Maths Toolbox: Year 4 - Teachers Notes Harcourt Education, 2002      Mathematics for the Life Sciences Erin N.

Bodine, Suzanne Lenhart, Louis J. Gross, 2014-08-17 An accessible undergraduate textbook on the essential math concepts used in the life sciences The life sciences deal with a vast array of problems at different spatial temporal and organizational scales The mathematics necessary to describe model and analyze these problems is similarly diverse incorporating quantitative techniques that are rarely taught in standard undergraduate courses This textbook provides an accessible introduction to these critical mathematical concepts linking them to biological observation and theory while also presenting the computational tools needed to address problems not readily investigated using mathematics alone Proven in the classroom and requiring only a background in high school math Mathematics for the Life Sciences doesn't just focus on calculus as do most other textbooks on the subject It covers deterministic methods and those that incorporate uncertainty problems in discrete and continuous time probability graphing and data analysis matrix modeling difference equations differential equations and much more The book uses MATLAB throughout explaining how to use it write code and connect models to data in examples chosen from across the life sciences Provides undergraduate life science students with a succinct overview of major mathematical concepts that are essential for modern biology Covers all the major quantitative concepts that national reports have identified as the ideal components of an entry level course for life science students Provides good background for the MCAT which now includes data based and statistical reasoning Explicitly links data and math modeling Includes end of chapter homework problems end of unit student projects and select answers to homework problems Uses MATLAB throughout and MATLAB m files with an R supplement are available online Prepares students to read with comprehension the growing quantitative literature across the life sciences A solutions manual for professors and an illustration package is available      *Python for Mathematics* Vincent Knight, 2025-05-29 Python for Mathematics introduces readers to effective methods for doing mathematics using the Python programming language Most programming texts introduce readers to the building blocks of programming and build up to using more sophisticated tools for a specific purpose like doing particular mathematical tasks This is akin to teaching someone how to forge metal so as to make a nail and then slowly working up to using sophisticated power tools so as to actually build something This book does things in a different way by first getting readers to begin using and understanding the tools that are going to be helpful to them as mathematicians and only then moving onto the granular details In this way the practical application of the tools can aid in the understanding of the theory Features Complete with engaging practical exercises Many useful and detailed coding examples Suitable for undergraduates in mathematics and other quantitative sciences Empowers readers to design and create their own Python tools      **Math for Programmers** Paul Orland, 2020-11-30 A gentle introduction to some of the most useful mathematical concepts that should be in your developer toolbox Christopher Haupt New Relic Explore important
