This book traces the development of scientific conservation and technical art history It takes as its starting point the final years of the nineteenth century which saw the establishment of the first museum laboratory in Berlin and ground breaking international conferences on art history and conservation held in pre World War I Germany It follows the history of conservation and art history until the 1940s when from the ruins of World War II new institutions such as the Istituto Centrale del Restauro emerged which would shape the post war art and conservation world The book will be of interest to scholars working in art history conservation history historiography and history of science and humanities *The Anatomy and Action of the Horse* Lowes D. to gain an understanding of the regional geography of Japan may feel that the structure and content of this book are lacking something. However, it is not the intention of this book to systematically paint a total geographical image of Japan within the context of East Asia. Instead, by focusing on urban systems theory, it might be possible to theorize about the factors related to the changing geography of Japan, such as the growth and decline processes of Japanese urban systems, the strengthening of ties among cities and associated factors, and the expansion of socioeconomic exchanges with cities overseas from a perspective that is different from the conventional approach.
