Wang,2017-04-21 Scientific explanation laws of nature and causation are crucial and frontier issues in the philosophy of science This book studies the complex relationship between the three concepts aiming to achieve a holistic synthesis about explanation laws causation By reviewing Hempel s scientific explanation models and Salmon s three conceptions the epistemic modal and ontic conception the book suggests that laws are essential to explanation and that our understanding of laws will help solve the problems of the latter Concerning the nature of laws this book tackles both the problems of regularity approach and necessitarian approach It also proposes that the ontological order of explanation should be from events or processes to causation then to regularity laws and finally to science system but the epistemological order should be from science system to laws to explanation and causation In addition this book examines the legitimacy of ceteris paribus laws the connection between explanation and reduction the relation between explanation and interpretation and some other issues closely related to explanation laws causation This book will attract scholars and students of philosophy of science natural sciences social sciences etc *Contemporary Political Philosophy: An Anthology* Robert E. Mereology and the Sciences Claudio Calosi,Pierluigi Graziani,2014-06-02 This volume is the first systematic and thorough attempt to investigate the relation and the possible applications of mereology to contemporary science It gathers

contributions from leading scholars in the field and covers a wide range of scientific theories and practices such as physics mathematics chemistry biology computer science and engineering Throughout the volume a variety of foundational issues are investigated both from the formal and the empirical point of view The first section looks at the topic as it applies to physics The section addresses questions of persistence and composition within quantum and relativistic physics and concludes by scrutinizing the possibility to capture continuity of motion as described by our best physical theories within gunky space times The second part tackles mathematics and shows how to provide a foundation for point free geometry of space switching to fuzzy logic The relation between mereological sums and set theoretic suprema is investigated and issues about different mereological perspectives such as classical and natural Mereology are thoroughly discussed The third section in the volume looks at natural science Several questions from biology medicine and chemistry are investigated From the perspective of biology there is an attempt to provide axioms for inferring statements about part hood between two biological entities from statements about their spatial relation From the perspective of chemistry it is argued that classical mereological frameworks are not adequate to capture the practices of chemistry in that they consider neither temporal nor modal parameters The final part introduces computer science and engineering A new formal mereological framework in which an indeterminate relation of part hood is taken as a primitive notion is constructed and then applied to a wide variety of disciplines from robotics to knowledge engineering A formal framework for discretetopology and its applications is developed and finally the importance of mereology for the relatively new science of domain engineering is also discussed
