Philosophy The Physicists:

Revival: Philosophy and the Physicists (1937) Lizzie Susan Stebbing, 2018-05-08 This book is written by a philosopher for other philosophers and for that section of the reading public who buy in large quantities and no doubt devour with great earnestness the popular books written by scientists for their enlightenment We common readers to adapt a phrase from Samuel Johnson are fitted neither to criticize physical theories nor to decide what precisely are their implications We are dependent upon the scientists for an exposition of those developments which so we find them proclaiming have important and far reaching consequences for philosophy Unfortunately however our popular expositors do not always serve us very well The two who are most widely read in this country are Sir Arthur Eddington and Sir James Jeans They are not always reliable guides Their influence has been considerable upon the reading public upon theologians and upon preachers they have even misled philosopher who should have known better Accordingly it has seemed to me to be worth while to examine in some detail the philosophical views that they have put forth and to criticize the grounds upon which these views are based

Philosophy and the Physicists Lizzie Susan Stebbing, 1944 **Philosophy and the Physicists** Lizzie Susan Stebbing, 1937 **The Physicist and the Philosopher** Jimena Canales, 2016-10-04 The explosive debate that transformed our views about time and scientific truth On April 6 1922 in Paris Albert Einstein and Henri Bergson publicly debated the nature of time Einstein considered Bergson's theory of time to be a soft psychological notion irreconcilable with the quantitative realities of physics Bergson who gained fame as a philosopher by arguing that time should not be understood exclusively through the lens of science criticized Einstein's theory of time for being a metaphysics grafted on to science one that ignored the intuitive aspects of time *The Physicist and the Philosopher* tells the remarkable story of how this explosive debate transformed our understanding of time and drove a rift between science and the humanities that persists today Jimena Canales introduces readers to the revolutionary ideas of Einstein and Bergson describes how they dramatically collided in Paris and traces how this clash of worldviews reverberated across the twentieth century She shows how it provoked responses from figures such as Bertrand Russell and Martin Heidegger and carried repercussions for American pragmatism logical positivism phenomenology and quantum mechanics Canales explains how the new technologies of the period such as wristwatches radio and film helped to shape people's conceptions of time and further polarized the public debate She also discusses how Bergson and Einstein toward the end of their lives each reflected on his rival's legacy Bergson during the Nazi occupation of Paris and Einstein in the context of the first hydrogen bomb explosion *The Physicist and the Philosopher* is a magisterial and revealing account that shows how scientific truth was placed on trial in a divided century marked by a new sense of time **Philosophy and the Physicists** L. Susan Stebbing, 2013 **Philosophy and the Physicists. [With a Portrait.]** Lizzie Susan STEBBING, 1944 **Gaither's Dictionary of Scientific Quotations** Carl C. Gaither, Alma E. Cavazos-Gaither, 2008-01-08 Scientists and other keen observers of the natural world sometimes make or

write a statement pertaining to scientific activity that is destined to live on beyond the brief period of time for which it was intended This book serves as a collection of these statements from great philosophers and thought influencers of science past and present It allows the reader quickly to find relevant quotations or citations Organized thematically and indexed alphabetically by author this work makes readily available an unprecedented collection of approximately 18 000 quotations related to a broad range of scientific topics

Susan Stebbing: Philosophical Papers Siobhan Chapman, 2025-01-03 Susan Stebbing 1885 1943 was an important figure in the development of analytic philosophy She was author of the ground breaking work *A Modern Introduction to Logic* 1930 critic of what she saw as the inaccuracies in terminology and method of many of her most celebrated contemporaries and originator of the concept of directional analysis which was foundational to the Cambridge school during the 1930s She was also a leading proponent of public philosophy and in books such as *Philosophy and the Physicists* 1937 and *Thinking to Some Purpose* 1939 she wrote for a general readership exposing the dangers of misleading phrasing and implicit ideologies in the language used by authority figures such as scientists politicians and religious leaders This volume is the first published selection of Stebbing's writings bringing together sixteen papers from across the span of her thinking The papers are grouped thematically into four parts on Logic Science Analysis and Ideology In the Introduction Siobhan Chapman presents an overview of Stebbing's work and an account of the significance of each of the selected papers and extensive notes offer the reader the opportunity to engage with the published works referred to in the papers The volume includes a bibliography of Stebbing's numerous publications

Reflections of a Metaphysical Flaneur Raymond Tallis, 2014-09-11 These essays from one of our most stimulating thinkers showcase Tallis's infectious fascination indeed intoxication with the infinite complexity of human lives and the human condition In the title essay we join Tallis on a stroll around his local park and the intricate passages of his own consciousness as he uses the motif of the walk the amble to occasion a series of meditations on the freedoms that only human beings possess In subsequent essays the flaneur thinks about his brain his relationship to the rest of the animal kingdom his profession of medicine and about the physical world and the claims of physical science to have rendered philosophical reflection obsolete Taken together the essays continue Tallis's mission to elaborate a vision of humanity that rejects religious myths while not succumbing to scientism or any other form of naturalism Written with the author's customary intellectual energy and vigour these essays provoke move and challenge us to think differently about who we are and our place in the material world

Between Rationalism and Empiricism Erhard Scheibe, 2012-12-06 Erhard Scheibe is one of the most outstanding German philosophers of science He has written extensively on all the problems that confront the philosophy of mathematics and physics rationalism versus empiricism the laws of nature and reductionism He has published books on the logical foundations of quantum mechanics and on the reduction of physical theories Little of his work has been translated into English This collection of 38 essays is intended to remedy this omission and to help to make Erhard Scheibe's philosophical ideas better

known to an international audience *The Reality of the Unobservable* E. Agazzi, M. Pauri, 2013-04-17 Observability and Scientific Realism It is commonly thought that the birth of modern natural science was made possible by an intellectual shift from a mainly abstract and speculative conception of the world to a carefully elaborated image based on observations There is some grain of truth in this claim but this grain depends very much on what one takes observation to be In the philosophy of science of our century observation has been practically equated with sense perception This is understandable if we think of the attitude of radical empiricism that inspired Ernst Mach and the philosophers of the Vienna Circle who powerfully influenced our century's philosophy of science However this was not the attitude of the founders of modern science Galileo for example expressed in a famous passage of the *Assayer* the conviction that perceptual features of the world are merely subjective and are produced in the anima by the motion and impacts of unobservable particles that are endowed uniquely with mathematically expressible properties and which are therefore the real features of the world Moreover on other occasions when defending the Copernican theory he explicitly remarked that in admitting that the Sun is static and the Earth turns on its own axis reason must do violence to the sense and that it is thanks to this violence that one can know the true constitution of the universe Reality and the Physicist Bernard D'Espagnat, 1989-01-27 This book investigates the nature of reality from the viewpoint of a physicist **Twentieth-Century Philosophy of Science: A History (Third Edition)** Thomas J. Hickey, 2016-12-21 History of twentieth century philosophy of science opens with an introduction to contemporary philosophy of science as of the beginning of the twenty first century and describes the new specialty of computational philosophy of science Seven chapters describing the philosophies of several major philosophers of science follow this introductory chapter These major philosophers include Ernst Mach and Pierre Duhem Rudolf Carnap and Willard Van Quine Werner Heisenberg Karl Popper Thomas Kuhn and Paul Feyerabend Norwood Russell Hanson and Paul Thagard and Herbert Simon The book concludes with a large bibliography Handbook for the Historiography of Science Mauro L. Condé, Marlon Salomon, 2023-09-30 This book aims to perform a critical and broad assessment of the historiography of science produced from the late nineteenth century to the early twenty first century It presents its main authors concepts ideas conceptions and schools It also analyzes the historical circumstances of the rise of the discipline history of science and the relations of the historiography of science with related areas These chapters do not understand the historiography of science as a mere description or record of the history of science Instead they understand the historiography of science from the epistemological criteria and choices that guided the writing of the history of science in its different contexts In other words more than describing the record of the various possibilities of historiographical approaches to science the chapters carry out an epistemological reflection to assess the bases possibilities scope and limits of different historiographical conceptions authors and traditions that have established the writing of the history of science This book can be conceived as a reference work not only for professional historians and philosophers but also for academics from different backgrounds who are initiating

themselves in the universe of history and philosophy of science be they scientists from different fields or young researchers from different backgrounds who want to start studying the history and philosophy of science

The Physics. Writings on Natural Philosophy (Concise Edition) Aristotle, 2024-04-09 Aristotle's great work that laid the foundations for Galileo Isaac Newton and Albert Einstein's much later discoveries about the natural laws of life and the universe In the philosophical language of Aristotle and the Greeks of Antiquity Physics roughly translates as the order of nature covering what we would now differentiate as philosophy science politics humanities and religion One of Aristotle's great works of which we here present an abridged edition The Physics is an investigation into the nature of being of the world and its place in the universe Although philosophically much broader it provides the foundation for the later work of Galileo and Isaac Newton and prefigures Albert Einstein's breakthrough theories on time space and the motion of stars The FLAME TREE Foundations series features core publications which together have shaped the cultural landscape of the modern world with cutting edge research distilled into pocket guides designed to be both accessible and informative [Oxford Studies in Ancient Philosophy](#)

Entanglement, Information, and the Interpretation of Quantum Mechanics Gregg Jaeger, 2009-06-12 Entanglement was initially thought by some to be an oddity restricted to the realm of thought experiments However Bell's inequality delimiting local behavior and the experimental demonstration of its violation more than 25 years ago made it entirely clear that non local properties of pure quantum states are more than an intellectual curiosity Entanglement and non locality are now understood

to figure prominently in the microphysical world a realm into which technology is rapidly hurtling Information theory is also increasingly recognized by physicists and philosophers as intimately related to the foundations of mechanics The clearest indicator of this relationship is that between quantum information and entanglement To some degree a deep relationship between information and mechanics in the quantum context was already there to be seen upon the introduction by Max Born and Wolfgang Pauli of the idea that the essence of pure quantum states lies in their provision of probabilities regarding the behavior of quantum systems via what has come to be known as the Born rule The significance of the relationship between mechanics and information became even clearer with Leo Szilard's analysis of James Clerk Maxwell's infamous demon thought experiment Here in addition to examining both entanglement and quantum information and their relationship I endeavor to critically assess the influence of the study of these subjects on the interpretation of quantum theory

The Physicist's Conception of Nature Jagdish Mehra, 2012-12-06 The fundamental conceptions of twentieth century physics have profoundly influenced almost every field of modern thought and activity Quantum Theory Relativity and the modern ideas on the Structure of Matter have contributed to a deeper understanding of Nature and they will probably rank in history among the greatest intellectual achievements of all time The purpose of our symposium was to review in historical perspective the current horizons of the major conceptual structures of the physics of this century Professors Abdus Salam and Hendrik Casimir in their remarks at the opening of the symposium have referred to its origin and planning Our original plan was to hold a two week symposium on the different aspects of five principal themes 1 Space Time and Geometry including the structure of the universe and the theory of gravitation 2 Quantum Theory including the development of quantum mechanics and quantum field theory 3 Statistical Description of Nature including the discussion of equilibrium and non equilibrium phenomena and the application of these ideas to the evolution of biological structure 4 The Structure of Matter including the discussion in a unified perspective of atoms molecules nuclei elementary particles and the physics of condensed matter and finally 5 Physical Description and Epistemology including the distinction between classical and quantum descriptions and the epistemological and philosophical problems raised by them
