Methods in the Social and Health Sciences Research Decisions by Ted Palys and Chris Atchison gives students a thorough

thoughtful and highly readable introduction to the entire research process from start to finish. From its underlying premise that your research questions and objectives rather than any specific method should guide your research, this book discusses each step of the research process from limiting the scope of a literature review to navigating ethical considerations to deciding which methods are best suited for finding answers to specific research questions to how to analyze data and present findings. Readers are encouraged to think deeply about each step of the research process. The book promotes this deliberation by discussing the strengths and limitations of different methods and. Throughout the process the authors provide many examples from their own and student research sharing insights for research decisions arising from that experience. Readers will develop the skills to create solid research questions, perform literature reviews, identify appropriate data sources and methods, conduct research, analyze and interpret data, and translate the resulting knowledge generated from the research process to a wider audience. All core parts of the research process are covered by developing their knowledge and creating confidence in their own decision making skills. After explaining the unique and often complementary strengths of qualitative and quantitative methods, students focus on what methods are best suited for finding answers to the research questions that interest them. Major types of research including experiments, case studies, surveys, quasi experiments, ethnographies, focus groups, participatory action research, and archival studies all receive significant coverage. The text illustrates how these methods are enhanced by integrating them with 21st century technologies and combining them in mixed methods projects. Chapters on constructing a research proposal and disseminating research bookend the process with concrete steps in between to support students designing their own original research projects. Study questions at the end of each chapter encourage students to think critically about the research process and how the choices a researcher makes will broaden or constrain what they can find. By the end of the text, social and health science students will feel confident in undertaking ethical and thoughtful research.

Basic Quantitative Research Methods for Urban Planners Reid Ewing, Keunhyun Park, 2020-02-24. In most planning practice and research, planners work with quantitative data. By summarizing, analyzing, and presenting data, planners create stories and narratives that explain various planning issues. Particularly in the era of big data and data mining, there is a stronger demand in planning practice and research to increase capacity for data driven storytelling. *Basic Quantitative Research Methods for Urban Planners* provides readers with comprehensive knowledge and hands on techniques for a variety of quantitative research studies from descriptive statistics to commonly used inferential statistics. It covers statistical methods from chi square through logistic regression and also quasi experimental studies. At the same time, the book provides fundamental knowledge about research in general such as planning data sources and uses conceptual frameworks and technical writing. The book presents relatively

complex material in the simplest and clearest way possible and through the use of real world planning examples makes the theoretical and abstract content of each chapter as tangible as possible It will be invaluable to students and novice researchers from planning programs intermediate researchers who want to branch out methodologically practicing planners who need to conduct basic analyses with planning data and anyone who consumes the research of others and needs to judge its validity and reliability
