Game Sense Richard Lawrence

Light,2013 Game Sense is an exciting and innovative approach to coaching and physical education that places the game at the heart of the session. It encourages the player to develop skills in a realistic context to become more tactically aware to make better decisions and to have more fun. Game Sense is a comprehensive research informed introduction to the Game Sense approach that defines and explores key concepts and essential pedagogical theory and that offers an extensive series of practical examples and plans for using Game Sense in real teaching and coaching situations. The first section of the book helps the reader to understand how learning occurs and how this informs player centred pedagogy. It also explains the relationship between Game Sense and other approaches to Teaching Games for Understanding. The second section of the book demonstrates how the theory can be applied in practice providing a detailed step by step guide to using Game Sense in eleven sports including soccer, basketball, field hockey and softball. No other book explores the Game Sense approach in such depth or combines theory and innovative practical techniques. Game Sense is invaluable reading for all students of physical education or sports coaching, any in-service physical education teacher or any sports coach working with children or young people.

Science and Application of High-Intensity Interval Training Laursen, Paul, Buchheit, Martin,2019 The popularity of high intensity interval training (HIIT) which consists primarily of repeated bursts of high intensity exercise continues to soar because its effectiveness and efficiency have been proven in use by both elite athletes and general fitness enthusiasts. Surprisingly few resources have attempted to explain both the science behind the HIIT movement and its sport specific application to athlete training. That's why Science and Application of High Intensity Interval Training is a must have resource for sport coaches, strength and conditioning professionals, personal trainers and exercise physiologists as well as for researchers and sport scientists who study high intensity interval training.
