Semantics Of Prepositions From Mental Processing To Natural Language Processing:

The Semantics of Prepositions Michel Aurnague & Laure Vieu, 1993 The majority of the papers in this volume were presented at a workshop on the semantics of prepositions held at the Institut für Angewandte Informationsforschung in February 1990 The broader topic is the conceptualization of space The papers bring together different approaches to the mental process of interpreting prepositions in particular the computational processing of prepositions as predications of different cognitive domains While no one presentation can claim to be exhaustive it is hoped that the insights contained will inspire future discussions within cognitive linguistics **English Prepositions Explained** Seth Lindstromberg, 2010 This completely revised and expanded edition of English Prepositions Explained EPE originally published in 1998 covers approximately 100 simple compound and phrasal English prepositions of space and time with the focus being on short prepositions such as at by in and on Its target readership includes teachers of ESOL pre service translators and interpreters undergraduates in English linguistics programs studious advanced learners and users of English and anyone who is inquisitive about the English language The overall aim is to explain how and why meaning changes when one preposition is swapped for another in the same context While retaining most of the structure of the original this edition says more about more prepositions It includes many more figures virtually all new The exposition draws on recent research and is substantially founded on evidence from digitalized corpora including frequency data EPE gives information and insights that will not be found in dictionaries and grammar handbooks **The Semantics of Prepositions** Cornelia

Zelinsky-Wibbelt, 2011-09-06 No detailed description available for The Semantics of Prepositions Prepositions in Their Syntactic, Semantic, and Pragmatic Context Susanne Feigenbaum, Dennis Kurzon, 2002-01-01 The growing interest in prepositions is reflected by this impressive collection of papers from leading scholars of various fields The selected contributions of Prepositions in their Syntactic Semantic and Pragmatic Context focus on the local and temporal semantics of prepositions in relation to their context too Following an introduction which puts this new approach into a thematical and historical perspective the volume presents fifteen studies in the following areas The semantics of space dynamics mainly on French prepositions Language acquisition aphasia and code switching Artificial intelligence mainly of English prepositions Specific languages Hebrew from a number of perspectives syntax semiotics and sociolinguistic impact on morphology Maltese the Melanesian English based Creole Bislama and Biblical translations into Judeo Greek **Corpus Methods for**

Semantics Dylan Glynn, Justyna A. Robinson, 2014-11-06 This volume seeks to advance and popularise the use of corpus driven quantitative methods in the study of semantics The first part presents state of the art research in polysemy and synonymy from a Cognitive Linguistic perspective The second part presents and explains in a didactic manner each of the statistical techniques used in the first part of the volume A handbook both for linguists working with statistics in corpus research and for linguists in the fields of polysemy and synonymy **Language Typology and Language Universals**

2. Teilband Martin Haspelmath, Ekkehard König, Wulf Oesterreicher, Wolfgang Raible, 2008-07-14 No detailed description available for Language Typology and Language Universals 2 Teilband Constructions in Cognitive Contexts Franziska Günther, 2016-11-07 In what ways are language cognition and perception interrelated Do they influence each other This book casts a fresh light on these questions by putting individual speakers cognitive contexts i e their usage preferences and entrenched patterns of linguistic knowledge into the focus of investigation It presents findings from original experimental research on spatial language use which indicate that these individual specific factors indeed play a central role in determining whether or not differences in the current and or habitual linguistic behaviour of speakers of German and English are systematically correlated with differences in non linguistic behaviour visual attention allocation to and memory for spatial referent scenes These findings form the basis of a new speaker focused usage based model of linguistic relativity which defines language perception cognition effects as a phenomenon which primarily occurs within individual speakers rather than between speakers or speech communities **Neuropsycholinguistic Perspectives on Language Cognition** Corine Astesano, Mélanie Jucla, 2015-06-12 This book brings together experts from the fields of linguistics psychology and neuroscience to explore how a multidisciplinary approach can impact on research into the neurocognition of language International contributors present cutting edge research from cognitive and developmental psychology neuropsychology psycholinguistics and computer science and discuss how this contributes to neuropsycholinguistics a term coined by Jean Luc Nespoulous to whom this book is dedicated Chapters illustrate how researchers with different methods and theoretical backgrounds can contribute to a unified vision of the study of language cognition Reinterpreting neuropsycholinguistics through the lens of each research field the book demonstrates important attempts to adopt a comprehensive view of speech and language pathology Divided into three sections the book covers linguistic mechanisms and the architecture of language the relationship between language and other cognitive processes the assessment of speech and language disabilities and compensatory mechanisms Neuropsycholinguistic Perspectives on Language Cognition presents a unique contribution to cognitive science and language science from linguistics to neuroscience It will interest academics and scholars in the field as well as medical researchers psychologists and speech and language therapists *Memory, Mind and Language* Hans Götzsche, 2020-05-15 Memory Mind and Language celebrates the 30th anniversary of the The Nordic Association of Linguists NAL and the main contribution is the history of those first 30 years The book is also an overview of trends and basic problems in linguistics in the first decennium of the 21st century It takes up a number of topics in the field among them the question of synchrony vs diachrony in the language sciences and issues of how to investigate the relationship between language brain and mind The book proposes some preliminary solutions to that problem and most significantly it touches on both general and specific issues in theory and analysis e g adverbs in English and Norwegian verb semantics pronouns in Estonian morphology and neurolinguistics word order and morphology the nature and use of prepositions and speech acts The

contributing scholars come from a variety of traditions in linguistics a fact that shows the broadness of the content

Readings in Intelligent User Interfaces Mark Maybury, Wolfgang Wahlster, 1998-04 This is a compilation of the classic readings in intelligent user interfaces This text focuses on intelligent knowledge based interfaces combining spoken language natural language processing and multimedia and multimodal processing Variety and Variability Imran Ho-Abdullah, 2010 Research into varieties of Englishes around the world has received much attention from scholars This book offers a new perspective from a cognitive inter and intra lexemic analysis of prepositional variations in Malaysian English and contrasts them with similar prepositions in New Zealand and British English Based on corpora data from the three varieties the author provides usage types analysis of the prepositions at in and on The analysis exploits cognitive approaches to prepositional polysemy and gives a motivated account of prepositional variations across varieties The book offers a wealth of corpus based linguistic data and explanation to our understanding of variations in prepositional usage in different varieties of English The distributional frequencies of various usage types are provided to illustrate the variation **Phraseology** Sylviane Granger, Fanny Meunier, 2008-06-01 Long regarded as a peripheral issue phraseology is now taking centre stage in a wide range of fields This recent explosion of interest undoubtedly has a great deal to do with the development of corpus linguistics research which has both demonstrated the key role of phraseological expressions in language and provided researchers with automated methods of extraction and analysis The aim of this volume is to take stock of current research in phraseology from a variety of perspectives theoretical descriptive contrastive cultural lexicographic and computational It contains overview chapters by leading experts in the field and a series of case studies focusing on a wide range of multiword units collocations similes idioms routine formulae and recurrent phrases The volume is an invitation for experienced phraseologists to look at the field with different eyes and a useful introduction for the many researchers who are intrigued by phraseology but need help in finding their way in this rich but complex domain *New Directions in Cognitive Linguistics* Vyvyan Evans, Stephanie Pourcel, 2009 Nearly three decades since the publication of the seminal *Metaphors We Live By* Cognitive Linguistics is now a mature theoretical and empirical enterprise with a voluminous associated literature It is arguably the most rapidly expanding school in modern linguistics and one of the most exciting areas of research within the interdisciplinary project known as cognitive science As such Cognitive Linguistics is increasingly attracting a broad readership both within linguistics as well as from neighbouring disciplines including other cognitive and social sciences and from disciplines within the humanities This volume contains over 20 papers by leading experts in cognitive linguistics which survey the state of the art and new directions in cognitive linguistics The volume is divided into 5 sections covering all the traditional areas of study in cognitive linguistics as well as newer areas including applications and extensions Sections include Approaches to semantics Approaches to metaphor and blending Approaches to grammar Language embodiment and cognition Extensions and applications of cognitive linguistics *Experiential Constructions in Latin* Chiara Fedriani, 2014-06-12 This volume is about

the morphosyntactic encoding of feelings and emotions in Latin It offers a corpus based investigation of the Latin data benefiting from insights of the functional and typological approach to language Chiara Fedriani describes a patterned variation in Latin Experiential constructions also revisiting the so called impersonal constructions and shows how and why such a variation is at the root of diachronic change The data discussed in this book also show that Latin constitutes an interesting stage within a broader diachronic development since it retains some ancient Indo European features that gradually disappeared and went lost in the Romance languages

The role of constituents in multiword expressions

Sabine Schulte im Walde, Eva Smolka ,2020 Multiword expressions MWEs such as noun compounds e g nickname in English and Ohrwurm in German complex verbs e g give up in English and aufgeben in German and idioms e g break the ice in English and das Eis brechen in German may be interpreted literally but often undergo meaning shifts with respect to their constituents Theoretical psycholinguistic as well as computational linguistic research remain puzzled by when and how MWEs receive literal vs meaning shifted interpretations what the contributions of the MWE constituents are to the degree of semantic transparency i e meaning compositionality of the MWE and how literal vs meaning shifted MWEs are processed and computed This edited volume presents an interdisciplinary selection of seven papers on recent findings across linguistic psycholinguistic corpus based and computational research fields and perspectives discussing the interaction of constituent properties and MWE meanings and how MWE constituents contribute to the processing and representation of MWEs The collection is based on a workshop at the 2017 annual conference of the German Linguistic Society DGfS that took place at Saarland University in Saarbrücken Germany

Spatial Cognition Seán Ó Nualláin,2000 Spatial Cognition brings together psychology computer science linguistics and geography discussing how people think about space our internal cognitive maps and spatial perception and how we communicate about space for instance giving route directions or using spatial metaphors The technological applications adding dynamism to the area include computer interfaces educational software multimedia and in car navigation systems On the experimental level themes as varied as gender differences in orientation and of course wholly unrelated the role of the hippocampus in rodent navigation are described Much detailed analysis and computational modeling of the structure of short term memory STM is discussed The papers were presented at the 1998 annual meeting of the Cognitive Science Society of Ireland Mind III Series B

The Spatial Foundations of Cognition and Language

Kelly S. Mix,Linda B. Smith,Michael Gasser,2010 This book presents recent research on the role of space as a mechanism in language use and learning Experimental psychologists computer scientists robotocists linguists and researchers in child language consider the nature and applications of this research and its implications for understanding the processes involved in language acquisition

Substrate and Adstrate Micah Corum,2015-04-24 This volume provides a large scale in depth analysis of locative structures in Nigerian Pidgin and Ghanaian Pidgin English and compares those structures to locatives in their lexifier substrate and adstrate languages The work draws on new research methods for investigating substrate and

adstrate influence in semantics and creole genesis

Polysemy in Cognitive Linguistics Hubert Cuyckens, Britta E.

Zawada, 2001-07-13 In Cognitive Linguistics polysemy is regarded as a categorizing phenomenon i.e. related meanings of words form categories centering around a prototype and bearing family resemblance relations to one another Under this polysemy categorization view the scope of investigation has been gradually broadened from categories in the lexical and lexico grammatical domain to morphological syntactic and phonological categories The papers in this volume illustrate the importance of polysemy in describing these various categories A first set of papers analyzes the polysemy of such lexical categories as prepositions and scalar particles and looks at the import of polysemy in frame based dictionary definitions A second set shows that noun classes case and locative prefixes constitute meaningful and polysemous categories Three papers then pay attention to polysemy from a psychological perspective looking for psychological evidence of polysemy in lexical categories

The Categorization of Spatial Entities in Language and Cognition Michel Aurnague, Maya

Hickmann, Laure Vieu, 2007-01-01 Despite a growing interest for space in language most research has focused on spatial markers specifying the static or dynamic relationships among entities verbs prepositions postpositions case markings Little attention has been paid to the very properties of spatial entities their status in linguistic descriptions and their implications for spatial cognition and its development in children This topic is at the center of this book that opens a new field by sketching some major theoretical and methodological directions for future research on spatial entities Brought together linguistic descriptions of spatial systems formal accounts of linguistic data and experimental findings from psycholinguistic studies all couched within a wide cross linguistic perspective Such an interdisciplinary approach provides a rich overview of the many questions that remain unanswered in relation to spatial entities while also throwing a new light on previous research focusing on related topics concerning space and or the relation between language and cognition
