Freeze-Fracture Studies of Membranes Sek Wen Hui, 2018-01-18 This volume is a kind of celebration of the progress of freeze fracture electron microscopy in recent years

Many of the authors are leaders of the advancing front. Instead of offering an instruction manual of how to perform new techniques or a review to recover what has happened in the past in respect fields both which are abundantly available as journal articles and monographs this volume is a collection of personal testimonies as examples of the power of the new freeze fracture technology. Since each chapter also centres around specific biological problem it also serves to illustrate how much the understanding of the problem has been advanced by the new freeze fracture methodology which in most cases is developed by the authors themselves. A characteristic of frontier development is that many chapters are dealing with controversial subjects. The inclusion of these subjects in the volume represents the dynamic nature of the subject as viewed by the authors rather than the final verdicts of the subject matter.

Semiotic Engineering Methods for Scientific Research in HCI Clarisse Sieckenius de Souza, Carla Faria Leitão, 2022-06-01 Semiotic engineering was originally proposed as a semiotic approach to designing user interface languages. Over the years with research done at the Department of Informatics of the Pontifical Catholic University of Rio de Janeiro it evolved into a semiotic theory of human computer interaction HCI. It views HCI as computer mediated communication between designers and users at interaction time. The system speaks for its designers in various types of conversations specified at design time. These conversations communicate the designers understanding of who the users are, what they know, the users want or need to do, in which preferred ways and why. The designers message to users includes even the interactive language in which users will have to communicate back with the system in order to achieve their specific goals. Hence the process is in fact one of communication about communication or metacommunication. Semiotic engineering has two methods to evaluate the quality of metacommunication in HCI: the semiotic inspection method SIM and the communicability evaluation method CEM. Up to now they have been mainly used and discussed in technical contexts focusing on how to detect problems and how to improve the metacommunication of specific systems. In this book Clarisse de Souza and Carla Leitão discuss how SIM and CEM which are

both qualitative methods can also be used in scientific contexts to generate new knowledge about HCI The discussion goes into deep considerations about scientific methodology calling the reader's attention to the essence of qualitative methods in research and the kinds of results they can produce To illustrate their points the authors present an extensive case study with a free open source digital audio editor called Audacity They show how the results obtained with a triangulation of SIM and CEM point at new research avenues not only for semiotic engineering and HCI but also for other areas of computer science such as software engineering and programming Table of Contents Introduction Essence of Semiotic Engineering Semiotic Engineering Methods Case Study with Audacity Lessons Learned with Semiotic Engineering Methods The Near Future of Semiotic Engineering
