Guidance is given on the appropriate response to various emergencies and circumstances including stroke, acute liver failure, severe burns, extreme pain and delirium. The role of simulation training in the intensive care unit is discussed and detailed attention is devoted to the application of modern techniques for the assessment of vital organs in the critical care setting such as echocardiography and lung ultrasound. An individual chapter focuses on regional anesthesia in intensive care and in addition the book addresses subjects and issues that are frequently neglected. Examples include transfer of the critically ill patient, the role of forgotten electrolytes such as magnesium, the use of non-coumarin anticoagulants and neuropsychological rehabilitation. The book will have broad appeal including for general intensivists, anesthesiologists, acute medicine physicians and medical students attached to acute specialties or preparing for exams in intensive care medicine. Dysregulated Immune Response in the Critically Ill Zsolt Molnar, Marlies Ostermann, Manu Shankar-Hari, 2023-03-11 This book part of the European Society of Intensive Care Medicine ESICM textbook series deals with dysregulated host response a relatively new term introduced by the Sepsis 3 definitions in 2016 In contrast to systemic inflammatory response syndrome SIRS that has been used for nearly 30 years this is a fundamentally new concept which requires some sort of a paradigm shift in the way of thinking of critical care physicians This change obviously requires time and after 5 years time is ripe to summarize the knowledge in the form of a comprehensive book The book is split in 4 sections In the first one the host immune response is explained in 11 chapters followed by the next part summarizing the possible tools for assessment at the bedside The third and the fourth parts focus on the effects of dysregulated immune response on vital organ function and on

the possible ways of immunomodulation Written by internationally acclaimed experts of the field the book is of value for all those intensivists and allied professionals working in ICUs *Critical Care Study Guide* Gerard J. Management of Intensive Care D. Reis Miranda,A. Williams,Ph. Loirat,2012-12-06 Intensive Care Medicine has been continuously growing and expanding culturally technically and geographically Monitoring and instrumentation are continuously improving and more and more hospitals are getting Intensive Care facilities The costs have proportionally increased over the years so that ICUs represent today a major cost for health structures Since the available resources are limited a real need is emerging to set the limits and indications of Intensive Care It is understood that the problem not only involves medical considerations but also ethical and economical aspects of the utmost importance For the first time in Europe this book edited by Reis Miranda and his colleagues tackles systematically the many structural aspects of the European Intensive Care The organisation and financing of health care in the Old Continent is deeply different from the American one and the results and consequent proposals obtained in the USA cannot simply be transferred to this side of the Atlantic Ocean We are extremely pleased to welcome this first European attempt to discuss the Intensive Care problem It lays no claims to giving definite replies in a continuously developing field but it will surely become the basis for future discussions and proposals I am particularly happy that this work has mainly developed within the European Society of Intensive Care whose final target is to ensure a common standard of therapy in our old Europe beyond national differences We warmly congratulate the authors and I am sure that their work will find wide diffusion and consent
