Electronics, Semiconductors and
Advanced Information & Communications Technologies

Silicone polymers have played an integral role in advancements in computer technology, telecommunications, micro- and macro-electronics, and electrical power distribution. Silicone polymers, elastomers, and adhesives are used in everything from highly sensitive optical and microelectronics to structures, such as composites, containment, and insulation in computers, satellites, cars, and even in electronic devices, components, assemblies, and systems are possible.

Semiconductors

Silicones are fundamental members of the family of silicon materials, with the cyclic siloxane (Si) is primarily used to produce silicon polymers, which is essential for the production of semiconductors. It is used as a dielectric in an insulating layer, protecting the silicon surface from environmental damage. It is also used in a protective layer on the silicon surface, protecting the silicon surface from environmental damage. It is also used in a protective layer on the silicon surface, protecting the silicon surface from environmental damage.
