Americans see their country and themselves During the nineteenth century Americans were shocked to learn that the land beneath their feet had once been stalked by terrifying beasts T rex and Brontosaurus ruled the continent North America was home to saber toothed cats and woolly mammoths great herds of camels and hippos and sultry tropical forests now fossilized into massive coal seams How the New World Became Old tells the extraordinary story of how Americans discovered that the New World was not just old it was a place rooted in deep time In this panoramic book Caroline Winterer traces the history of an idea that today lies at the heart of the nation s identity as a place of primordial natural beauty Europeans called America the New World and literal readings of the Bible suggested that Earth was only six thousand years old Winterer takes readers from glacier capped peaks in Yosemite to Alabama slave plantations and canal works in upstate New York describing how naturalists explorers engineers and ordinary Americans unearthed a past they never suspected a history more ancient than anyone ever could have imagined Drawing on archival evidence ranging from unpublished field notes and letters to early stratigraphic diagrams How the New World Became Old reveals how the deep time revolution ushered in profound changes in science literature art and religion and how Americans came to realize that the New World might in fact be the oldest world of all      **The Pictorial Turn** Neal Curtis,2013-09-13 In 1992 W J T Mitchell argued for a pictorial turn in the humanities

registering a renewed interest in and prevalence of pictures and images in what had been understood as an age of simulation or an increasingly extensive and diverse visual culture However in what is often characterized as a society of the spectacle we still do not know exactly what pictures or images are what their relation to language is how they operate on observers and the world how their history is to be understood and what is to be done with or about them In this seminal collection of essays the first to be devoted to the pictorial turn theorists from across the humanities and social sciences representing the disciplines of art history philosophy geography media studies visual studies and anthropology are brought together with a paleontologist and practising artists to consider amongst other things the relation between pictures and images the power of landscape the nature of political images the status of images in the natural sciences the life of images and the pictorial uncanny With these topics in mind picture theory and iconology exceed in scope the objects of visual culture conventionally understood This book was published as a special issue of Culture Theory and Critique      *100 Greatest Science Discoveries of All Time* Kendall Haven,2007-02-28 Brimming with fascinating and fun facts about 100 scientific breakthroughs this

Debus,2022-06-24 During the 2010s science fiction s immortal adversaries King Kong and Godzilla representing our conflicts per Carl Sagan s dream dragons analogy made comebacks in American cinema The blockbuster Kaiju resurged onto the screen depicting these protectors of an Earth plagued by mankind s hubris and folly With Earth s future hanging in the balance their climactic 2021

staging settled a score between the two giant monsters resolving Toho's classic 1963 film King Kong vs Godzilla. As formidable creatures emerging from Time's Tomb on Mother Earth, metaphorical Kong and Godzilla are considered here in light of new millennial environmentalism's stark reality. This book, nostalgic in tone, explores the meaning of Kong and Godzilla as planetary saviors, titanic protectors of a theoretical living Earth, Gaia, defending the globe from a prehistoric plague of adversaries. Earth Sciences History, 2006. *When the Asteroid Hits* Allen A. Debus, 2024-10-04. The incomprehensible notion of a very large chunk of ice or rock from outer space smashing into the Earth has only become mainstream within the past two centuries. Though early writers imagined the utterly fantastic consequences of comet collisions and speculated on the devastation they might wreak, it was not until the 1980s when scientists finally resolved that dinosaurs were extinguished by an asteroid 66 million years ago. This startling announcement captivated the media and tilted the science fiction world, but in reality, history may have been punctuated repeatedly by such events. This book collects and analyzes ideas of asteroid, comet, and planetary impacts with Earth spanning two centuries from the first realization of extinctions in fossil records to the new millennium reflected in scores of sci-fi stories, films, and televised science documentaries. The author examines social and geopolitical fears tied to the prospect of a cosmic-borne catastrophe. Science fiction and speculation are artfully melded.
