Phosphors And Phosphorus In Early Danish Natural Philosophy:

Phosphors and Phosphorus in Early Danish Natural Philosophy Helge Kragh, 2003 **Leibniz's Correspondence in Science, Technology and Medicine (1676 -1701)** James O'Hara, 2024-07-29 Leibniz's correspondence from his years spent in Paris 1672-1676 reflects his growth to mathematical maturity whereas that from the years 1676-1701 reveals his growth to maturity in science, technology and medicine in the course of which more than 2000 letters were exchanged with more than 200 correspondents. The remaining years until his death in 1716 witnessed above all the appearance of his major philosophical works. The focus of the present work is Leibniz's middle period and the core themes and core texts from his multilingual correspondence are presented in English from the following subject areas: mathematics, natural philosophy, physics and cosmology, power technology including mining and transport engineering and engineering science projects, scientific technological and economic projects, alchemy and chemistry, geology, biology and medicine. *Daniel Frederik Eschricht (1798-1863), Peter Wilhelm Lund (1801-1880)* C. Barker Jørgensen, 2005 Thomas Bartholin Jesper Brandt Andersen, 2025-08-22 The Danish physician and anatomist Thomas Bartholin 1616-1680 was one of the most diligent communicators of scientific knowledge of his time. He is famous for his discovery and naming of the lymph vessels, for his editions of Europe's most widely used anatomy book in the 17th century and for being the founder and editor of the world's first medical journal. Bartholin published more than 80 books. Most of them were about anatomy and medicine, but he also wrote about unicorns, comets and light emitted by living organisms. His extensive correspondence with physicians and scholars constitutes a scientific and cultural treasure. As professor of anatomy and medicine for more than 30 years and dean of the medical faculty, Bartholin was the main force behind the flourishing of medical studies at the University of Copenhagen. He was a teacher and inspirer of the anatomist, geologist and theologian Niels Stensen 1638-1686 and crucial to Stensen's groundbreaking scientific career. This first biography of Thomas Bartholin in English presents his life and achievements through primary sources. *Iron and Steel in Ancient Times* Vagn Fabritius Buchwald, 2005 *Fireworks* Simon Werrett, 2010-05 Fireworks are synonymous with celebration in the twenty-first century. But pyrotechnics in the form of rockets, crackers, wheels and bombs have exploded in sparks and noise to delight audiences in Europe ever since the Renaissance. Here Simon Werrett shows that far from being only a means of entertainment, fireworks helped foster advances in natural philosophy, chemistry, mathematics and many other branches of the sciences. Fireworks brings to vibrant life the many artful practices of pyrotechnicians as well as the elegant compositions of the architects, poets, painters and musicians they inspired. At the same time it uncovers the dynamic relationships that developed between the many artists and scientists who produced pyrotechnics. In so doing, the book demonstrates the critical role that pyrotechnics played in the development of physics, astronomy, chemistry and physiology, meteorology and electrical science. Richly illustrated and drawing on a wide range of new sources, *Fireworks* takes readers back to a world where pyrotechnics were both divine and magical and reveals

for the first time their vital contribution to the modernization of European ideas Peter Oluf Brøndsted (1780-1842) Bodil Bundgaard Rasmussen, 2008 **Science in Denmark** Helge Kragh, 2008 Although Denmark a small country on the European periphery has only made a modest contribution to decisive progress in scientific research on the international arena there have nevertheless been numerous significant Danish contributions and naturally this present work describes these high points While the high points are represented by scientists like Tycho Brahe H C rsted and Niels Bohr this publication distances itself from prevailing heroic presentations by putting weight on the dependence of these scientists on a wide ranging professional network as well as close contacts to private patrons the state and other sponsors Even though splendid pinnacles are also to be found the flat landscape is perhaps more representative of Danish natural science history In Denmark the natural sciences as also applies to other sciences and culture in general have developed mainly through the reception of and adaptation to science from abroad Reception history has therefore been given a prominent place in the work Institutions and organisations history is another area that is given high priority just as great weight has been laid on the material economic and cultural framework under which research has always functioned Although Danish natural science researchers have nearly always emphasised the importance of international cooperation there are many national aspects of a social political and cultural type which have had significant influence on the scientific practice in Denmark The present work is documented in such a way that it also makes sense to write the international scientists history in a national context and thereby placing the work solidly in a new and fast growing scientific historic genre **Topographical Studies in the Gåbla Plain** Poul Jørgen Riis, 2004 Cardanus 6: Naturspiele - Beiträge zu einem naturhistorischen Konzept der Frühen Neuzeit Marie-Theres Federhofer, 2006 *Niels Stensen.
