## **Seminaire De Probabilites Xxxvii:**

Séminaire de Probabilités XXXVII Jacques Azéma, Michel Émery, Michel Ledoux, Marc Yor, 2003-11-26 The 37th S minaire de Probabilit s contains A Lejay s advanced course which is a pedagogical introduction to works by T Lyons and others on stochastic integrals and SDEs driven by deterministic rough paths The rest of the volume consists of various articles on topics familiar to regular readers of the S minaires including Brownian motion random environment or scenery PDEs and SDEs random matrices and financial random processes

**Séminaire de Probabilités XXXVI** Jacques Azéma, Michel Émery, Michel Ledoux, Marc Yor, 2004-10-21 The 36th Sminaire de Probabilits contains an advanced course on Logarithmic Sobolev Inequalities by A Guionnet and B Zegarlinski as well as two shorter surveys by L Pastur and N O Connell on the theory of random matrices and their links with stochastic processes The main themes of the other contributions are Logarithmic Sobolev Inequalities Stochastic Calculus Martingale Theory and Filtrations Besides the traditional readership of the Sminaires this volume will be useful to researchers in statistical mechanics and mathematical finance *Paris-Princeton Lectures on Mathematical Finance ...* ,2004

**Tutorials in Mathematical Biosciences** ,2005 Beyond Partial Differential Equations Horst Reinhard Beyer, 2007-04-04 The present volume is self contained and introduces to the treatment of linear and nonlinear quasi linear abstract evolution equations by methods from the theory of strongly continuous semigroups The theoretical part is accessible to graduate students with basic knowledge in functional analysis Only some examples require more specialized knowledge from the spectral theory of linear self adjoint operators in Hilbert spaces Particular stress is on equations of the hyperbolic type since considerably less often treated in the literature Also evolution equations from fundamental physics need to be compatible with the theory of special relativity and therefore are of hyperbolic type Throughout detailed applications are given to hyperbolic partial differential equations occurring in problems of current theoretical physics in particular to Hermitian hyperbolic systems This volume is thus also of interest to readers from theoretical physics

**Mathematical Reviews** ,2004 **Fluctuation Theory for Lévy Processes** Ronald A. Doney, 2007-04-19 Lévy processes i e processes in continuous time with stationary and independent increments are named after Paul Lévy who made the connection with infinitely divisible distributions and described their structure They form a flexible class of models which have been applied to the study of storage processes insurance risk queues turbulence laser cooling and of course finance where the feature that they include examples having heavy tails is particularly important Their sample path behaviour poses a variety of difficult and fascinating problems Such problems and also some related distributional problems are addressed in detail in these notes that reflect the content of the course given by R Doney in St Flour in 2005

Construction of Global Lyapunov Functions Using Radial Basis Functions Peter Giesl, 2007-04-04 The basin of attraction of an equilibrium of an ordinary differential equation can be determined using a Lyapunov function A new method to construct such a Lyapunov function using radial basis functions is presented in this volume intended for

researchers and advanced students from both dynamical systems and radial basis functions Besides an introduction to both areas and a detailed description of the method it contains error estimates and many examples      **Punctured Torus Groups and 2-bridge Knot Groups** ,2007      **Singular Coverings of Toposes** Marta Bunge,Jonathon Funk,2006-08-21 This volume presents a self contained theory of certain singular coverings of toposes including branched coverings This book is distinguished from classical treatments of the subject by its unexpected connection with a topic from functional analysis namely distributions Although primarily aimed at topos theorists this book may also be used as a textbook for advanced graduate courses introducing topos theory with an emphasis on geometric applications
