Landscape and Quaternary Environmental Change in New Zealand James Shulmeister,2016-12-16 This book brings together an overview of the recent geological history active earth and biological processes and human settlement of New Zealand Topics covered include the very active neotectonic and volcanic setting Mountain geomorphic processes are examined and new ideas about landsliding are highlighted The exceptional sedimentary archives of the Whanganui Basin are also presented As one of two land masses that extend into the southern mid latitudes New Zealand is ideally located to investigate changes in Southern Ocean climate Related to this mountain glaciation in New Zealand is a focus in global climate change debates New Zealand also has a unique biota due to its long isolation and is the last major land mass to be settled by people Advances in DNA technologies have revolutionised our understanding of the histories and processes involved The book provides a comprehensive review of existing work and highlights new ideas and major debates across all these fields *Environmental Change in the Pacific Basin* Patrick D. Nunn,1999-06-09 Talk of the human enhanced greenhouse effect and the ways in which it may affect our lives has made many people more aware of environmental change We have come to realize that the environment is and has always been in a state of continuous change and that we and other organisms have had to adjust our lifestyles accordingly This book focuses on the Pacific Basin a vast region which can be considered a microcosm of the entire surface of the Earth and which has suffered from being marginalized in most accounts of Earth surface processes and phenomena In this book the Pacific Basin includes the Pacific Ocean and Islands and also the Pacific Rim which is divided into the subregions of Antarctica South America Central America North America Beringia East Asia and Australasia Professor Nunn begins by outlining the distant origins of the modern Pacific Basin more than 1000 million years ago then traces its development through the Palaeozoic and Mesozoic into the Cenozoic Era For this time the last 66 million years the history of environmental change becomes progressively better known For the last 1.8 million years the Quaternary period the Earth's climate has oscillated between warm and cool producing synchronous environmental changes throughout most of the Pacific Basin The importance of volcanism and tectonics land level movements for which the Pacific Basin is well known as causes of environmental change is explained in detail The effects of human activities on most Pacific Basin environments began to be registered only during the Holocene the last 12 000 years culminating in the environmental crisis which currently afflicts many parts of this region While the role of humans in altering Pacific Basin environments is discussed in detail considerable attention is also given to the ways in which environmental change caused changes to human lifestyles which had far reaching consequences **FOSSIL RECORD 7** Spencer G. Lucas,Adrian P. Hunt,Asher J. Lichtig,2021-04-01 **Japan** Conrad Totman,2014-01-30 From the outset society in Japan has been shaped by

its environmental context The lush green mountainous archipelago of today with its highly productive lowlands supports a population of more than 127 million people and one of the most advanced economies in the world How has this come about and at what environmental cost Conrad Totman one of the world's foremost scholars on Japanese here provides a comprehensive and detailed account of the country's environmental history from its beginnings to the present day Professor Totman traces the country's development through successive historical phases as early agricultural society based on non intensive forms of cultivation gave way to more intensified forms With each stage came greater utilisation of natural resources but a steady reduction in the richness of the indigenous biosystem By the late seventeenth century the country was well on the way to ecological disaster Yet Japan's isolation in the seventeenth and eighteenth centuries led to an unusually enlightened set of environmental policies and the system of regenerative forestry brought in during the Tokugawa period prevented certain devastation of the country's forests At the end of the nineteenth century however the country began to go to the opposite extreme as industrialisation brought with it a period of unprecedented change Growth and diversification led to a surge in environmental pollution as it became necessary to look beyond the country's domestic natural resources to meet the demand for foodstuffs fossil fuels and the raw materials necessary to an advanced industrial economy The population was particularly badly affected and some of the problems that emerged especially from the 1960s onwards provided important test cases not just for Japan but worldwide What makes the Japanese story particularly instructive is that the country's boundaries are uncommonly clear and the nature timing and extent of external influences on its history are unusually identifiable The Japanese experience therefore not only yields important insights into the processes of environmental history it offers important lessons for the wider environmental history of the planet and for our understanding of current global ecological problems A work of immense erudition and reflecting a lifetime of scholarship Japan an Environmental History will be welcomed by all with an interest in environmental history and the historical development of Japan
