Hauptman, Jay A. Salpekar, 2018-10-26 Adult neuropsychiatry is now a well established field with numerous reputable references Practitioners who work with children routinely note how references and practitioners knowledgeable in the equivalent work in the pediatric world are rare Child psychiatrists and neurologists frequently work with individuals struggling with these conditions and would strongly benefit from such a reference that incorporates medical work up psychopharmacological recommendations family support recommendations and theoretical pathophysiology Pediatricians and developmental pediatricians often treat children with behavioral and neuropsychiatric sequelae but are not well trained in the neuropsychiatric management of these cases Neuropsychologists and educational psychologists working with children and adults with pediatric onset conditions will also find the text helpful to contextualize their cases better understand the medical evaluation and management and perhaps adjust recommendations that would supplement their own testing methods Finally sub specialists in adult neurology psychiatry and neuropsychiatry often find themselves working with these children by default as there are few pediatric subspecialists who are available to accept them into practice When facing complex neuropsychiatric illness in children many clinicians are stymied because they may have never seen a case like that This text fills the wide gap that currently exists and helps move this field forward The approach utilized in adult neuropsychiatry that is both clear and accessible does not yet have an equivalent in the pediatric realm but there is tremendous interest in its development Children and adolescents with neuropsychiatric conditions are very common and they and their caregivers often struggle to find professionals well educated in this field Ultimately a wide range of clinicians will find this text to be a very helpful resource for diagnosis and management in the spectrum of pediatric neuropsychiatric conditions The case based approach is also unique with respect to neuropsychiatric approaches and the clear cut reader friendly approach of such a format would likely be well received among physicians looking for a resource on this issue Handbook of Pediatric Epilepsy David C. Dredge, 2016-07-10 Epilepsy is the most common neurological problem affecting children and adolescents with an incidence rate of 1-2% Diagnosing epilepsy in children is often complicated by age dependent manifestations which can differ greatly from seizure disorders seen in adults Thus effective treatment and management depends on clinicians to establish an accurate diagnosis and choose appropriate therapy based on the likelihood of clinical benefit Handbook of Pediatric Epilepsy will be a concise overview of seizures in infants children and adolescents including a discussion of common types of seizure disorders treatment options recent drug developments and evidence based disease management guidelines Clinical Paediatric Dietetics Vanessa Shaw, 2020-06-24 Clinical Paediatric Dietetics Fifth Edition continues to provide a very practical approach to dietary management of children with an extensive range of disorders Thoroughly revised to reflect the most recent scientific and medical literature this new edition proves to be an indispensable guide for both acute and

Pediatric Neurology, Part I Olivier Dulac, Maryse Lassonde, Harvey B. Sarnat, 2013-04-24 The child is neither an adult miniature nor an immature human being at each age it expresses specific abilities that optimize adaptation to its environment and development of new acquisitions Diseases in children cover all specialties encountered in adulthood and neurology involves a particularly large area ranging from the brain to the striated muscle the generation and functioning of which require half the genes of the whole genome and a majority of mitochondrial ones Human being nervous system is sensitive to prenatal aggression is particularly immature at birth and development may be affected by a whole range of age dependent disorders distinct from those that occur in adults Even diseases more often encountered in adulthood than childhood may have specific expression in the developing nervous system The course of chronic neurological diseases beginning before adolescence remains distinct from that of adult pathology not only from the cognitive but also motor perspective right into adulthood and a whole area is developing for adult neurologists to care for these children with

persisting neurological diseases when they become adults Just as pediatric neurology evolved as an identified specialty as the volume and complexity of data became too much for the general pediatrician or the adult neurologist to master the discipline has now continued to evolve into so many subspecialties such as epilepsy neuromuscular disease stroke malformations neonatal neurology metabolic diseases etc that the general pediatric neurologist no longer can reasonably possess in depth expertise in all areas particularly in dealing with complex cases Subspecialty expertise thus is provided to some trainees through fellowship programmes following a general pediatric neurology residency and many of these fellowships include training in research Since the infectious context the genetic background and medical practice vary throughout the world this diversity needs to be represented in a pediatric neurology textbook Taken together and although brain malformations H Sarnat P Curatolo 2007 and oncology W Grisold R Soffiatti are covered in detail in other volumes of the same series and therefore only briefly addressed here these considerations justify the number of volumes and the number of authors who contributed from all over the world Experts in the different subspecialties also contributed to design the general framework and contents of the book Special emphasis is given to the developmental aspect and normal development is reminded whenever needed brain muscle and the immune system The course of chronic diseases into adulthood and ethical issues specific to the developing nervous system are also addressed A volume in the Handbook of Clinical Neurology series which has an unparalleled reputation as the world's most comprehensive source of information in neurology International list of contributors including the leading workers in the field Describes the advances which have occurred in clinical neurology and the neurosciences their impact on the understanding of neurological disorders and on patient care
