in plants and sex dimorphism are all explored in detail Specific forms of biotic interactions shaping the evolution of plant reproductive strategy are discussed and a taxonomically based review of the reproductive ecology of non angiosperm plant groups such as bryophytes ferns and algae is presented Together these studies focus on the complexities of plant life cycles and the distinctive reproductive biologies of these organisms while showing the similarities between nonflowering plants and the more thoroughly documented flowering species
