The fifteen papers comprising this book were chosen out of the sixty one contributions to the Symposium and Section on Social Systems held in the context of the Fourth International Congress of Cybernetics and Systems Amsterdam The Netherlands 21-25 August 1978 These papers assembled here on the basis of their topicality depth and originality cover a wide range of problems ranging from Societies and Turing machines to Dialectics and catastrophe An interesting array of

themes is considered by authors from six countries It is felt that these papers some of them thought provoking and of great merit will cast new light on social problems Though the contributions consider a wide variety of topics the underlying trend is apparent in many instances Of special value is the discussion of the relevance of cybernetics and systems to a wide spectrum of social problems I think the treatment and the approach adopted by the contributors merit wide attention since their contributions constitute an appreciable advance in a fairly novel field 1 ROSE BLACKBURN U K May 1978
