Telecommunications Common Carrier Policies United States. Congress. Senate. Committee on Commerce, Science, and Transportation. Subcommittee on Communications, 1977 Sociology as Social Criticism (Routledge Revivals) Tom B. Bottomore, 2012-09-10 First published in 1975 this collection of essays embodies a conception of sociological thought as a critical analysis of social theories and doctrines of social institutions and political regimes of recent social movements They deal in particular with some conservative versions of sociology and with attempts to develop more radical theories they extend the author's previous writings on classes elites and politics and they analyse some of the problems of socialism in the late twentieth century There is a close unity of theme throughout the book in its critical attempt to formulate new intellectual bases for future radical and egalitarian politics It is written with that quiet wisdom and impressive command of sources which readers have come to associate with Professor Bottomore's work **Philosophy and Technology II** Carl Mitcham, Alois Huning, 2012-12-06 Until recently the philosophy and history of science proceeded in a separate way from the philosophy and history of technology and indeed with respect to both science and technology philosophical and historical inquiries were also following their separate ways Now we see in the past quarter century how the philosophy of science has been profoundly influenced by historical studies of the sciences and no longer concerned so single mindedly with the analysis of theory and explanation with the relation between hypotheses and experimental observation Now also we see the traditional historical studies of technology supplemented by philosophical questions and no longer so plainly focussed upon contexts of application on invention and practical engineering and on the mutually stimulating relations between technology and society Further alas the neat division of intellectual labor those clearly drawn distinctions between science and technology between the theoretical and the applied between discovery and justification between internalist and externalist approaches all have become muddled Partly this is due to internal revolutions within the philosophy and history of science the first result being recognition of their mutual relevance Partly however this state of muddle is due to external factors science at the least in the last half century has become so intimately connected with technology and technological developments have created so many new fields of scientific and philosophical inquiry that any critical reflection on scientific and technological endeavors must henceforth take their interaction into account **A Bibliographic Guide to Resources**
