Never Look a Polar Bear in the Eye Zac Unger, 2013-01-29 In this humorous mix of travelogue and memoir a writer temporarily moves his California family north to Canada's Polar Bear Capital of the World Welcome to Churchill Manitoba Year round human population 943 Yet despite the isolation and the searing cold here at the arctic's edge visitors from around the globe flock to the town every fall driven by a single purpose to see polar bears in the wild Churchill is The Polar Bear Capital of the World And for one unforgettable bear season Zac Unger his wife and his three children moved from Oakland California to make it their temporary home But they soon discovered that it's really the polar bears who are at home in Churchill roaming past the coffee shop on the main drag peering into garbage cans scratching their backs against fence posts and front doorways Where kids in other towns receive admonitions about talking to strangers Churchill schoolchildren get Let's All Be Bear Aware booklets to bring home Lesson number 8 Never explore bad smelling areas Zac Unger takes readers on a spirited and often wildly funny journey to a place as unique as it is remote a place where natives tourists scientists conservationists and the most ferocious predators on the planet converge In the process he becomes embroiled in the controversy surrounding polar bear science and finds out that some of what we've been led to believe about the bears imminent extinction may not be quite the case But mostly what he learns is about human behavior in extreme situations and also why you should never even think of looking a polar bear in the eye

,1979-01-11 **The Emotional Lives of Animals** Marc Bekoff,2024-04-09 A seminal exploration of animal emotion sentience and cognition revised and expanded to incorporate a surge of new science When award winning scientist Marc Bekoff penned the first edition of this book in 2007 he predicted that over time our understanding of animal cognition and emotion would grow richer more accurate and possibly different Since then not only has the field seen an explosion of new and startling research but the popular interest in the subject has grown as well spawning countless podcasts articles and bestselling books Bekoff skillfully blends extraordinary stories of animal joy empathy grief embarrassment anger and love with the latest scientific research confirming the existence of emotions that common sense and experience have long implied Filled with light humor and compassion *The Emotional Lives of Animals* is a clarion call for reassessing both how we view and how we treat animals *Marine Conservation* Bob Earll,2018-10-08 In the last 50 years marine conservation has grown from almost nothing to become a major topic of global activity involving many people and organisations Marine conservation activities have been applied to a huge diversity of species habitats ecosystems and whole seas Many marine conservation actions have focused on human impacts on the marine environment from development and pollution to the impacts of fisheries Whilst science has provided the backbone of thinking on marine conservation perhaps the biggest change over this period has been the use of an ever increasing range of techniques and disciplines to further marine conservation ends Bob Earll explores what marine conservation involves in practice by providing a synthesis of the main developments from the viewpoints of 19 leading practitioners and pioneers who have helped shape its progress and successes Their narratives highlight the diversity and richness of activity and the realities of delivering marine conservation in practice with reference to a host of projects and case studies Many of these narratives demonstrate how innovative conservationists have been often

developing novel approaches to problems where little information and no frameworks exist The case studies described are based on a wide range of European and international projects This book takes an in depth look at the reality of delivering marine conservation in practice where achieving change is often a complicated process with barriers to overcome that have nothing to do with science Marine conservationists will often be working with stakeholders for whom marine conservation is not a priority This book aims to help readers describe and understand those realities and shows that successful and inspirational projects can be delivered against the odds
