Behrensmeyer, Peter J. Wagner, 2019-12-13 Approximately 99% of all life that has ever existed is extinct Fortunately these
long dead species have left traces of their lives and interactions with other species in the rock record that paleoecologists use
to understand how species and ecosystems have changed over time This record of past life allows us to study the dynamic
nature of the Earth and gives context to current and future ecological challenges This book brings together forty four classic
papers published between 1924 and 1999 that trace the origins and development of paleoecology The articles cross
taxonomic groups habitat types geographic areas and time and have made substantial contributions to our knowledge of the
evolution of life Encompassing the full breadth of paleoecology the book is divided into six parts community and ecosystem
dynamics community reconstruction diversity dynamics paleoenvironmental reconstruction species interaction and
taphonomy Each paper is also introduced by a contemporary expert who gives context and explains its importance to ongoing
paleoecological research A comprehensive introduction to the field Foundations of Paleoecology will be an essential
reference for new students and established paleoecologists alike
