Phosphodiesterase Inhibitors, 1996-08-16 Non selective inhibitors of cyclic nucleotide phosphodiesterase PDE such as theophylline have been used extensively since 1958 In the decade of the 70s various PDE isoenzymes were defined which led to the development of the second generation of PDE inhibitors Currently a variety of these new inhibitors are under test as potential anti inflammatory drugs During the past five years molecular biology has revealed a superfamily of these phosphodiesterase isoenzymes This book summarizes the present state of knowledge as well as giving a comprehensive description of the compounds available It will be invaluable for everyone who wants to choose the most suitable PDE inhibitor for their research or who is dealing with such drugs in a clinical setting Utilizes actual testing and research of new PDE inhibitors Valuable for researchers and students alike

Novel Cytokine Inhibitors G. A. Higgs, Brian Henderson (Professor), 2000 Cytokines have become established as key mediators of the signs and symptoms of inflammatory diseases such as arthritis dermatitis asthma and multiple sclerosis Furthermore they are involved in the cascade of events leading to cardiovascular shock and are major regulators of the function of immune cells This book reviews recent advances in the development of new anti inflammatory drugs It addresses different therapeutic intervention possibilities for new drugs such as the cellular source of cytokines specific receptors which induce cytokine synthesis intracellular regulators of cytokine gene induction and expression secretion and activation of cytokines cytokine receptors and signalling pathways from these receptors Accordingly experts were drawn from different backgrounds including academic research institutes the pharmaceutical industry and clinical pharmacology In each area the opportunities for drug development are highlighted and where possible clinical data is reviewed
