Sensory Mechanism Of The Spinal Cord:

Sensory Mechanisms of the Spinal Cord William D. Willis, Richard E. Coggeshall, 1991-07-31 This monograph thoroughly examines the latest theory and research concerning spinal cord mechanisms of sensory processing The book begins with a historical review of the organization of the peripheral nervous system is outlined in terms of sensory receptors and primary afferent axons The authors examine the dorsal horn and the structure and function of dorsal horn interneurons and neurophysiological evidence concerning the location of sensory pathways in the spinal cord white matter After the dorsal column dorsolateral fasciculus and the ventral quadrant are covered the final chapter summarizes knowledge on receptors and spinal cord pathways of various sensations including touch pressure flutter vibration pain temperature position sense visceral sensation and descending control systems

Sensory Mechanisms of the Spinal Cord William D. Willis Jr., 2013-06-29 As stated in the preface to the first edition the goal of this monograph is to provide an overview of current thought about the spinal cord mechanisms responsible for sensory processing We hope that the book will be of value to both basic neuroscientists and clinicians The organization of the monograph has followed the original plan in most respects although the emphasis has changed with respect to many topics because of recent advances In particular a substantial increase in the number of investigations of the dorsal root ganglion has led us to devote a chapter to this topic The treatment of chemical neuroanatomy in the dorsal horn as well as the relevant neuropharmacology has also been expanded considerably Another major emphasis is on the results of experiments employing microneurography in human subjects We thank Margie Watson and Lyn Schilling for their assistance with the typing and Griselda Gonzales for preparing the illustrations

Sensory Mechanisms of the Spinal Cord William D. Willis, Richard E. Coggeshall, 2004-01-31 Provides an historical and contemporary overview of an active field of neuroscience research on somato visceral sensation Medical and indirectly veterinary implications are emphasized Extensive revisions have been made since the last edition including the addition of two chapters Many significant literature citations have been added for the period since the last edition The illustrations have been substantially expanded including a number that emphasize newly applied techniques

Sensory Mechanisms of the Spinal Cord W. D. Willis, 2013-03-16 The goal of this monograph is to provide an overview of current thought about spinal cord mechanisms for sensory processing We hope that the book will be useful both to basic neuroscientists and to clinicians Some historical aspects of the problem and a few definitions are treated in the first chapter The second chapter reviews the organization of the peripheral nervous system from the standpoint of sensory receptors and primary afferent axons The third chapter is concerned with what is known about the structure of the dorsal horn while the fourth chapter considers the activity of dorsal horn interneurons The clinical behavioral and neurophysiological evidence for what parts of the cord white matter contain particular sensory pathways is discussed in Chapter 5 and details about the various pathways in the dorsal columns the dorsolateral fasciculus and the ventral quadrant form the subject matter of

Chapters 6 through 8 The final chapter is an attempt to summarize what is presently known about the receptors and the spinal cord pathways responsible for the sensations of touch pressure flutter vibration pain temperature position sense and visceral sensation and about descending control systems

Sensory Mechanisms of the Spinal Cord William D. Willis Jr., Richard E. Coggeshall, 2013-06-29 The third edition of this monograph continues to have the goal of providing an overview of current thought about the spinal cord mechanisms that are responsible for sensory processing We hope that the book is of value to both basic and clinical neuroscientists Several changes have been made in the presentation as well as additions because of the research advances that have been made during the past decade Chapters 3 and 4 in the previous edition have been subdivided and now the morphology of primary afferent neurons of the dorsal root ganglia is described in Chapter 3 and the chemical neuroanatomy of these neurons in Chapter 4 The description of the dorsal horn in the previous Chapter 4 is now included in Chapter 5 and the chemical neuroanatomy of the dorsal horn in Chapter 6 Furthermore discussions of the descending control systems have now been consolidated at the end of Chapter 12 The authors would like to express their appreciation for the help provided by several individuals R E C wishes to acknowledge the many things he learned about primary afferent neurons from conversations with Dr S N Lawson He also thanks Lyn Shilling for her assistance with the typing WDW thanks Dr Nada Lawand for her critical reading of parts of the manuscript Rosaline Leigh for help with the manuscript and Griselda Gonzales for preparing the illustrations

Thioredoxin and Glutaredoxin Systems Jean-Pierre Jacquot, Mirko Zaffagnini, 2019-05-10 This Special Issue features recent data concerning thioredoxins and glutaredoxins from various biological systems including bacteria mammals and plants Four of the sixteen articles are review papers that deal with the regulation of development of the effect of hydrogen peroxide and the interactions between oxidants and reductants the description of methionine sulfoxide reductases detoxification enzymes that require thioredoxin or glutaredoxin and the response of plants to cold stress respectively This is followed by eleven research articles that focus on a reductant of thioredoxin in bacteria a thioredoxin reductase and a variety of plant and bacterial thioredoxins including the m f o and h isoforms and their targets Various parameters are studied including genetic structural and physiological properties of these systems The redox regulation of monodehydroascorbate reductase aminolevulinic acid dehydratase and cytosolic isocitrate dehydrogenase could have very important consequences in plant metabolism Also the properties of the mitochondrial o type thioredoxins and their unexpected capacity to bind iron sulfur center ISC structures open new developments concerning the redox mitochondrial function and possibly ISC assembly in mitochondria The final paper discusses interesting biotechnological applications of thioredoxin for breadmaking
