Women in Midlife Grace Baruch, 2012-12-06 The Study of Women In Midlife GRACE K BARUCH AND JEANNE BROOKS GUNN To describe the middle years that relatively long span when one is neither young nor old as a neglected period may no longer be accurate given current scientific and popular interest in adult development and aging But midlife is still too often seen merely as a kind of staging area on the way to old age when one gathers one's forces and tries to stock up on assets health money relationships that will be needed for the rigors of the last phase of life The middle years have been characterized more as a transition period than as a time of growth satisfaction and creativity As this volume will show although midlife is not without its difficulties it is for many women a time of unexpected pleasure even power MAJOR THEMES A central theme of this volume is the impact of social change The influence of economic conditions of ideology of the normative timing of such life events as age of marriage and childbearing are addressed in many chapters from many different perspectives Social changes are shown to have both negative and positive consequences On the negative side for example the sex differential in life expectancy is a biosocial phenomenon that greatly restricts the availability of sexual partners or more precisely heterosexual partners for older women

*Advanced Abnormal Child Psychology* Michel Hersen, Robert T. Ammerman, 2000-02 There was a time when abnormal child psychology was the stepchild of abnormal psychology with perhaps one or two chapters in an entire advanced textbook devoted to children Given the explosive amount of new research on child development in general since the 1980s stepchild is obviously no longer a valid characterization Indeed in the last 15 years many new journals devoted to childhood problems have made their appearance on library bookshelves The first edition of this book was assembled in an effort to integrate the empirical and clinical literatures and show the advanced undergraduate and beginning graduate student the breadth and depth of our existing knowledge about the disorders that manifest themselves early in development Now since its publication in 1995 a great deal more work has been done This revised and expanded second edition includes much new material from the first edition authors and from several new ones all respected experts in the field Part I offers an overview It outlines historical developments with documentation of the neglect and abuse that children suffered at the hands of society well into the 20th century developmental psychopathology as a theoretical framework to guide research and clinical efforts psychophysiological determinants of behavior with special attention focused on childhood autism and attention deficit and antisocial conduct disorders theoretical methodological and practical considerations involved in determining investigatory paths including sampling design selection measurement data analysis and pragmatics and the reactions of children families and society to complex and diverse child health problems Part II addresses assessment and treatment issues It discusses behavioral treatment of childhood disorders and multiple case examples of commonly used techniques new developments in pharmacological treatment and sound guidelines for the consideration of pharmacotherapy and formulations and a review of

preventive interventions Part III examines specific disorders of childhood and adolescence It discusses anxiety disorders affective and mood disorders mental retardation autism specific developmental disorders conduct disorder attention deficit hyperactivity disorder ADHD and eating disorders psychological aspects of pediatric disorders interventions tailored to the needs of the child and family to maximize adaptation and recovery and substance use disorders ranging from models emphasizing social influences to those focusing on biological vulnerabilities Each chapter in Part III has an identical structure clinical description causes course familial contributions psychological and genetic influences current treatments summary and includes numerous case illustrations

Speece, Barbara K. **Interaction and Psychopathology** Theodore Jacob, 2013-11-21 Throughout the past 30 years there have been significant developments in theory and research relating family variables to various psychopathologies The potential importance of such efforts is obviously great given the implications that reliable and valid findings would hold for treatment and preventive inter

ventions across a variety of settings and populations The purpose of this volume is to present a critical evaluation of this field of inquiry through a detailed assessment of the theoretical perspectives the methodological issues and the substantive findings that have characterized family studies of psychopathology during the past several decades The book is divided into four parts each containing contributions from leading researchers and theorists in the field The first part Background presents a review of the major streams of influence that have shaped the development and the present character of the field The second part Conceptual Foundations contains presentations of general models and orientations relevant to family studies of psychopathology In most cases a particular theoretical perspective provides the primary underpinning of the approach the exception to this format being the family model of David Reiss based on the concept of the family paradigm The major objective of this part is to present a broad yet detailed set of chapters that address the conceptual status of the field It is hoped that this material will provide a rich background against which subsequent discussions of specific theories methods and findings can be more fully appreciated

**Comparative Methods in Psychology** M. H. Bornstein, 2014-01-14 First published in 1980 Psychology is today increasingly diversified sophisticated pluralistic and specialized and psychologists venture beyond the confines of their narrow subdiscipline only rarely Yet psychologists with different specialties encounter similar problems ask similar questions and share similar concerns Unfortunately there are far too few forums for the expression or exploration of what is common in psychology The series Crosscurrents in Contemporary Psychology is intended to serve as such a forum The purpose of this volume Comparative Methods in Psychology is to make available to the psychological community thoughtful essays that examine the history philosophy theory methodology and experimentation representative of major comparative methods The chapters in this collection are intended to introduce students of psychology to specialized modes of comparison from the perspectives of prominent contributors and to promote mutual discussion among comparativists of issues and concerns common to all types of comparison

**Handbook of Clinical Behavioral Pediatrics** Alan M. Gross, Ronald S. Drabman, 2013-03-07 Since 1978 the editors have collaborated on several research projects and spent many hours at conventions discussing research graduate education and patient care The idea for this volume arose when we both concluded that the area of behavioral pediatrics needed a how to book Several important scholarly reviews had recently appeared They presented excellent summary information concerning the general assumptions and theories underlying the area of behavioral medicine with children But these volumes devote very little attention to the application of clinical methods What was needed we thought was a book that would allow graduate students and practicing clinicians the opportunity to peer into the minds of eminent practitioners and understand their thinking Thus the book was conceived Editing books represents a special kind of challenge One has to sell an idea to a group of distinguished colleagues They have to believe enough in that idea to devote the considerable time and effort necessary to bring thought into reality In this case there were two ideas we tried to sell to our colleagues

**Life-Span Development and Behavior** David L. Featherman, Richard M. Lerner, Marion

Perlmutter, 2014-01-14 This volume continues the tradition of the Life Span Development Series presenting overviews of research programs on a variety of developmental topics. Research and theory in life span development have given increased attention to the issues of constancy and change in human development and to the opportunities for and constraints on plasticity in structure and function across life. Acknowledging the need for and existence of interconnection between age and developmental periods, it focuses on conditions for possibly discontinuous development that emerge at later periods. Contributors to this series are sensitive to the restrictive consequences of studying only specific age periods such as old age, infancy or adolescence. Each scholar attempts to relate the facts about one age group to similar facts about other age groups and to move toward the study of transformation of characteristics and processes over the life span.

*Multicultural Understanding of Child and Adolescent Psychopathology* Thomas M. Achenbach, Leslie Rescorla, 2007-01-01 With an eye toward prevention and treatment, the book discusses specific contributions that multicultural research can make to

identifying children and families at risk and developing effective clinical services BOOK JACKET Current Catalog  
National Library of Medicine (U.S.), First multi year cumulation covers six years 1965 70 **Individuals as Producers of  
Their Development** Richard M Lerner, Nancy A. Busch-Rossnagel, 2013-09-03 Individuals as Producers of Their  
Development A Life Span Perspective provides an assessment of the usefulness of viewing the individual as an active  
contributor to his or her development It extends the breadth of organism environment reciprocities beyond those involved  
with the child and family On the one hand this extension involves a consideration of the role of evolutionary biological  
processes on the other it pertains to the broader ecology of human development the social network lying outside the family  
and the physical environmental contexts of development Person context reciprocities linked to variables that may play their  
greatest role in the extrafamilial context are also considered Variables such as physical attractiveness race and physical  
handicap are examples of those discussed in this regard Finally because of the greater scope of the analysis a potentially  
greater data base is examined in a search for documentation of the presence and role of dynamic person context interactions
