Photography in Archaeological Research Elmer Harp, 1975 A Practical Guide to Archaeological Photography
Carol L. Howell, Warren Blanc, 1992 **Photography in Archaeological Research** Elmer Harp Jr, 1975-01-31

Contemporary archaeology is increasingly reliant upon photography as a working tool and as a medium for communicating the results of field research. The chapters in this book provide detailed practical advice and information on photography in the field from the air underwater and in the lab From Photography to 3D Models and Beyond Donald H Sanders, 2023-12-14

From Photography to 3D Models and Beyond visualizations in archaeology explores the history of visual technology and archaeology and outlines how the introduction of interactive 3D computer modelling to the discipline parallels very closely the earlier integration of photography into archaeological fieldwork. The incredible potential of interactive 3D computer graphics to provide new insight into cultural change ancient settlement development building function and behavior make virtual heritage a must use approach but one that has not been fully grasped. This volume brings together for the first time several key aspects of the history of archaeology how and where photographs became an indispensable part of excavations when and for what purposes virtual reality began a similar journey into the field team's arsenal of documentation publication and visualization tools how the common trajectory of both technologies provides clues for why virtual reality has not yet become as commonplace as photography for archaeological research teaching and data dissemination and how new methods and technologies are poised to revolutionize our understanding of the past.

Archaeology from Historical Aerial and Satellite Archives William S. Hanson, Ioana A. Oltean, 2012-11-12

Historical archives of vertical photographs and satellite images acquired for other purposes mainly declassified military reconnaissance offer considerable potential for archaeological and historical landscape research. They provide a unique insight into the character of the landscape as it was over half a century ago before the destructive impact of later 20th century development and intensive land use. They provide a high quality photographic record not merely of the landscape at that time but offer the prospect of the better survival of remains reflecting its earlier history whether manifest as earthworks cropmarks or soilmarks. These various sources of imagery also provide an opportunity to examine from the air areas of Europe and beyond whose skies are still not open to traditional archaeological aerial reconnaissance. Tens of millions of such images are held in archives around the world but their research potential goes very largely untapped. A primary aim of this volume is to draw to wider attention the existence scope and potential access to historical archival aerial and satellite photographs in order to encourage their use in a range of archaeological and landscape research. By drawing attention to this massive archival resource providing examples of its successful application to archaeological landscape questions and offering advice how to access and utilise the resource the volume seeks to bring this material to wider attention demonstrate its huge potential for archaeology encourage its further use and stimulate a new approach to archaeological survey and the study of landscape.
