century art The essays are individual case studies dealing with historical interconnections between drawing painting sculpture and book illustration and such diverse fields of science as botany physics geology and evolutionary biology As a whole the book invites readers to question more generally What is art s relationship to science and vice versa At what points do the two disciplines intersect and or complement one another Can science directly inform artistic subjects Is art a useful tool to focus a scientific lens on the past to validate or challenge scientific theory to inspire and encourage scientific inquiry Can it be employed successfully as a means to visualise scientific ends Do artists have the potential to create images and objects whose meanings surpass the laws of science and outlast its theories whose functions are similarly universal and arguably more immediately accessible legible to the public If art like text and data charts has the power to create organise and disseminate information knowledge then why do we continue to privilege scientific research over artistic investigation Would it not be more fruitful and humane to see them as more equitable modes of inquiry Whitaker's Books in Print ,1998
