## **Phylogeography And Systematics Of The Slender Mouse Opossum *Marmosops* (Marsupialia, Didelphidae):**

*Phylogeography and Systematics of the Slender Mouse Opossum *Marmosops* (Marsupialia, Didelphidae)* Meika A. Mustrangi, James L. Patton, 1997 This monograph details molecular DNA sequence and morphological variation of slender mouse opossums of the genus *Marmosops* a diverse but biologically poorly known group of insectivorous marsupials of the neotropical wet forests Emphasis is placed on taxa of the Atlantic rainforest of coastal Brazil with comparisons made to those of Amazonia Lineages of these opossums are quite old likely dating from the late Tertiary and the actual number of species in the genus is considerably higher than presently believed Both of these findings are important to issues of measurement and management of biodiversity in threatened ecosystems *Mammals of the Neotropics, Volume 3* John F. Eisenberg, Kent H. Redford, 1989 This volume provides a survey and synthesis of current knowledge of the more than 650 species of land and marine mammals found in Ecuador Peru Bolivia and Brazil as well as information on the mammalian fossil record current biodiversity and biogeography of this region Chapters present up to date taxonomic information ecological and behavioral characteristics conservation status and distribution maps for most species Copyright Libri GmbH All rights reserved

**Evolution and Systematics of the Atlantic Tree Rats, Genus *Phyllomys* (Rodentia, Echimyidae), With Description of Two New Species** Yuri L. R. Leite, 2003-10-20 This study focuses on the Atlantic Forest tree rats of the genus *Phyllomys* Rodentia Echimyidae one of the most poorly understood mammal genera inhabiting the coastal rain forests Brazil the most threatened lowland tropical forest in the world The author summarizes their distribution ecology and evolution using a combination of morphological and molecular analyses describes two new species and provides the first systematic revision of the genus which was originally described in 1839 *Opossums* Robert S. Voss, Sharon A. Jansa, 2021-03-09 The definitive volume on opossums a group of ecologically and scientifically important mammals covering natural history evolution behavior and biogeography Opossums are the most diverse and ecologically important group of New World marsupials although only the Virginia opossum is familiar to North American residents In fact many species of opossums are found in Neotropical rainforests savannas and other habitats where they are key participants in food webs and other ecological relationships One species the short tail opossum *Monodelphis domestica* has recently become a model organism for biomedical researchers Eclipsed in the public imagination by their Australian relatives opossums remained for many years a somewhat obscure group of interest primarily to taxonomists and students of mammalian reproduction While thousands of scientific articles have appeared in recent years on opossum systematics morphology behavior physiology genetics and ecology this important but widely scattered literature has never been effectively summarized until now In *Opossums* the first book length treatment of these fascinating organisms recognized authorities Robert S Voss and Sharon A Jansa synthesize a wide range of available information about the diversity comparative biology and natural history of the opossum Peering into every biological facet of the lives of these long neglected mammals the volume includes introductory

chapters explaining the paleontological and biogeographic context for opossum evolution an overview of the extant fauna which includes over 100 species in 18 genera a section devoted to opossum phenotypes morphology physiology and behavior detailed information on opossum natural history including habitats diets predators and parasites in depth and novel interpretations of opossums adaptive radiation in a phylogenetic context Intended for undergraduate biology majors graduate students and research professionals this coherent and original portrait of opossums will be of particular interest to mammalogists evolutionary biologists and Neotropical field biologists as well as biomedical researchers working with *Monodelphis domestica* as a model organism      **Predators with Pouches** Menna Jones, Mike Archer, Chris

Dickman, 2003-04-30 *Predators with Pouches* provides a unique synthesis of current knowledge of the world's carnivorous marsupials from Patagonia to New Guinea and North America to Tasmania Written by 63 experts in each field the book covers a comprehensive range of disciplines including evolution and systematics reproductive biology physiology ecology behaviour and conservation *Predators with Pouches* reveals the relationships between the American didelphids and the Australian dasyurids and explores the role of the marsupial fauna in the mammal community It introduces the geologically oldest marsupials from the Americas and examines the fall from former diversity of the larger marsupial carnivores and their convergent evolution with placental forms The book covers all aspects of carnivorous marsupials including interesting features of life history their unique reproduction the physiological basis for early senescence in semelparous dasyurids sex ratio variation and juvenile dispersal It looks at gradients in nutrition from omnivory to insectivory to carnivory as well as distributional ecology social structure and conservation dilemmas      *Phylogeography of Marmosops (Marsupialia, Didelphidae) in the Atlantic Forest in Brazil, and the Phylogenetic Relationships of the Atlantic Forest and Amazonian Species in the Genus Meika* Alessandra Mustrangi, 1995      *Bones, Clones, and Biomes* Bruce D. Patterson, Leonora P.

Costa, 2024-05-31 As explorers and scientists have known for decades the Neotropics harbor a fantastic array of our planet's mammalian diversity from capybaras and capuchins to maned wolves and mouse opossums to sloths and sakis This biological bounty can be attributed partly to the striking diversity of Neotropical landscapes and climates and partly to a series of continental connections that permitted intermittent faunal exchanges with Africa Antarctica Australia and North America Thus to comprehend the development of modern Neotropical mammal faunas requires not only mastery of the Neotropics substantial diversity but also knowledge of mammalian lineages and landscapes dating back to the Mesozoic *Bones Clones and Biomes* offers just that an exploration of the development and relationships of the modern mammal fauna through a series of studies that encompass the last 100 million years and both Central and South America This work serves as a complement to more taxonomically driven works providing for readers the long geologic and biogeographic contexts that undergird the abundance and diversity of Neotropical mammals Rather than documenting diversity or distribution this collection traverses the patterns that the distributions and relationships across mammal species convey bringing together for

the first time geology paleobiology systematics mammalogy and biogeography Of critical importance is the book s utility for current conservation and management programs part of a rapidly rising conservation paleobiology initiative Ecosystems Biodiversity Oscar Grillo,Gianfranco Venora,2011-12-16 Ecosystems can be considered as dynamic and interactive clusters made up of plants animals and micro organism communities Inevitably mankind is an integral part of each ecosystem and as such enjoys all its provided benefits Driven by the increasing necessity to preserve the ecosystem productivity several ecological studies have been conducted in the last few years highlighting the current state in which our planet is and focusing on future perspectives This book contains comprehensive overviews and original studies focused on hazard analysis and evaluation of ecological variables affecting species diversity richness and distribution in order to identify the best management strategies to face and solve the conservation problems Mammal Species of the World Don E. Wilson,DeeAnn M. Reeder,2005 This indispensable reference work belongs in public and academic libraries throughout the world and on the shelf of every biologist who works with mammals **Mammalogy** Terry A. Vaughan,James M. Ryan,Nicholas J. Czaplewski,2013-12-16 Mammalogy is the study of mammals from the diverse biological viewpoints of structure function evolutionary history behavior ecology classification and economics Thoroughly updated the Sixth Edition of Mammalogy explains and clarifies the subject as a unified whole The text begins by defining mammals and summarizing their origins It moves on to discuss the orders and families of mammals with comprehensive coverage on the fossil history current distribution morphological characteristics and basic behavior and ecology of each family of mammals The third part of the text progresses to discuss special topics such as mammalian echolocation physiology behavior ecology and zoogeography The text concludes with two additional chapters previously available online that cover mammalian domestication and mammalian disease and zoonoses Mammalian Diversification Eileen A. Lacey,Philip Myers,2005 Fourteen chapters by colleagues and former students celebrating the career of James L Patton the emeritus curator of mammals at the Museum of Vertebrate Zoology All the papers deal with mammalian evolution **Tropical Forest Remnants** William F. Laurance,Richard O. Bierregaard,1997-06-21 We live in an increasingly fragmented world with islands of natural habitat cast adrift in a sea of cleared burned logged polluted and otherwise altered lands Nowhere are fragmentation and its devastating effects more evident than in the tropical forests By the year 2000 more than half of these forests will have been cut causing increased soil erosion watershed destabilization climate degradation and extinction of as many as 600 000 species Tropical Forest Remnants provides the best information available to help us understand manage and conserve the remaining fragments Covering geographic areas from Southeast Asia and Australia to Madagascar and the New World this volume summarizes what is known about the ecology management restoration socioeconomics and conservation of fragmented forests Thirty three papers present results of recent research as well as updates from decades long projects in progress Two final chapters synthesize the state of research on tropical forest fragmentation and identify key priorities for future work
