The Sanitarian, 1897 **The Sanitarian** Agrippa Nelson Bell, 1897 **The Science of Life** John Arthur Thomson, 1899

Victorian Popularizers of Science Bernard Lightman, 2009-10-15 The ideas of Charles Darwin and his fellow Victorian scientists have had an abiding effect on the modern world. But at the time *The Origin of Species* was published in 1859, the British public looked not to practicing scientists but to a growing group of professional writers and journalists to interpret the larger meaning of scientific theories in terms they could understand and in ways they could appreciate. *Victorian Popularizers of Science* focuses on this important group of men and women who wrote about science for a general audience in the second half of the nineteenth century. Bernard Lightman examines more than thirty of the most prolific, influential, and interesting popularizers of the day, investigating the dramatic lecturing techniques, vivid illustrations, and accessible literary styles they used to communicate with their audience. By focusing on a forgotten coterie of science writers, their publishers, and their public, Lightman offers new insights into the role of women in scientific inquiry, the market for scientific knowledge, tensions between religion and science, and the complexities of scientific authority in nineteenth-century Britain.

Pioneers of Science Sir Oliver Lodge, 1960 *The Routledge Research Companion to Nineteenth-Century British Literature and Science* John Holmes, Sharon Ruston, 2017-05-18 Tracing the continuities and trends in the complex relationship between literature and science in the long nineteenth century, this companion provides scholars with a comprehensive, authoritative, and up-to-date foundation for research in this field. In intellectual, material, and social terms, the transformation undergone by Western culture over the period was unprecedented. Many of these changes were grounded in the growth of science. Yet science was not a cultural monolith then any more than it is now, and its development was shaped by competing world views. To cover the full range of literary engagements with science in the nineteenth century, this companion consists of twenty-seven chapters by experts in the field, which explore crucial social and intellectual contexts for the interactions between literature and science, how science affected different genres of writing, and the importance of individual scientific disciplines and concepts within literary culture. Each chapter has its own extensive bibliography. The volume as a whole is rounded out with a synoptic introduction by the editors and an afterword by the eminent historian of nineteenth-century science, Bernard Lightman.

Progress of Science in the Century John Arthur Thomson, 1903

The University Magazine and Free Review, 1897 Scientific Pollyannaism Oksana Yakushko, 2019-06-24 This book argues that the story of the orphan girl Pollyanna, namely her strategy of playing the glad

games to manage loss abuse and social prejudice serves as a framework for critiquing historical forms of Western scientific Pollyannaism The author examines Pollyannaism as it relates to the sciences demonstrating how the approach has been used throughout modern Western history to enforce happiness and to criticize negative human emotional states These efforts carried out by scientists and popularized as scientific focus on negating the role of the environment and on promoting varied forms of emotional control Ultimately the book emphasizes strategies used to compel individuals into becoming Pollyannas about science itself

The Science of Astrobiology Julian Chela-Flores, 2011-07-28 Since the publication of *The New Science of Astrobiology* in the year 2001 the first edition of the present book two significant events have taken place raising the subject from the beginning of the present century to its present maturity Firstly in 2001 the Galileo Mission still had two years to complete its task which turned out to be an outstanding survey of the Jovian system especially of its intriguing satellite Europa Secondly the Cassini Huygens Mission was still on its way to Saturn Its present success has surpassed all expectations of ESA and NASA Astrobiologists still did not know that Titan was the fifth body in the Solar System that possibly contained a water ocean including the Earth and the three Galilean satellites other than Io For these reasons the book includes overviews of the evolutionary and molecular biology that are necessary There is a discussion of other sectors of culture that are the natural frontiers of astrobiology especially the humanities
