*Transport in Plants I* M.H. Zimmermann, J.A. Milburn, 2012-12-06 When WILHELM RUHLAND developed his plan for an Encyclopedia of Plant Physiology more than three decades ago biology could still be conveniently subdivided into classical areas Even within plant physiology subdivisions were not too difficult to make and general principles could be covered sufficiently in the two introductory volumes of the Encyclopedia on the physical and chemical basis of cell biology But the situation changed rapidly even during the 12 year publication period of the Encyclopedia 1955 1967 The new molecular direction of genetics and structural research on biopolymers had an integrating effect on all other biological fields including plant physiology and it became increasingly difficult to keep previously distinct areas separated RUHLAND'S overall plan included 18 volumes and about 22 000 pages It covered the entire field of plant physiology in most cases from the very beginning But as each volume appeared it was clear that its content would soon be outdated Concepts of Biology Book 1

ANNALS OF BOTANY June 2007 **Xylem Structure and the Ascent of Sap** M.H. Zimmermann, 2013-06-29 The present

volume Xylem Structure and the Ascent of Sap by M H Zimmermann very appropriately inaugurates the Springer Series in Wood Science an enterprise recently initiated in the belief that wood and related forest products at this time have attained a new importance as renewable resources available in vast quantities The scope of the series is intended to be wide and virtually all aspects of wood science and technology will be considered Topics will include the structure of wood and bark and the chemistry of their various components the physical and mechanical properties of wood its formation and biodegradation the processing of forest products the utilization of the forest biomass and the manufacture of pulp and paper Some of the volumes in this series are intended to be textbooks but most will be monographs concerned with a limited subject area that will be treated in depth The majority will have only one author The books will be written by recognized experts and will reflect the most recent information available It is my hope that they will serve the purpose of drawing attention to wood one of the most remarkable and useful of all natural materials      *Acidic Deposition : State of Science and Technology* ,1991

**Transport in Plants III** C.R. Stocking,U. Heber,2012-12-06 The problems associated with the movement of water and solutes throughout the plant body have intrigued students of plants since Malpighi s conclusions in 1675 and 1679 that nutrient sap flows upward and downward in stems through vessels in both wood and bark Steven Hale s ingenious experiments on the movement of water in plants in 1726 and Hartig s observations of sieve tube exudation in the mid 19th century set the stage for continued intensive studies on long range transport in plants In spite of this interest for more than 200 years in the movement of solutes and water in plants it has only been within the last 20 to 30 years that extensive research effort has been directed toward a critical evaluation of the interactions among the various cellular organelles The important roles played by the exchange of metabolites in the control and regulation of cellular processes is now widely recognized but in most instances poorly understood      **Plant Protoplasts and Genetic Engineering II** Y. P. S. Bajaj,2012-12-06      **Crop Evolution, Adaptation and Yield** L. T. Evans,Lloyd T. Evans,1996-05-02 In this major 1993 work Lloyd Evans provides an integrated view of the domestication adaptation and improvement of crop plants bringing together genetic diversity plant breeding physiology and aspects of agronomy Considerations of yield and maximum yield provide continuity throughout the book Food feed fibre fuel and pharmaceutical crops are all discussed Cereals grain legumes and root crops both temperate and tropical provide many of the examples but pasture plants oilseeds leafy crops fruit trees and others are also considered After the introductory chapter the increasing significance of crop yields to the world s food supply is highlighted The next three chapters consider changes to crop plants over the last ten thousand years including domestication adaptation and improvement Aimed at research workers and advanced students in crop physiology and ecology agronomy and plant breeding this book also reaches conclusions of relevance to those concerned with developmental policy agricultural research and management environmental quality resource depletion and human history      **Plant Physiology** Hans Mohr,Peter Schopfer,2012-12-06 In this comprehensive and stimulating text and reference the authors

have succeeded in combining experimental data with current hypotheses and theories to explain the complex physiological functions of plants. For every student, teacher, and researcher in the plant sciences, it offers a solid basis for an in-depth understanding of the entire subject area underpinning up-to-date research in plant physiology. The authors vividly explain current research by references to experiments they cite, original literature in figures and tables, and at the end of each chapter, list recent references that are relevant for a deeper analysis of the topic. In addition, an abundance of detailed and informative illustrations complement the text.

Target Sites for Herbicide Action R. Kirkwood, 2013-11-21

The development of chemicals to selectively control the growth of weeds has been a fascinating success story which has unfolded largely during the last four decades. The dramatic growth of herbicide research that followed the wartime discoveries of the auxin-type herbicides, phenoxyalkanoic acids, resulted in a whole range of compounds and mixtures which are used to eliminate broad or narrow leaved weeds from agricultural, horticultural, or forestry crops. Today the safe use of this armament of compounds requires our understanding of their mode of action, metabolism, and environmental persistence. The most recently developed herbicides are highly effective inhibitors of specific enzyme systems, and formulation may be an important factor determining their efficient delivery at specific target sites. In this book, the major target sites of herbicide action are discussed in Chapters 1-5, with particular reference to photosynthesis, amino acid, lipid, and carotenoid synthesis, and other primary target sites. The effects of synergists or antagonists as modifiers of herbicide action are described in Chapter 6. The importance of efficient target site delivery as a fundamental factor in herbicide activity and selectivity is generally recognized. Delivery of a potentially lethal dose of active ingredient may depend on a whole range of factors including the efficiency of application, retention, absorption, translocation, immobilization, and detoxification. These aspects are considered in the remaining chapters, with particular reference to the pathways and mechanisms involved in the uptake, translocation, and metabolism of soil and foliage-applied herbicides.

**Transport in Plants II** U. Lüttge, M.G. Pitman, 2012-12-06

As plant physiology increased steadily in the latter half of the 19th century, problems of absorption and transport of water and of mineral nutrients, and problems of the passage of metabolites from one cell to another, were investigated especially in Germany. JUSTUS VON LIEBIG, who was born in Darmstadt in 1803, founded agricultural chemistry and developed the techniques of mineral nutrition in agriculture during the 70 years of his life. The discovery of plasmolysis by NAGEL, 1851; the investigation of permeability problems of artificial membranes by TRAUBE, 1867; and the classical work on osmosis by PFEFFER, 1877, laid the foundations for our understanding of soluble substances and osmosis in cell growth and cell mechanisms. Since living membranes were responsible for controlling both water movement and the substances in solution, permeability became a major topic for investigation and speculation. The problems then discussed under that heading included passive permeation by diffusion, Donnan equilibrium, adjustments, active transport processes, and antagonism between ions. In that era, when organelle

isolation by differential centrifugation was unknown and the electron microscope had not been invented the nature of cell membranes their thickness and their composition were matters for conjecture The nature of cell surface membranes was deduced with remarkable accuracy from the reactions of cells to substances in solution In 1895 OVERTON in U S A published the hypothesis that membranes were probably lipid in nature because of the greater penetration by substances with higher fat solubility
