Brasier,D. McIlroy,N. McLoughlin,2017-06-09 This volume in memory of Professor Martin Brasier which has many of his unfinished works summarizes recent progress in some of the hottest topics in palaeobiology including cellular preservation of early microbial life and early evolution of macroscopic animal life encompassing the Ediacara biota The papers focus on how to decipher evidence for early life which requires exceptional preservation employment of state of the art techniques and also an understanding gleaned from Phanerozoic lagerst tte and modern analogues The papers also apply Martin s MOFAOTYOF

principle my oldest fossils are older than your oldest fossils requiring an integrated approach to understanding fossils The adoption of the null hypothesis that all putative traces of life are abiotic until proven otherwise and the consideration of putative fossils within their spatial context characterized the work of Martin Brasier as is well demonstrated by the papers in this volume

Principles of Stratigraphy Michael E. Brookfield, 2008-04-15 Principles of Stratigraphy reaffirms the vital importance of stratigraphy to the earth sciences and introduces the undergraduate to its key elements in a lively and interesting fashion First recent text devoted to stratigraphic principles and applications Contains details of the latest stratigraphic techniques Includes numerous case studies and real world examples An Instructor manual CD ROM for this title is available Please contact our Higher Education team at HigherEducation.wiley.com for more information

Early Miocene Paleobiology in Patagonia Sergio F. Vizcaíno, Richard F. Kay, M. Susana Bargo, 2012-10-11 Coastal exposures of the Santa Cruz Formation in southern Patagonia have been a fertile ground for recovery of Early Miocene vertebrates for more than 100 years This volume presents a comprehensive compilation of important mammalian groups which continue to thrive today It includes the most recent fossil finds as well as important new interpretations based on ten years of fieldwork by the authors A key focus is placed on the paleoclimate and paleoenvironment during the time of deposition in the Middle Miocene Climatic Optimum MMCO between twenty and fifteen million years ago The authors present the first reconstruction of what climatic conditions were like and present important new evidence of the geochronological age habits and community structures of fossil bird and mammal species Academic researchers and graduate students in paleontology paleobiology paleoecology stratigraphy climatology and geochronology will find this a valuable source of information about this fascinating geological formation

The Geology of Sarawak, Brunei and the Western Part of North Borneo P. Liechti, Frank Walton Roe, N. S. Haile, 1960

Key Issues in Petroleum Geology F. John Gregory, Philip Copestake, Julian M. Pearce, 2007 This volume contains a compilation of 17 seminal papers taken from various Geological Society Special Publications and the Journal of the Geological Society on the use and application of stratigraphy in petroleum geology over the last 20 years The volume focuses on case studies in fundamental stratigraphy applied and integrated stratigraphy and alternative methods of stratigraphy The book is introduced with an original scientific and historical review of the subject all papers are set in context with both the benefits of the techniques and some of the shortcomings highlighted By compiling these papers commercial stratigraphers John Gregory Philip Copestake and Julian Pearce have created a volume intended for a wide readership However it is of particular relevance for the training of undergraduate students studying courses on petroleum geology basin development and sequence stratigraphy as well as for all postgraduate students working in petroleum related scientific fields It is also intended as a volume of general use for geoscientists entering the petroleum industry as well as current workers requiring an overview

Geological Evolution of Central Asian Basins and the Western Tien Shan Range Marie-Françoise Brunet, Tom McCann, Edward R. Sobel, 2017-10-10 The geological evolution of Central Asia commenced with

the formation of a complex Precambrian Palaeozoic orogen Cimmerian blocks were then accreted to the southern margin in the Mesozoic leading to tectonic reactivation of older structures and discrete episodes of basin formation The Indian and Arabian blocks collided with Asia in the Cenozoic leading to renewed structural reactivation intracontinental deformation and basin development This complex evolution resulted in the present day setting of an elongated Tien Shan range flanked by large Mesozoic Cenozoic sedimentary basins with smaller intramontane basins distributed within the range This volume presents multidisciplinary results and reviews from research groups in Europe and Central Asia that focus on the western part of the Tien Shan and some of the adjacent large sedimentary basins These works elucidate the Late Palaeozoic Cenozoic tectono sedimentary evolution of the area Emphasis is given to the collision of terranes and continents and the ensuing fault reactivations The impact of climatic changes on sedimentation is also examined

Petroleum Geology of Libya Don Hallett, 2002-02-26 Libya has the largest petroleum reserves of any country in Africa and since production began in 1961 over 20 billion barrels of oil have been produced Libya is scheduled to reach the mid point of depletion of reserves in 2001 and this provides a timely point at which to review the state of petroleum exploration in Libya A large amount of data has been published on the geology of Libya but it is scattered through the literature much of the older data has been superceded and several of the key publications especially those published in Libya are difficult to find This book represents the first attempt to produce a comprehensive synthesis of the petroleum geology of Libya It is based exclusively on published data supplemented by the author's experience gained during ten years work in Libya The aim of the book is to systematically review the plate tectonics structural evolution stratigraphy geochemistry and petroleum systems of Libya and provides valuable new data on fields production and reserves This volume will provide a ready source of reference to individuals and companies who wish to obtain an overview of the petroleum geology of Libya and will save them the laborious task of sifting through hundreds of publications to find the data they require The book includes 148 newly drawn figures

The Geology of Scotland, 4th edition N. H. rather than catalogue all areas and formations Priority is given to the onshore geology encouraging the reader to go into the field and visit some of the world class geology on show in Scotland The chapters are broadly based attempting to integrate the sedimentary and igneous histories and summarize changes in palaeogeography and palaeoenvironments Economic aspects are covered with chapters on Metalliferous Minerals Bulk Resources Coal and Hydrocarbons A new departure is the chapter on aspects of Environmental Geology and sustainability Additionally this publication contains a colour section of 32 plates illustrating aspects of Scottish Geology as well as a coloured geological map of Scotland
