Research Foresight:

Corporate Foresight René Rohrbeck, 2010-11-04 Have you ever wondered why even large companies fail when faced with changes in their environment Would you be surprised to learn that the average life expectancy of a Fortune 500 company is below 50 years This book presents findings from 19 case studies in multinational companies such as Siemens Volkswagen General Electric Philips and Deutsche Telekom Ren Rohrbeck proposes a Maturity Model to assess how prepared a company is to respond to external disruptive change He uses data from 107 interviews with board members corporate strategists innovation managers and corporate foresight professionals to present and discuss best practices Using illustrations to show the complex interaction of corporate foresight with other units such as innovation and strategic management Ren Rohrbeck provides the reader with rich insights on how to make an organization agile and reactive towards change For scholars this book proposes multiple hypotheses and frameworks for future research University Research in Transition OECD, 1999-09-14 This study consolidates the most up to date data on resources and structures of research activities in higher education systems and provides illustrative examples of institutional adaptations **Systems and Innovation Research in Transition** Jakob Edler, Rainer Walz, 2024-09-25 In the last decades it has become more and more imperative for our societies and for decision makers in all areas of society to understand the dynamics through which innovation systems develop and through which socio technical systems transform themselves As both innovation and transformation are strongly intertwined it has equally become imperative to analyse their dynamics as well as their interplay This open access volume reflects on the research fields that have developed in the last five decades to do exactly that It defines and delineates research on systems and innovation as encompassing the scientific study of first the conditions dynamics and impacts associated with the generation and uptake of innovations and second the development and transformation of functional systems satisfying essential needs such as the provision of energy or water Further the area of Systems and Innovation Research SIR is characterised by problem and stakeholder oriented research We chose five decades as time frame because we noted that roughly 50 years ago a number of research institutes dedicated to SIR were founded and the SIR area started to grow significantly We present a systematic history of nine selected fields within the area of SIR Innovation policy Innovation indicators Foresight Policy Evaluation Technology Assessment Production Paradigms Renewable Energies Energy Efficiency Water Use We also present a conceptual framework to understand the processes by which the research fields have developed This allows to draw general lessons as to what drives fields throughout their development and how their role vis vis policy businesses and societies changes over time It also allows to speculate about future challenges and trends in the SIR area This is important because if anything the need to govern transformation through innovation will further grow in the future and with it the need to understand the underlying dynamics **Modernisation of Science Policy and Management Approaches in Central and South East Europe** Edvard Kobal, Slavo Radošević, 2005

Technology Assessment Tugrul U. Daim, 2011 Understanding the technology dynamics is a required capability in today's technology driven industries This volume focuses on three areas technology assessment technology forecasting and technology diffusion It shows an introduction to different types of assessment methods and applications from different sectors including energy healthcare and communications technology forecasting and foresight and a review of conventional and emerging methods and the diffusion of technologies by exploring adoption of products and services from different sectors Back cover

Pasteur's Quadrant Donald E. Stokes, 2011-03-01 Over fifty years ago Vannevar Bush released his enormously influential report *Science the Endless Frontier* which asserted a dichotomy between basic and applied science This view was at the core of the compact between government and science that led to the golden age of scientific research after World War II a compact that is currently under severe stress In this book Donald Stokes challenges Bush's view and maintains that we can only rebuild the relationship between government and the scientific community when we understand what is wrong with that view Stokes begins with an analysis of the goals of understanding and use in scientific research He recasts the widely accepted view of the tension between understanding and use citing as a model case the fundamental yet use inspired studies by which Louis Pasteur laid the foundations of microbiology a century ago Pasteur worked in the era of the second industrial revolution when the relationship between basic science and technological change assumed its modern form Over subsequent decades technology has been increasingly science based But science has been increasingly technology based with the choice of problems and the conduct of research often inspired by societal needs An example is the work of the quantum effects physicists who are probing the phenomena revealed by the miniaturization of semiconductors from the time of the transistor's discovery after World War II On this revised interactive view of science and technology Stokes builds a convincing case that by recognizing the importance of use inspired basic research we can frame a new compact between science and government His conclusions have major implications for both the scientific and policy communities and will be of great interest to those in the broader public who are troubled by the current role of basic science in American democracy

Frames, 2003 *Research Foresight* Ben R. Martin, John Irvine, 1989 An examination of the modeling processes used in data analysis of the reserve component of the American military LC got this wrong Martin and Irvine are the authors not the editors Their study reviews the experience of eight leading industrial nations in identifying and exploiting research that is likely to yield economic and social benefits in the medium to long term They also propose a framework for making more effective use of research foresight in the policy process Distributed by Columbia U Press Annotation copyrighted by Book News Inc Portland OR
