**Vertical-Cavity Surface-Emitting Lasers** Carl W.

Wilmsen, Henryk Temkin, Larry A. Coldren, 2001-11-12 One of the key advances in photonic technology in recent years is the development of vertical cavity surface emitting lasers or VCSELs. These devices have a huge range of potential applications in areas such as communications, printing and optical switching. This book, first published in 1999, provides a clear insight into the physics of VCSELs as well as describing details of their fabrication and applications. All of the book's contributors are at the forefront of VCSEL research and development. Together they provide complete and coherent coverage of the current state of the art. The opening chapters cover VCSEL design, emission from microcavities, growth, fabrication and characterization. These are followed by chapters on long and short wavelength VCSELs, optical data links and free space optical processing. The book will be of great interest to graduate students and researchers in electrical engineering, applied physics and materials science. It will also be an excellent reference volume for practising engineers in the photonics industry.

*Nonlinear Fiber Optics* Govind P. Agrawal, 2013-10-22 The field of nonlinear fiber optics has grown substantially since the First Edition of *Nonlinear Fiber Optics* published in 1989. Like the First Edition, this Second Edition is a comprehensive tutorial and up to date account of nonlinear optical phenomena in fiber optics. It synthesizes widely scattered research material and presents it in an accessible manner for students and researchers already engaged in or wishing to enter the field of nonlinear fiber optics. Particular attention is paid to the importance of nonlinear effects in the design of optical fiber communication systems. This is a completely new book containing either new sections or major revisions in every chapter. Major changes in Soliton based Communication Systems, New section on Photonic Switching, New section on the Nonlinear Fiber loop Mirror, Section on Second harmonic Generation will be expanded to include new research material. Two new chapters have been added on Fiber Amplifiers and Fiber Lasers, two major research areas which have grown significantly during the last 4-5 years. All references have been completely updated.
