Niessen, Max A. Viergever, 2003-06-30 In the four years of its existence MICCAI has developed into the premier annual conference on medical image computing and computer assisted intervention The single track conference has an interdisciplinary character bringing together researchers from both the natural sciences and various medical disciplines It provides the international forum for developments concerning all aspects of medical image processing and visualization image guided and computer aided techniques and robot technology in medicine The strong interest in MICCAI is confirmed by the large number of submissions we received this year which by far surpassed our expectations The arrival of the shipload of papers just before the deadlines one in the European and the other in the American time zone was a particularly enjoyable experience as was the whole procedure of preparing the scientific programme Both the quantity and quality of the submissions allowed us to compose a volume of high quality papers which we are sure will contribute to the further development of this exciting field of research As for the hard numbers in total 338 submissions were received Next to full papers short communications were solicited for works in progress hardware prototypes and clinical case studies Long papers were reviewed by three or four reviewers and short papers by two or three reviewers The final selection of papers was carried out by the Programme Board Out of the 246 long

papers 36 were accepted for oral presentation and 100 as full posters An additional 75 of the long papers and 47 out of 92 short papers were accepted as short posters

The Acoustics of Crime Harry Hollien, 2013-06-29 There are many reasons for writing a book this one was conceived and developed mainly for two First a new area has emerged from within the forensic sciences that of forensic phonetics As with all new specialties it is necessary to define it identify its boundaries justify its importance and compile a list of the elements it encompasses This book attempts to outline these several relationships Second over the past decade I have become fascinated with forensics in general and the rapidly expanded subarea of forensic phonetics in particular Admittedly the latter field is one that is not as yet sufficiently appreciated and much more needs to be known about its nature and extent Yet I have found it to be a most enjoyable area of study and my attempts to describe its domains were quite informative It was especially interesting to struggle with the interfaces between forensic phonetics and related fields and discover how they overlap Only a few comments will be made about the book's contents here in the preface For one thing they are described in some detail in the first chapter
