Plates and 38 Text Illustrations Leonard Johnston Wills,1948 *In the Shadow of the Dinosaurs* Nicholas C. Fraser,Hans-Dieter Sues,1997-08-28 The early Mesozoic period was a critical period in the evolution of life on land when most of today's major groups of terrestrial vertebrates arose and dinosaurs and pterosaurs rose to prominence In recent years this period has received a great deal of attention from palaeontologists and it is now felt that the small vertebrates which lived in the shadows of the first dinosaurs tell us a great deal about the evolution of modern terrestrial ecosystems This book is an attempt to collate all the information on the small vertebrates and features contributions by experts with international reputations in their fields There are chapters on the taxonomy and phylogeny of the key vertebrate groups followed by a section dealing with the most significant fossiliferous assemblages worldwide The final section looks at how faunal turnover at this time is measured and examines the possibility of mass extinctions **Correlation of the Silurian Rocks of the British Isles** Alfred M. Ziegler,R. B. Rickards,W. S. McKerrow,1974-01-01 *Nottingham and Its Region* British Association for the Advancement of Science,1966 Heavy Minerals in Use Maria A. Mange,David T. Wright,2007-09-10 The book is structured thematically encompassing principles processes and products practice and applications Discussion of processes that control heavy mineral assemblages throughout the rock cycle are presented by leading experts whose key note works are followed by specialist case studies Each work also provides details on the geology of the study area techniques and data treatment The high number of contributions represent the collective experience and wisdom of generations of geologists and provide an invaluable source of references to works carried out in many parts of the world Presents a unique and authoritative resource of immediate relevance and practical use to the researcher and applied geologist Contains case studies demonstrating the broad range of applications of heavy minerals in a variety of modern and ancient geological settings and in resource exploration Includes examples of geological problems from employing heavy mineral analysis and establishing criteria that can be applied before deciding to undertake a study *The Paleogeography of the Midlands* Leonard Johnston Wills,1948 **The Geology of the East Midlands** Peter Colley Sylvester-Bradley,Trevor David Ford,1968 Distributed in North America by Humanities Press Inc New York *Quaternary of the Trent* David R. Bridgland,Andy Howard,Mark J. White,Tom S. White,2014-03-31 This volume is an integrated overview and synthesis of available data relating to the Quaternary evolution of the River Trent It provides detailed descriptions of the Pleistocene sedimentary records from the Trent its tributaries and related drainage systems a sedimentary record that spans a period of approximately half a million years and the biostratigraphical and archaeological material preserved therein Significant new data are presented from recently discovered sites of geological and archaeological importance including previously unrecognised fluvial deposits as well as novel analyses such as mathematical modelling of fluvial incision as recorded by the

river terrace deposits In combination with a thorough review of the literature on the Trent these new data have contributed to revised chronostratigraphical and palaeogeographical frameworks for central England and revealed the complexity of the Pleistocene fluvial and glacial records in this region The fragmentary Trent terrace sequence is an important element of wider reconstructions of Pleistocene palaeodrainage in Britain providing a link between the records preserved in the English Midlands and those in East Anglia
