examines and systematises the theoretical dimensions of paradiplomacy the role of subnational governments in international relations Throughout the world subnational governments play an active role in international relations by participating in international trade cultural missions and diplomatic relations with foreign powers These governments including states in the USA and landers in Germany can sometimes even challenge the official foreign policy of their national government These activities which are regularly promoting the subnational government s interests have been labelled as paradiplomacy Through a systematisation of the different approaches in understanding constituent diplomacy the author constructs an integrative theoretical explanatory framework to guide research on regional governments involvement in international affairs The framework is based on a multiple response questionnaire technique MRQ which provides the matrix of possible answers on a set of key questions for paradiplomacy scholarship This comprehensive analysis of the phenomenon of paradiplomacy sheds light on the development of federalism and multi level governance in a new global environment and contributes to the debates on the issue of actorness in contemporary international affairs This book will be of much interest to students of diplomacy federalism governance foreign policy and IR as well as practitioners of diplomacy      **Issues and Methods in**

three volume resource that is a first of its kind developed by the leading publisher of social science research methods books  
and journals This unique multi volume reference set offers readers an all encompassing education in the ways of social  
science researchers Written to be accessible to general readers entries do not require any advanced knowledge or  
experience to understand the purposes and basic principles of any of the methods The Encyclopedia features two major types  
of entries definitions consisting of a paragraph or two provide a quick explanation of a methodological term and topical  
treatments or essays discussing the nature history application example and implication of using a certain method Also  
included are suggested readings and references for future study To help provide a more complete explanation than is often  
achieved within the scope of a single article key terms and concepts appear in SMALL CAPITAL LETTERS to refer readers to  
related terms explained elsewhere In addition to epistemological issues that influence the nature of research questions and  
assumptions The SAGE Encyclopedia of Social Science Research Methods tackles topics not normally viewed as part of social  
science research methodology from philosophical issues such as poststructuralism to advanced statistical techniques In  
covering the full range of qualitative and quantitative data analyses this key reference offers an integrated approach that  
allows the reader to choose the most appropriate and robust techniques to apply to each situation Many entries treat  
traditional topics in a novel way stimulating both interest and new perspectives One example is the entry Econometrics by  
Professor Damodar Gujarati Following a process which many educators preach but seldom practice Gujarati walks the reader  
twice through the research process from economic theory to data and models to analysis once in principle and a second time  
with an example In using the ordinary process of economic research to achieve an extraordinary impact he leaves the reader  
thinking not only about methods and models but also the fundamental purpose of econometrics Topics Covered Analysis of  
Variance Association and Correlation Basic Qualitative Research Basic Statistics Causal Modeling Structural Equations  
Discourse Conversation Analysis Econometrics Epistemology Ethnography Evaluation Event History Analysis Experimental
