Lost Architectures:

Lost Architectures Neil Spiller, 2001-03-23 This book stands in opposition to the popular notion that the best architecture is built on compromise Rather Neil Spiller argues the most original and brave products of the architectural mind are often to be found in those projects which for whatever reason never came to fruition *Lost Architectures* presents an array of such projects from the last decades of the twentieth century constituting the unrealised dreams of some of the most inspirational architects working in the period Most of the projects featured here have seldom if ever been published before and some represent the last hand drawn work of their creators before the age of the computer finally came into full force Whilst they do not follow any specific style these projects embody a spirit defined by Spiller as New Romanticism a spirit which combines elements of aesthetic decadence and a certain camp mannerism with a love of angularity and mechanised ritual Some of the architects in question are still in practice with a great deal of high profile built work behind them others have never been recognised as they perhaps should have been In both cases this book is an invaluable resource of information and inspiration for students of architecture as well as for theorists historians and lay readers It provides essential exposure for a range of work of great vitality which might otherwise risk being lost in the course of time *Lost*

Buildings of Britain Simon Thurley, 2004 Accompanying a six part series on Channel Four this volume features six buildings including Glastonbury monastery and the Theatre Royal **The Comics of Chris Ware** David M. Ball, Martha B. Kuhlman, 2010 An assessment of the achievement and aesthetic of one of America's brightest comics innovators

Humanitarian Architecture Esther Charlesworth, 2014-06-27 Never has the demand been so urgent for architects to respond to the design and planning challenges of rebuilding post disaster sites and cities In 2011 more people were displaced by natural disasters 42 million than by wars and armed conflicts And yet the number of architects equipped to deal with rebuilding the aftermath of these floods fires earthquake typhoons and tsunamis is chronically short This book documents and analyses the expanding role for architects in designing projects for communities after the event of a natural disaster The fifteen case studies featured in the body of the book illustrate how architects can use spatial sensibility and integrated problem solving skills to help alleviate both human and natural disasters The cases include Lizzie Babister Department of International Development UK Shigeru Ban Winner of The Pritzker Architecture Prize 2014 Shigeru Ban Architects and Voluntary Architects Network Japan Eric Cesal Disaster Reconstruction and Resiliency Studio and Architecture for Humanity Japan Hsieh Ying Chun Atelier 3 Taiwan Nathaniel Corum Education Outreach and Architecture for Humanity USA Sandra D Urzo Shelter and Settlements and International Federation of the Red Cross and Red Crescent Societies Switzerland Brett Moore World Vision International Australia Michael Murphy MASS Design Group USA David Perkes Gulf Coast Community Design Studio USA Paul Pholeros Healthabitat Australia Patama Roonrakwit Community Architects for Shelter and Environment Thailand Graham Saunders International Federation of Red Cross and Red Crescent Societies Switzerland

Kirtee Shah Ahmedabad Study Action Group India Maggie Stephenson UN HABITAT Haiti Anna Wachtmeister Catholic Organisation for Relief and Redevelopment Aid the Netherlands The interviews and supporting essays show built environment professionals collaborating with post disaster communities as facilitators collaborators and negotiators of land space and shelter rather than as save the world modernists as often portrayed in the design media The goal is social and physical reconstruction as a collaborative process involving a damaged community and its local culture environment and economy not just shelter projects that build houses but leave no economic footprint or longer term community infrastructure What defines and unites the architects interviewed for Humanitarian Architecture is their collective belief that through a consultative process of spatial problem solving the design profession can contribute in a significant way to the complex post disaster challenge of rebuilding a city and its community
