Methods in Human Geography Robin Flowerdew, David M. Martin, 2013-10-08 First published in 2004 This text is an essential guide to current research approaches in human geography covering all aspects of undertaking a geography research project from the selection of an appropriate topic through to the organisation and writing of the final report Covering a wide range of contemporary research methods the authors provide practical advice on how to actually undertake

a project **Introduction to Scientific Geographic Research** L. Lloyd Haring, John F. Lounsbury, 1971 **Key Methods in Geography** Nicholas Clifford, Meghan Cope, Thomas Gillespie, 2023-04-13

Key Methods in Geography is the perfect introductory companion providing an overview of qualitative and quantitative methods for human and physical geography. The fourth edition of this essential and accessible primer covers the breadth of the discipline and offers critical and contextual perspectives on research methods. New coverage takes account of newer technologies and practice and 9 new chapters bring greater diversity of positionality and perspective to the volume including decolonial methods, predicting, visualizing and modelling climate and environmental change and writing up research. Case study examples, summaries and exercises have been included in each chapter to enable learning. This is vital reading for any student undertaking a Geography Methods module as well as a valuable resource for any student embarking on independent research as part of their degree.

An Introduction to Scientific Research Methods in Geography Daniel R. Montello, 2006

Explaining the key elements of scientific philosophy and basic research concepts, this text discusses all parts of the research process including generating research ideas, data analysis and the use of geographic information techniques.

Fostering Transformative Research in the Geographical Sciences National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Earth Sciences and Resources, Geographical Sciences Committee, Committee on Identifying Transformative Research in the Geographical Sciences, 2019-04-22

The central purpose of all research is to create new knowledge. In the geographical sciences, this is driven by a desire to create new knowledge about the relations between space, place and the anthropogenic and non-anthropogenic features and processes of the Earth. But some research goes beyond these modest aims and creates new opportunities for further research or affects the process of knowledge acquisition more broadly or changes the way other researchers in a domain think about the world and go about their business. Due to its positive impacts, transformative research can be regarded as inherently having greater value than more conventional research and funding agencies clearly regard transformative research as something to be encouraged and funded through special programs. Assessments of transformative research funding initiatives are few and provide a mixed picture of their effectiveness. The challenge is whether transformative research can be identified at the time it is proposed rather than after it has been conducted, communicated and its influence on the discipline has become clear.

Fostering Transformative Research in the Geographical Sciences reviews how transformative research has emerged in the past, what its early markers were and makes recommendations for how it can be nurtured in the future.

Researching Human Geography Anna Davies, Keith Hoggart, Loretta Lees, 2014-04-04

Researching Human Geography is an essential new text for any geography student about to embark on a research project. An understanding of how different theories of knowledge have influenced research methodologies is crucial in planning and designing effective research. This book makes this link clear and explores how

various philosophical positions from positivism to post structuralism have become associated with particular methodologies The book gives an overview of a wide range of methods and data collection both quantitative and qualitative and explores their strengths and weaknesses for different kinds of research Researching Human Geography also looks at the various techniques available for the analysis of data which is presented as an integral and ongoing part of the research process Clearly written with extensive use of examples from previous research to show methodology in action this new text is an invaluable addition to both the theory and method of research in human geography **Research in Geography** ,1955

Research in Human Geography Michael Chisholm, 1971 **The Science of Geography** National Research Council (U.S.). Ad Hoc Committee on Geography, 1965 *Thinking Big Data in Geography* Jim Thatcher, Andrew Shears, Josef Eckert, 2018-04

Thinking Big Data in Geography offers a practical state of the field overview of big data as both a means and an object of research with essays from prominent and emerging scholars such as Rob Kitchin, Renee Sieber, and Mark Graham. Part 1 explores how the advent of geoweb technologies and big data sets has influenced some of geography's major subdisciplines: urban politics and political economy, human environment interactions, and geographic information sciences. Part 2 addresses how the geographic study of big data has implications for other disciplinary fields, notably the digital humanities and the study of social justice. The volume concludes with theoretical applications of the geoweb and big data as they pertain to society as a whole, examining the ways in which user-generated data come into the world and are complicit in its unfolding. The contributors raise caution regarding the use of spatial big data, citing issues of accuracy, surveillance, and privacy.
