

Acute Sensory Perception

- Why can arthropods respond so quickly to their environment?
 - Strong muscular contraction
 - Detect movement, chemicals and sound with antennae

- Antennae have odor and sound receptors that are used in communication with other members of species (spiders lack these)
- Pheromones—chemical odor signals given off by animals (signal animals to engage in variety of behaviors)

- Accurate vision: **EYES**

- Most arthropods have one pair of large compound eyes and 3-8 simple eyes
- Simple eyes- single lensed-structures for detecting light
- Compound eyes—visual structures with many lenses
 - Each lens registers a tiny portion of the field of view, so the total image is made of thousands of parts (panoramic view)
