In view of the rapid growth in both experimental and theoretical studies of multi photon processes and multi photon spectroscopy of atoms ions and molecules in chemistry physics biology materials science etc it is desirable to publish an advanced series of volumes containing review papers that can be read not only by active researchers in these areas but also by those who are not experts but who intend to enter the field The present series aims to serve this purpose Each review article is written in a self contained manner by the expert s in the area so that the reader can grasp the knowledge without too much preparation **Laser Experiments for Chemistry and Physics** Robert N. Compton, Michael A.

Duncan, 2015-11-13 Lasers are employed throughout science and technology in fundamental research the remote sensing of atmospheric gases or pollutants communications medical diagnostics and therapies and the manufacturing of microelectronic devices Understanding the principles of their operation which underlie all of these areas is essential for a modern scientific education This text introduces the characteristics and operation of lasers through laboratory experiments designed for the undergraduate curricula in Chemistry and Physics Introductory chapters describe the properties of light the history of laser invention the atomic molecular and optical principles behind how lasers work and the kinds of lasers available today Other chapters include the basic theory of spectroscopy and computational chemistry used to interpret laser experiments Experiments range from simple in class demonstrations to more elaborate configurations for advanced students Each chapter has historical and theoretical background as well as options suggested for variations on the prescribed experiments The text will be useful for undergraduates students in advanced lab classes for instructors designing these classes or for graduate students beginning a career in laser science Physical Chemistry Robert G. Mortimer, 2000 Includes developments in the theories of chemical reaction kinetics and molecular quantum mechanics as well as in the experimental study of extremely rapid chemical reactions It proceeds from fundamental principles and shows how the consequences of these principles and postulates apply to the chemical and physical phenomena being studied **National Library of Medicine Current**
