Sensations A Defense Of Type Materialism:

Sensations Christopher S. Hill, 1991-01-25 This is a book about sensory states and their apparent characteristics It confronts a whole series of metaphysical and epistemological questions and presents an argument for type materialism the view that sensory states are identical with the neural states with which they are correlated According to type materialism sensations are only possessed by human beings and members of related biological species silicon based androids cannot have sensations The author rebuts several other rival theories dualism double aspect theory eliminative materialism functionalism and explores a number of important issues the forms and limits of introspective awareness of sensations the semantic properties of sensory concepts knowledge of other minds and unity of consciousness The book is a significant contribution to the philosophy of mind and has much to say to psychologists and cognitive scientists **Philosophy of Mind** Jaegwon

The Oxford Companion to Consciousness Tim Bayne, Axel Cleeremans, Patrick Wilken, 2014-02-27 Consciousness is undoubtedly one of the last remaining scientific mysteries and hence one of the greatest contemporary scientific challenges How does the brain's activity result in the rich phenomenology that characterizes our waking life Are animals conscious Why did consciousness evolve How does science proceed to answer such questions Can we define what consciousness is Can we measure it Can we use experimental results to further our understanding of disorders of consciousness such as those seen in schizophrenia delirium or altered states of consciousness These questions are at the heart of contemporary research in the domain Answering them requires a fundamentally interdisciplinary approach that engages not only philosophers but also neuroscientists and psychologists in a joint effort to develop novel approaches that reflect both the stunning recent advances in imaging methods as well as the continuing refinement of our concepts of consciousness In this light the Oxford Companion to Consciousness is the most complete authoritative survey of contemporary research on consciousness Five years in the making and including over 250 concise entries written by leaders in the field the volume covers both fundamental knowledge as well as more recent advances in this rapidly changing domain Structured as an easy to use dictionary and extensively cross referenced the Companion offers contributions from philosophy of mind to neuroscience from experimental psychology to clinical findings so reflecting the profoundly interdisciplinary nature of the domain Particular care has been taken to ensure that each of the entries is accessible to the general reader and that the overall volume represents a comprehensive snapshot of the contemporary study of consciousness The result is a unique compendium that will prove indispensable to anyone interested in consciousness from beginning students wishing to clarify a concept to professional consciousness researchers looking for the best characterization of a particular phenomenon

It provides a rigorous and yet accessible overview of a rich array of topics connecting the abstract nature of metaphysics with the real world. Topics covered include basic logic for metaphysics, an introduction to ontology, abstract objects, material objects, critiques of metaphysics, natural and social kinds, the metaphysics of race and gender, grounding and fundamentality, free will, time, modality, persistence, causation. This outstanding book not only equips the reader with a thorough knowledge of the fundamentals of metaphysics but provides a valuable guide to contemporary metaphysics and metaphysicians. New for this second edition are updated sections on metaphysical indeterminacy, new sections on manipulation arguments and free will and neuroscience, and new chapters on the important topics of social ontology, fundamentality and grounding. Additional features such as exercises, annotated further reading, a glossary, and a companion website (<https://routledge-textbooks.com/textbooks/9780815350491>) have also been updated and will help students find their way around this subject and assist teachers in the classroom.

An Introduction to Philosophical Methods Christopher Daly, 2010-07-20 *An Introduction to Philosophical Methods* is the first book to survey the various methods that philosophers use to support their views. Rigorous yet accessible, the book introduces and illustrates the methodological considerations that are involved in current philosophical debates. Where there is controversy, the book presents the case for each side but highlights where the key difficulties with them lie. While eminently student friendly, the book makes an important contribution to the debate regarding the acceptability of the various philosophical methods and so it will also be of interest to more experienced philosophers.

Philosophy of Mind in the Twentieth and Twenty-First Centuries Amy Kind, 2018-07-06 While the philosophical study of mind has always required philosophers to attend to the scientific developments of their day, from the twentieth century onwards it has been especially influenced and informed by psychology, neuroscience, and computer science. *Philosophy of Mind in the Twentieth and Twenty-First Centuries* provides an outstanding survey of the most prominent themes in twentieth century and contemporary philosophy of mind. It also looks to the future, offering cautious predictions about developments in the field in the years to come. Following an introduction by Amy Kind, twelve specially commissioned chapters by an international team of contributors discuss key topics, thinkers, and debates, including the phenomenological tradition, the mind-body problem, theories of consciousness, theories of perception, theories of personal identity, mental causation, intentionality, Wittgenstein and his legacy, cognitive science, and future directions for philosophy of mind. Essential reading for students and researchers in philosophy of mind and philosophy of psychology. *Philosophy of Mind in the Twentieth and Twenty-First Centuries* is also a valuable resource for those in related disciplines such as psychology and cognitive science.

Brute Facts Elly Vintiadis, Constantin Mekios, 2018 *Brute facts* are facts that don't have explanations. They are instrumental in our attempts to give accounts of other facts or phenomena and so they play a key role in many philosophers' views about the

structure of the world This volume explores neglected questions about the nature of brute facts and their explanatory role

Oxford Studies in Philosophy of Mind Uriah Kriegel, 2024-09-21 Oxford Studies in Philosophy of Mind presents cutting edge work in the philosophy of mind combining invited articles and articles selected from submissions Each volume will highlight two themes to bring focus to debates The series will reflect the diversity of methods adopted in contemporary philosophy of mind and provide a venue for rigorous and innovative work by both established and up and coming voices in the field The themes covered in the fourth volume are twenty first century idealism acquaintance and perception and acquaintance and consciousness It also contains a book symposium on David Chalmers Reality and an article on Aristotle's philosophy of mind

World Without Design Michael C. Rea, 2002-08-01 Philosophical naturalism according to which philosophy is continuous with the natural sciences has dominated the Western academy for well over a century but Michael Rea claims that it is without rational foundation and that the costs of embracing it are surprisingly high The first part of World Without Design aims to provide a fair and historically informed characterization of naturalism Rea then argues compellingly to the surprising conclusion that naturalists are committed to rejecting realism about material objects materialism and perhaps realism about other minds This conclusion is striking largely because naturalism is often simply identified with materialism and the remaining two theses are ones that naturalists very typically want to endorse Rea goes on to examine two alternative research programs intuitionism and supernaturalism and argues for the conclusion that intuitionism under certain circumstances is self defeating World Without Design offers a provocative challenge to philosophical orthodoxy It will make uncomfortable reading for many philosophers

Physicalism and Mental Causation Sven Walter, Heinz-Dieter Heckmann, 2015-11-04 Physicalism the thesis that everything there is in the world including our minds is constituted by basic physical entities has dominated the philosophy of mind during the last few decades But although the conceptual foundations of the physicalist agenda including a proper explication of notions such as causation determination realization or even physicalism itself must be settled before more specific problems e.g. the problems of mental causation and human agency can be satisfactorily addressed a comprehensive philosophical reflection on the relationships between the various key concepts of the debate on physicalism is yet missing This book presents a range of essays on the conceptual foundations of physicalism mental causation and human agency written by established and leading authors in the field

The Routledge Dictionary of Philosophy Michael Proudfoot, A.R. Lacey, 2009-12-04 First published in 1976 the Dictionary of Philosophy has established itself as the best available text of its kind explaining often unfamiliar complicated and diverse terminology Thoroughly revised and expanded this fourth edition provides authoritative and rigorous definitions of a broad range of philosophical concepts Concentrating on the Western philosophical tradition The Routledge Dictionary of Philosophy offers an illuminating and informed introduction to the central issues ideas and perspectives in core fields such as metaphysics epistemology and logic It includes concise biographical entries for more than one hundred major philosophers

from Plato and Aristotle through to contemporary figures such as Dummett McDowell Parfit and Singer All major entries are followed by helpful suggestions for further reading including web links and contain extensive cross referencing to aid access and comprehension This edition also features a brand new guide to the most useful philosophy sites on the internet The Routledge Dictionary of Philosophy is an invaluable and up to date resource for all students of philosophy

Natural Minds Thomas W. Polger, 2006-01-20 In *Natural Minds* Thomas Polger advocates and defends the philosophical theory that mind equals brain that sensations are brain processes and in doing so brings the mind brain identity theory back into the philosophical debate about consciousness The version of identity theory that Polger advocates holds that conscious processes events states or properties are type identical to biological processes events states or properties a tough minded account that maintains that minds are necessarily identical to brains a position held by few current identity theorists Polger s approach to what William James called the great blooming buzzing confusion of consciousness begins with the idea that we need to know more about brains in order to understand consciousness fully but recognizes that biology alone cannot provide the entire explanation *Natural Minds* takes on issues from philosophy of mind philosophy of science and metaphysics moving freely among them in its discussion Polger begins by answering two major objections to identity theory Hilary Putnam s argument from multiple realizability which discounts identity theory because creatures with brains unlike ours could also have mental states and Saul Kripke s modal argument against mind brain identity based on the apparent contingency of the identity statement He then offers a detailed account of functionalism and functional realization which offer the most serious obstacle to consideration of identity theory Polger argues that identity theory can itself satisfy the kind of explanatory demands that are often believed to favor functionalism

Purple Haze Joseph Levine, 2001-01-04 Conscious experience presents a deep puzzle On the one hand a fairly robust materialism must be true in order to explain how it is that conscious events causally interact with non conscious physical events On the other hand we cannot explain how physical phenomena give rise to conscious experience In this wide ranging study Joseph Levine explores both sides of the mind body dilemma presenting the first book length treatment of his highly influential ideas on the explanatory gap the fact that we can t explain the nature of phenomenal experience in terms of its physical realization He presents a careful argument that there is such a gap and after providing intriguing analyses of virtually all existing theories of consciousness shows that recent attempts to close it fall short of the mark Levine concludes that in the foreseeable future consciousness will remain a mystery

The Multiple Realization Book Thomas W. Polger, Lawrence A. Shapiro, 2016-09-02 Since Hilary Putnam offered multiple realization as an empirical hypothesis in the 1960s philosophical consensus has turned against the idea that mental processes could be identified with brain processes and multiple realization has become the keystone of the antireductive consensus across philosophy of science broadly Thomas W Polger and Lawrence A Shapiro offer the first book length investigation of multiple realization Their analysis of multiple realization serves as a starting point to a series of philosophically sophisticated and

empirically informed arguments that cast doubt on the generality of multiple realization in the cognitive sciences In the course of making their case they respond to classic defenses of multiple realization that Jerry Fodor Ned Block and other prominent philosophers of psychology have offered Polger and Shapiro conclude that the identity theory once left for dead remains a viable theory of mind one that when suitably framed enjoys the benefits typically thought to accrue only to theories of mind that presuppose the truth of multiple realization As Polger and Shapiro see matters mind brain identities have played an important role in the growth and achievements of the cognitive sciences and they see little prospect or need for multiple realization in an empirically based theory of mind This leads Polger and Shapiro to offer an alternative framework for understanding explanations in the cognitive sciences as well as in chemistry biology and other non basic sciences **A**

Historical Introduction to the Philosophy of Mind - Second Edition Peter Morton,2010-05-06 This is an expanded and revised second edition of Peter Morton s highly acclaimed A Historical Introduction to the Philosophy of Mind a text that combines primary readings with detailed commentary The book has two aims to present the philosophy of mind from a historical perspective so that the theories in the field are seen to emerge in the process of solving problems with earlier theories and to give students access to original source material together with commentaries that explain technical terms and jargon outline argumentative structures and place the texts in their historical context The second edition adds several new chapters covering recent issues in the field and revises earlier chapters to improve the readings and update the commentaries *Non-physicalist Theories of Consciousness* Hedda Hassel Mørch,2024-02-01 Is consciousness a purely

physical phenomenon Most contemporary philosophers and theorists hold that it is and take this to be supported by modern science But a significant minority endorse non physicalist theories such as dualism idealism and panpsychism among other reasons because it may seem impossible to fully explain consciousness or capture what it s like to be in conscious states such as seeing red or being in pain in physical terms This Element will introduce the main non physicalist theories of consciousness and explain the most important arguments for them and consider how they each respond to the scientific and other arguments in support of physicalism This title is also available as Open Access on Cambridge Core **The Conscious**

Mind David J. Chalmers,1997 Writing in a rigorous thought provoking style the author takes us on a far reaching tour through the philosophical ramifications of consciousness offering provocative insights into the relationship between mind and brain Dictionary of Philosophy Alan Lacey,2002-09-11 Providing an illuminating and informed introduction to central

philosophical issues concepts and perspectives in the core fields of metaphysics epistemology and philosophical logic the Dictionary takes the most common terms and notions and clarifies what they mean to the philosopher and what sort of problems the philosopher finds associated with them Thoroughly revised and updated the bibliographies supply core reading lists and each entry uses extensive cross referencing to related themes and concepts to provide a greater sense of access control and comprehension The Dictionary will also provide those working in proximate fields with an understanding of areas

of overlapping interest concepts of common applicability and the full range and diversity of philosophical analysis and insight
