Framed! Christopher R. Martin,2018-08-06 Christopher R Martin argues that the mainstream news media and the large corporations behind them put the labor movement in a bad light even while avoiding the appearance of bias Martin has found that the news media construct common ground narratives between labor and management positions by reporting on labor relations from a consumer perspective Martin identifies five central storytelling frames using this consumer orientation that repeatedly emerged in the news media coverage of major labor stories in the 1990s the 1991 94 shutdown of the General Motors Willow Run Assembly Plant in Ypsilanti Michigan the 1993 American Airlines flight attendant strike the 1994 95 Major League Baseball strike the 1997 United Parcel Service strike and the 1999 protests against the World Trade Organization s conference in Seattle In Martin s view the news media s consumer take on the labor movement has the effect of submerging issues of citizenship political activity and class relations and elevating issues of consumption and the myth of a class free America Instead of facilitating a public sphere the democratic ideal in which the public can engage in discovery and rational critical debate Martin says news organizations have fostered a consumer sphere in which public discourse and action is defined in terms of consumer interests the impact of strikes lock outs shut downs and protests on the general consumer economy and the price quality and availability of things such as automobiles airline flights and baseball tickets

Television News and Human Rights in the US & UK Shawna M. Brandle, 2015-12-22 Does the CNN Effect exist Political communications scholars have debated the influence of television news coverage on international affairs since television news began especially in relation to the coverage of massive human rights violations These debates have only intensified in the last 20 years as new technologies have changed the nature of news and the news cycle But despite frequent assertion little research into the CNN Effect or whether television coverage of human rights violations causes state action exists Bridging across the disciplines of human right studies comparative politics and communication studies in a way that has not been done this book looks at television news coverage of human rights in the US and UK to answer the question of whether the CNN Effect actually exists Examining the human rights content in television news in the US and UK yields insights to what television news producers and policy makers consider to be human rights and what if anything audiences can learn about human rights from watching television news After reviewing 20 years of footage using three different types of content analyses of American television news broadcasts and two different types of British news broadcasts and comparing those results with human rights rankings and print news coverage of human rights Shawns M Brandle concludes that despite rhetoric from both countries in support of human rights there is not enough coverage of human rights in either country to argue that television media can spur state action on human rights issues More simply the violations will not be televised A welcome and timely book presenting an important examination of human rights coverage on television news
