Gaponov-Grekhov, Mikhail I. Rabinovich, 1993-01-11 In the dynamics of mankind one can trace out a path of contemplation about the world leading from early speculations to today's natural sciences The endeavour to understand how nature works has led to the construction still in progress of an abstract building of great complexity To the uninitiated it may look more like a scurrilous sculpture resting on many legs among them such peculiar ones as probability relativity quantum mechanics At times problems with the stability of the building or sculpture arise known facts that won't fit and can no longer be ignored start to undermine the foundations Then new footings are thought of constructed and finally cast In fact the undermining and casting is often done in one step This process has already been repeated many times and will undoubtedly repeat itself again and again At present one recognizable footing under construction goes by the name of chaos theory Physicists seem to like the word chaos When they came to recognize that the air is not just empty space but an obviously indescribable dance of myriads of molecules they called that chaos What else would fit In the course of time the name was simplified to gas Thus the word chaos became free to serve for the next upsetting experience That arose in the context of nonlinear dynamical systems where peculiar motions were detected ones seemingly beyond human comprehension *Nonlinearities in Action* Andrei V.

Waves in Dynamical Systems P.S Landa, 2013-06-29 A rich variety of books devoted to dynamical chaos solitons self organization has appeared in recent years These problems were all considered independently of one another Therefore many of readers of these books do not suspect that the problems discussed are divisions of a great generalizing science the theory of oscillations and waves This science is not some branch of physics or mechanics it is a science in its own right It is in some

sense a meta science In this respect the theory of oscillations and waves is closest to mathematics In this book we call the reader's attention to the present day theory of non linear oscillations and waves Oscillatory and wave processes in the systems of diversified physical natures both periodic and chaotic are considered from a unified point of view The relation between the theory of oscillations and waves non linear dynamics and synergetics is discussed One of the purposes of this book is to convince reader of the necessity of a thorough study popular branches of the theory of oscillations and waves and to show that such science as non linear dynamics synergetics soliton theory and so on are in fact constituent parts of this theory The primary audiences for this book are researchers having to do with oscillatory and wave processes and both students and post graduate students interested in a deep study of the general laws and applications of the theory of oscillations and waves

Science Additionally Mandelstam's philosophy of science is investigated in connection with the ideological attacks that occurred after Mandelstam's death particularly the great mathematician A D Alexandrov's criticism of Mandelstam's operationalism

Synergetic Phenomena in Active Lattices Vladimir I. Nekorkin, M. G. Velarde, 2012-12-06 In recent years there has been growing interest in the study of the nonlinear spatio temporal dynamics of problems appearing in various fields of science and engineering In a wide class of such systems an important place is occupied by active lattice dynamical systems Active lattice systems are e g networks of identical or almost identical interacting units ordered in space The activity of lattices is provided by the activity of units in them that possess energy or matter sources In real 1D 2D or 3D space processes develop by means of various types of connections the simplest being diffusion The uniqueness of lattice systems is that they represent spatially extended systems while having a finite dimensional phase space Therefore active lattice systems are of interest for the study of multidimensional dynamical systems and the theory of nonlinear waves and dissipative structures of extended systems as well The theory of nonlinear waves and dissipative structures of spatially distributed systems demands using theoretical methods and approaches of the qualitative theory of dynamical systems bifurcation theory and numerical methods or computer experiments In other words the investigation of spatio temporal dynamics in active lattice systems demands a multitool synergetic approach which we shall use in this book
