Thompson, Irwin R. Donis-González, Tom Rumsey, Farzaneh Khorsandi, Erin DiCaprio, 2023-12-21 About one third of fresh produce harvested worldwide is lost at various points in the distribution system between production and consumption While it is impossible and uneconomical to eliminate these losses completely it is possible to reduce them by at least half and increase food availability The first chapter of this volume describes both proper temperature management practices for perishable commodities and the commercially used methods for cooling fruit vegetables and cut flowers It is written for a person who is initially investigating produce cooling a professional designer who needs design details and an operator who wants a better understanding of practical operation guidelines The chapter contains a complete discussion of design for forced air coolers hydrocoolers and vacuum coolers the most commonly used cooling methods that people with a good background in industrial refrigeration can design The second chapter is an overview of cold storage for perishables It describes the unique issues associated with designing a cold storage for perishables Worker safety and food safety for cooling and storage systems have become important issues for the industry and they are discussed in chapters 3 and 4 The volume concludes with chapter 5 which describes the effects of air temperature and humidity on postharvest quality and temperature and humidity measurement methods **Development and evaluation of iodine biofortification strategies for vegetables** Patrick Lawson, 2014 Iodine is an essential trace element for humans which is not ingested in sufficient quantities in many regions of the world In spite of the wide use of iodized table salt large portions of

the German population are still inadequately supplied with the trace element. Therefore, further efforts are needed to improve the alimentary intake of iodine. The aim of this dissertation was to develop an agronomical biofortification strategy for enriching vegetables with iodine by means of fertilization with iodine salts. Hence, foliar and soil application approaches were implemented and compared using a selection of different vegetable species in order to detect the influence of various environmental application and soil factors affecting the iodine uptake by plants.
