What Makes a Great Exhibition? Paula Marincola, 2007-02-16 For better or worse museums are changing from forbidding bastions of rare art into audience friendly institutions that often specialize in blockbuster exhibitions designed to draw crowds But in the midst of this sea change one largely unanswered question stands out What makes a great exhibition Some of the world's leading curators and art historians try to answer this question here as they examine the elements of a museum exhibition from every angle What Makes a Great Exhibition investigates the challenges facing American and European contemporary art in particular exploring such issues as group exhibitions video

and craft and the ways that architecture influences the nature of the exhibitions under its roof The distinguished contributors address diverse topics including Studio Museum in Harlem director Thelma Golden s examination of ethnically focused exhibitions and Robert Storr director of the 2007 Venice Biennale and formerly of the Museum of Modern Art on the meaning of exhibition and exhibitionmaker A thought provoking volume on the practice of curatorial work and the mission of modern museums What Makes A Great Exhibition will be indispensable reading for all art professionals and scholars working today

Imminent Commons: The Expanded City Alejandro Zaera-Polo,Jeffrey Anderson,2022-02-04 In light of the increasing disengagement between urban and rural areas this book address the interdependency of cities with ecological and technological processes outside the purview of traditional urban planning It compiles a huge amount of essays in regards to the most important topics that cities must address today such as their connection with global data networks ecological cycles of resources which supersede the traditional boundaries of urbanism For this reason it frames investigation of contemporary urbanism on nine imminent commons grouping the urban commons into resources and technologies lead us to the arcane classification of natural resources air water fire and earth the four elements of ancient cosmologies and five basic technological commons based on expanded human capacities sensing communicating moving making and recycling

Essentials Beth Tondreau,2011-06 This book outlines and demonstrates basic layout grid guidelines and rules **In the Bubble** John Thackara,2006-02-17 How to design a world in which we rely less on stuff and more on people We re filling up

the world with technology and devices but we've lost sight of an important question: What is this stuff for? What value does it add to our lives? So asks author John Thackara in his new book *In the Bubble: Designing for a Complex World*. These are tough questions for the pushers of technology to answer. Our economic system is centered on technology so it would be no small matter if tech ceased to be an end in itself in our daily lives. Technology is not going to go away but the time to discuss the end it will serve is before we deploy it, not after. We need to ask what purpose will be served by the broadband communications, smart materials, wearable computing and connected appliances that we're unleashing upon the world. We need to ask what impact all this stuff will have on our daily lives. Who will look after it and how?

In the Bubble is about a world based less on stuff and more on people. Thackara describes a transformation that is taking place now, not in a remote science fiction future. It's not about the schlock of the new but about radical innovation already emerging in daily life. We are regaining respect for what people can do that technology can't. *In the Bubble* describes services designed to help people carry out daily activities in new ways. Many of these services involve technology ranging from body implants to wide-bodied jets. But objects and systems play a supporting role in a people-centered world. The design focus is on services, not things. And new principles, above all lightness, inform the way these services are designed and used. At the heart of *In the Bubble* is a belief informed by a wealth of real-world examples that ethics and responsibility can inform design decisions without impeding social and technical innovation.

Design and Feminism Joan Rothschild, Alethea Cheng, 1999. The distinction between the spaces considered public and private or work and home is becoming more blurred. Our streets, parks, dwellings and tools are designed to a one-size-fits-all standard and the responses of the design community to meet diverse needs have been mixed at best. *Design and Feminism* offers feminist critiques of these inadequate design standards and suggests ideas, projects and programs for change.

Curating Ecologies on Architecture Patricia Coelho, 2024-10-31. From the early 20th century to the present day, architecture exhibitions have embraced different approaches and constructed other modes of action within the discipline. Ranging from canonical experiences centred on archives and collections to more performative and experimental practices, exhibitions have played a pivotal role in disseminating, diffusing and experimenting with architectural culture. *Curating Ecologies on Architecture* offers a contemporary approach to the theme of curatorial practice in architecture and how ecological issues have been addressed in the context of curatorial thinking and exhibition making. It does so by interviewing five architects with a curatorial practice who are contributing to the debates in architecture as well as exploring how to perceive the main challenges of our world's.

Digital Design Theory Helen Armstrong, 2016-06-28. *Digital Design Theory* bridges the gap between the discourse of print design and interactive experience by examining the impact of computation on the field of design. As graphic design moves from the creation of closed static objects to the development of open interactive frameworks, designers seek to understand their own rapidly shifting profession. Helen Armstrong's carefully curated introduction to

groundbreaking primary texts from the 1960s to the present provides the background necessary for an understanding of digital design vocabulary and thought Accessible essays from designers and programmers are by influential figures such as Ladislav Sutnar Bruno Munari Wim Crouwel Sol LeWitt Muriel Cooper Zuzana Licko Rudy VanderLans John Maeda Paola Antonelli Luna Maurer and Keetra Dean Dixon Their topics range from graphic design s fascination with programmatic design to early strivings for an authentic digital aesthetic to the move from object based design and to experience based design Accompanying commentary assesses the relevance of each excerpt to the working and intellectual life of designers
