**Philosophico-Scientific Problems ... Translated by Henry J. Koren** Pierre Henri van Laer,1953

Philosophico-Scientific Problems P. Henry Van Laer,2011-08-01      Philosophico-scientific Problems Pierre Henri

Laer,1953      **Philosophico-scientific Problems, by P. Henry Van Laer,... Translated by Henry J. Koren,...** Pierre Henri Van Laer,1953      **Foundations of Biophilosophy** Martin Mahner,Mario Bunge,2013-03-14

Over the past three decades the philosophy of biology has emerged from the shadow of the philosophy of physics to become a respectable and thriving philosophical subdiscipline The authors take a fresh look at the life sciences and the philosophy of biology from a strictly realist and emergentist naturalist perspective They outline a unified and science oriented philosophical framework that enables the clarification of many foundational and philosophical issues in biology This book will be of interest both to life scientists and philosophers      **Philosophy in Science** Michael Heller,2011-03-19

The traditional topics of the philosophy of nature space time causality the structure of the universe are overwhelmingly present in our modern scientific theories This book traces the complex paths that discussion of these topics has followed from Plato and Aristotle through Descartes Leibniz Kant and other great thinkers right up to the relativistic cosmologies and the grand unified theories of contemporary science In the light of this historical development it becomes clear that modern science gives us not only a technological power over the world but also a deeper understanding of physical reality In this sense science could be regarded as an heir to the traditional philosophy of nature Moreover the reader will learn why science itself deserves to be the subject of philosophical reflection      *Philosophy of Science* Henry van Laer, Henry J. Koren,2023-07-24

In the first place I want to point out that the term science is not restricted here to the physical sciences as is usually done in English and French scientific literature but is used in a very broad sense namely for science in general as well as each and any special science no matter what its nature be including theology and philosophy If in particular chapters restrictions are made in the use of the term this will always be justified and wherever possible indicated by the addition of a qualifying noun Although the term science is used in a very broad sense a large number of the examples illustrating the text will be borrowed from the physical sciences The reason is first of all that because of his former studies the author is most familiar with this domain but also that the physical sciences often reveal most clearly the typical features of science      **An Introduction to the Science of Metaphysics** Henry J.

Koren,2024-12-31      **African Philosophy in Search of Identity** D A Masolo,2019-08-06

African Philosophy in Search of Identity      *Who Owns the Problem?* Pius Adesanmi,2020-02-01 How may we conceptualize Africa in the driver's seat of her own destiny in the twenty first century How practically may her cultures become the foundation and driving force of her innovation development and growth in the age of the global knowledge economy How may the Africanist disciplines in the humanities the social sciences and the natural sciences be revamped to rise up to these challenges through new imaginaries of intersectional reflection This book assembles lectures given by Pius Adesanmi that address these questions Adesanmi

sought to create an African world of signification in which verbal artistry interpellates performer and audience in a heuristic process of knowledge production The narrative and delivery of his arguments the antiphonal call and response and the aspects of Yoruba oratory and verbal resources all combine with diction and borrowings from Nigerian popular culture to create a distinct African performative mode This mode becomes a form of resistance specifically against the pressure to conform to Western ideals of the packaging standardization and delivery of knowledge Together these short essays preserve the committed and passionate voice of an African writer lost far too soon Adesanmi urges his readers to commit themselves to Africa's cultural agency

*Providence and the Problem of Evil* Richard Swinburne, 1998-08-27 Why does a loving God allow humans to suffer so much This is one of the most difficult problems of religious belief Richard Swinburne gives a careful clear examination of this problem and offers an answer it is because God wants more for us than just pleasure or freedom from suffering Swinburne argues that God wants humans to learn and to love to make the choices which make great differences for good and evil to each other to form our characters in the way we choose above all to be of great use to each other If we are to have all this there will inevitably be suffering for the short period of our lives on Earth But because of the good that God gives to humans in this life and because he makes it possible for us through our choice to share the life of Heaven he does not wrong us if he allows suffering Providence and the Problem of Evil is the final volume of Richard Swinburne's acclaimed tetralogy on Christian doctrine It may be read on its own as a self standing treatment of this eternal philosophical issue Readers who are interested in a unified study of the philosophical foundations of Christian belief will find it now in the tetralogy and in his trilogy on the philosophy of theism

*The Philosophy of Nature* Andrew G. Van Melsen, 2022-04-19 This book offers a fresh approach to the problem of the philosophy of nature Written by a specialist whose competence is unquestionable the book aims at simplicity without sacrificing profundity The important problems raised by modern science with respect to the philosophy of nature are treated in such a way as to be understandable even to those whose knowledge of physical science is rather limited Careful considerations are given to historical factors which have in the past so often led to confusion of philosophy and science and which even in the present time remain a source of conflict between scientist and philosophers

**The Limits of Science** Wenceslao J. Gonzalez, 2016-10-05 The problem of the limits of science is twofold First there is the problem of demarcation i.e. the boundaries or barriers between what is science and what is not science Second there is the problem of the ceiling of scientific activity which leads to the confines of this human enterprise These two faces of the problem of the limits the barriers and the confines of science require a new analysis which is the task of this book The authors take into account the Kantian roots but they are focused on the current stage of the philosophical and methodological analyses of science This vision looks to supersede the Kantian approach in order to reach a richer conception of science

*The Ethical Problem* Paul Carus, 1899

*New Approaches to Scientific Realism* Wenceslao J. Gonzalez, 2020-08-24 Scientific realism is at the core of the contemporary philosophical debate on science This book

analyzes new versions of scientific realism It makes explicit the advantages of scientific realism over alternatives and antagonists contributes to deciding which of the new approaches better meets the descriptive and the prescriptive criteria and expands the philosophico methodological field to take in new topics and disciplines     *The Collected Works of Cassius Jackson Keyser ...: Mathematics as a culture clue, and other essays* Cassius Jackson Keyser,1947     *International Encyclopedia of Comparative Law* Viktor Knapp,1983     *The Cambrian* ,1915     *Treatise on Basic Philosophy* M. Bunge,2012-12-06     *Philosophy, Science and Cinema* Wenceslao J. Gonzalez,2025-03-20 Now that cinema is offline and online the capacity of cinema to relate to philosophy and science has increased In this regard this book seeks to deepen the relationship between philosophy science and cinema in terms of bilaterality This analysis leads to several successive levels of analysis First between philosophy and cinema where the philosophical perspective bifurcates in several directions depending on the philosophical branch used This affects in both directions from the philosophical orientation to the cinematographic activity and from cinema towards the philosophical line used Second the relations between science and cinema also go in both directions Thus they are modulated by the type of scientific research used and by the film genre employed Thus bilaterality is altogether a network of bidirectional relations modulated by various possibilities of analysis
