Separation And Its Discontents Toward An Evolutio:

Separation and Its Discontents Kevin B. MacDonald, 1998 MacDonald develops a theory of anti-Semitism based on an evolutionary interpretation of social identity theory. Historical examples of anti-Semitism are analyzed as scientifically comprehensible gentile responses to a distinctive segregated group. Anti-Semitism has historically been exacerbated by resource competition between Jews and gentiles. Jews have engaged in a wide range of strategies to try to combat it. These strategies include crypsis, political activity, writing religious and intellectual apologia directed at both ingroup and outgroup members, and engaging in self-deception regarding both the nature of Judaism and gentile responses to Judaism. **The Evolutionary Neuroethology of Paul MacLean** Gerald A. Cory Jr., Russell Gardner Jr., 2002-12-30 In the mid 20th century integrative efforts began concerning the brain and its social and humanistic functions. These efforts were led by Paul D. MacLean's integrative research and thought. As the century ended, however, such efforts were lost in the surge of new effort in brain and genome research. Nobel Prizes were awarded on biochemical and cellular findings relevant to psychiatry. Findings on these levels seemed to provide ultimate answers. By contrast, Cory Gardner and their contributors provide a more comprehensive view by extending MacLean's findings and integrative theory. Supported by new findings and extended by critical analyses of current work, the collection provides foundations for more integrative efforts that the editors and contributors believe will prevail increasingly in coming decades. Looked at from another vantage point, therapeutic, social, economic, and political sciences have proceeded without operating theories congruent with or based on brain functions. Across species perspectives have been lacking. This collection redresses this problem and leads the way toward more comprehensive 21st century research on the one hand and practical applications on the other. Multiple approaches extend from modeling efforts to across species comparisons to the basic science of psychiatry to theoretical explanations of political and economic systems. But most important, these essays abolish the Berlin wall that currently separates the brain from its social functions. A major guide for scholars, students, and researchers involved in the neurobehavioral sciences for psychologists, psychiatrists, and others involved with human clinical sciences and for social scientists concerned with the impact of the nervous system and its function. **The Rise of the Alt-Right** Thomas J. Main, 2018-07-31 What is the Alt Right and how will it affect America? Donald Trump's election as president in 2016 suddenly brought to prominence a political movement that few in political circles or the mainstream media had paid much attention to. The so-called Alt Right. Steven Bannon, Trump's campaign manager, was a leading figure in the movement, and the election results seemed to give it a real opportunity to gain some political power. But what is the Alt Right? Is it a movement, a theory, a trend, or just an unorganized group of people far outside of what used to be the political mainstream in America? Or could it be all of these things? Why has it suddenly emerged into prominence? What impact is it having on American politics today, and what are the prospects for the Alt Right in the future? Through careful research and analysis, *The Rise of the Alt Right* addresses these and other questions, tracing the

movement's history from the founding of modern conservatism in postwar America to the current Trump era. Although the Alt Right might seem to be just the latest extremist group to arise in the United States, one likely to take its place in the graveyard of its many predecessors, Thomas J. Main analyzes evidence that the Alt Right is having a greater influence on the American political mainstream than did past extremist tendencies. *The Rise of the Alt Right* is thus an important study for anyone interested in the future of American politics and public life. *The Myth of Jewish Communism* André Gerrits, 2009 This title presents a full length analysis of the identification of Jews with communism. It traces the myth of Jewish communism from the traditional anti Jewish prejudices on which it is built to its crucial role in Eastern European Stalinist and post Stalinist politics. **Evolution and Literary Theory** Joseph Carroll, 1995 Over the past two decades poststructuralism in its myriad forms has come to dominate literary criticism to the exclusion of virtually any other point of view. Few scholars have escaped the coercive authority of its programmatic radicalism. In *Evolution and Literary Theory* Joseph Carroll vigorously attacks the foundational principles of poststructuralism and offers in their stead a bold new theory that situates literary criticism within the matrix of evolutionary theory. *The Evolution of Human Sociality* Stephen K. Sanderson, 2001 This text attempts a broad theoretical synthesis within the field of sociology and its closely allied sister discipline of anthropology. It draws together these disciplines' theoretical approaches into a synthesized theory called Darwinian conflict theory.

Darwin's Cathedral David Sloan Wilson, 2024-05-31 A study examining the connection between religious faith and human evolution. Thoughtful and provocative, Wilson turns to religion, which he claims can be explained only by group selection. According to Wilson, a religion is the human equivalent of a pack of lions: by cooperating as a group, people attain benefits beyond their reach as individuals. *Times Literary Supplement* Book of the Year. One of the great intellectual battles of modern times is between evolution and religion. Until now they have been considered completely irreconcilable theories of origin and existence. David Sloan Wilson's *Darwin's Cathedral* takes the radical step of joining the two in the process, proposing an evolutionary theory of religion that shakes both evolutionary biology and social theory at their foundations. The key argument Wilson is to think of society as an organism, an old idea that has received new life based on recent developments in evolutionary biology. If society is an organism, can we then think of morality and religion as biologically and culturally evolved adaptations that enable human groups to function as single units rather than mere collections of individuals? Wilson brings a variety of evidence to bear on this question from both the biological and social sciences. From Calvinism in sixteenth century Geneva to Balinese water temples, from hunter-gatherer societies to urban America, Wilson demonstrates how religions have enabled people to achieve by collective action what they never could do alone. He also includes a chapter considering forgiveness from an evolutionary perspective and concludes by discussing how all social organizations, including science, could benefit by incorporating elements of religion. Religious believers often compare their communities to single organisms, and even to insect colonies. Astoundingly, Wilson shows that they might be literally correct. Intended for any educated reader.

Darwin's Cathedral will change forever the way we view the relations among evolution religion and human society As always Wilson writes well and clearly and in a stimulating and provocative style The book is interesting and important and there can be no higher praise I applaud the approach taken by Wilson and I urge you to read Darwin's Cathedral Science Wilson's book is more than just an attempt to understand religion Even to readers with no interest in either religion or science his book can serve as a model of how to discuss controversial subjects honestly New York Review of Books

Digital Media Strategies of the Far Right in Europe and the United States Patricia Anne Simpson, Helga Druxes, 2015-05-06 With the leverage of digital reproducibility historical messages of hate are finding new recipients with breathtaking speed and scope The rapid growth in popularity of right wing extremist groups in response to transnational economic crises underscores the importance of examining in detail the language and political mobilization strategies of the New Right In Europe for example populist right wing activists organized around an anti immigration agenda are becoming more vocal providing pushback against the increase in migration flows from North Africa and Eastern Europe and countering support for integration with a categorical rejection of multiculturalism In the United States anti immigration sentiment provides a rallying point for political and personal agendas that connect the rhetoric of borders with national racial and security issues Digital Media Strategies of the Far Right in Europe and the United States is an effort to examine and understand these issues informed by the conviction that an interdisciplinary and transnational approach can allow productive comparison of far right propaganda strategies in Europe and the United States With a special emphasis on performing ideology in the far right music scene on violent anti immigrant stances and on the far right's skillful creation and manipulation of virtual communities the contributions foreground the cultural shibboleths that are exchanged among far right supporters on the Internet which serve to generate a sense of group belonging and the illusion of power far greater than the known numbers of neo Nazis in any one country might suggest Moreover with attention to transatlantic right wing movements and their use of particularly digital media the essays in this volume put pressure on the similarities among the various national agents while accommodating differences in the virtual and sometimes violent identities created and nurtured online

The Evolution of Political Ideology Steven Charles Hertler, Aurelio José Figueredo, Mateo Peñaherrera-Aguirre, 2025-10-18 This book applies multilevel selection theory to an examination of both the natural history of ideology and how that natural history has unfolded through the course of civil history in the Western world Its authors bring together research from across the fields of history political science genetics neurobiology and social science to offer an unprecedented synthesis Addressing natural history Part I evolutionarily explains why political ideology is substantially genetic correlates with personality traits and is represented in brain regions associated with risk and emotional processing Addressing civil history Part II traces the evolution of political ideology across anthropological transitions from non human primates to small scale societies and across historical transitions from autocratic states through to democratic societies with political parties peaceably transferring power and tolerating opposition In this

way its authors aim to demonstrate that temperamental antecedents to political ideology that are biologically derived evolutionarily explicable and historically palpable This book presents timely insights into issues the evolutionary history of hyper partisanship that will be of interest to scholars across the fields of political science political psychology evolutionary psychology and history

Risky Transactions Frank K. Salter, 2002 Trust is a central feature of relationships within the Mafia oppressed minorities kin groups everywhere among dissidents nationalist freedom fighters ethnic tourists ethnic middlemen exchange networks of Kalahari Bushmen and families subjected to Stalinist social control Each of these types of trust is examined by a leading scholar and compared with the expectations of neo Darwinian theory in particular the theories of kin selection and ethnic nepotism The result is a fascinating theoretically focused yet empirically eclectic contribution to the overlapping fields of human ethnology evolutionary psychology and bio politics The common thread uniting these diverse phenomena is a trusting relationship predicated on altruism Chapters examine the strengths and limits of human trust under various stressors and temptations to defect By exploring the relationship between kin and ethnic altruism and showing its sensitivity to culture Risky Transactions recasts the evolutionary approach to ethnicity as a blend of primordial and instrumental factors

Welfare, Ethnicity and Altruism Frank Salter, 2013-03-07 Welfare Ethnicity and Altruism applies the controversial theory of Ethnic Nepotism first formulated by Irenäus Eibl-Eibesfeldt and Pierre van den Berghe to the modern welfare state both are authors in this volume This theory states that ethnic groups resemble large families whose members are prone to cooperate due to kin altruism Recent empirical findings in economics and political science offer confirmatory evidence The book presents two separate studies that compare welfare expenditures around the world both indicating that the more ethnically mixed a population becomes the greater is its resistance to redistributive policies These results point to profound inconsistencies within ideologies of both left and right regarding ethnicity

Ethnic Conflict and Indoctrination Irenäus Eibl-Eibesfeldt, Frank K. Salter, 1998 Violent ethno nationalist conflicts continue to mar the history of the current century yet no satisfactory answer to the question of why humans are susceptible to indoctrination by ideologies that lead to inter group hostility has so far been found In this volume an international team of leading scientists from many different fields approach this complex issue from a biological perspective treating indoctrinability as a predisposition that has its roots in humanity's evolutionary past

The WASP Question Andrew Fraser, 2011 Fraser offers a groundbreaking contribution to the project of synthesizing Anglo American constitutional and legal history with the evolutionary biology of ethnicity and a Christian ethno theology The WASP Question is valuable for focusing attention on the plight of Anglo Saxon societies assailed by runaway materialism and imposed diversity

IQ and the Wealth of Nations Richard Lynn, Tatu Vanhanen, 2002-02-28 Lynn and Vanhanen test the hypothesis on the causal relationship between the average national intelligence IQ and the gap between rich and poor countries by empirical evidence Based on an extensive survey of national IQ tests the results of their work challenge the previous theories of economic development and provide a new basis to evaluate the prospects of

economic development throughout the world They begin by reviewing and evaluating some major previous theories The concept of intelligence is then described and intelligence quotient IQ introduced Next they show that intelligence is a significant determinant of earnings within nations and they connect intelligence with various economic and social phenomena The sociology of intelligence at the level of sub populations in nations is examined and the independent national IQ and dependent various measures of per capita income and economic growth rates variables are defined and described They then provide empirical analyses starting from the 81 countries for which direct evidence of national IQs is available the analysis is then extended to the world group of 185 countries The hypothesis is tested by the methods of correlation and regression analyses The results of statistical analyses support the hypothesis strongly The results of the analyses and various means to reduce the gap between rich and poor countries are discussed A provocative analysis that all scholars students and researchers involved with economic development need to confront *Indoctrinability, Ideology, and Warfare* Irenäus Eibl-Eibesfeldt, Frank K. Salter, 1998 Violent ethno nationalist conflicts continue to mar the history of the twentieth century yet no satisfactory answer as to why humans are susceptible to indoctrination by ideologies leading to inter group hostility has thus far been found This volume brings together an international team of leading scientists to address this complex issue from disciplines as diverse as anthropology psychology psychobiology sociology philosophy ethology sociology and political science Treating the processes of indoctrination as a biological phenomenon with physiological and psychological aspects these essays explore the answers to this pressing question in humanity s evolutionary past *Illiberal Vanguard* Alexandar Mihailovic, 2023-02-14 Recent years have witnessed a growing affinity between increasingly radicalized right wing movements in the United States and Russia countries that only recently viewed each other as intractable foes In *Illiberal Vanguard* Populist Elitism in the United States and Russia Alexandar Mihailovic untangles this confluence considering ethnonationalist movements in both countries and their parallel approaches to gender race and performative identity Rather than probe specific points of possible contact or political collusion Mihailovic unveils the mirrored styles of thought that characterize far right elitism in two erstwhile enemy nations Mihailovic investigates notable right wing actors like Steve Bannon and Alexander Dugin and targets of right wing ire such as globalization LGBTQ activism and mobilizations to remove controversial statues that honor Confederate generals and Soviet leaders for instance but the argument extends beyond the specifics How and why are radical right wing movements developing along such similar trajectories in two nominally oppositional countries How do religious sectarianism the construction of whiteness and institutionalized homophobia support each other in this transnational informal but powerful allegiance Despite their appeals to populism and flamboyant theatrics Mihailovic argues much of the answer can be found in the mutual desire to justify and organize an illiberal vanguard of elite intellectuals one that supports and advocates for a new authoritarianism **Modern-Day Xenophobia** Oksana Yakushko, 2018-11-17 This book engages the topic of xenophobia from both psychological and socio political approaches

Recently xenophobia as a social standpoint or social attitude has come under increased scrutiny by the public scholars and educators however few works have directly summarized current theories of xenophobia as well as articulated critical perspectives on the issue This work provides an overview of the concept historical factors related to its development and a review of varied theoretical perspectives The intertwining of psychological and sociological perspectives allows the author to present a multi dimensional multi layered argument in a way which effectively prevents any attempt to apply any one single overarching theory and thus effectively presents the complexity of the topic at hand

A People that Shall Dwell Alone Kevin MacDonald, 2002 This book attempts to understand an ancient people in terms of modern evolutionary biology A basic idea is that Judaism is a group evolutionary strategy what one might term an evolutionarily significant way for a group of people to get on in the world The book documents several theoretically interesting aspects of group evolutionary strategies using Judaism as a case study These topics include the theory of group evolutionary strategies the genetic cohesion of Judaism how Jews managed to erect and enforce barriers to gene flow between themselves and other peoples resource competition between Jews and non Jews how Jews managed to have a high level of charity within their communities and at the same time prevented free riding how some groups of Jews came to have such high IQ s and how Judaism developed in antiquity This book was originally published in 1994 by Praeger Publishers The Writers Club edition contains a new preface

Diaspora Peoples describing several interesting group evolutionary strategies The Gypsies the Hutterites and Amish the Calvinists and Puritans and the Overseas Chinese

Evolutionary Perspectives on Human Development Robert G. Burgess, Kevin MacDonald, 2005 This new edition of Evolutionary Perspectives on Human Development is obligatory reading for anyone interested in the integration of evolutionary theory into developmental psychology It provides a valuable corrective to recent narrow approaches which argue that the human mind is constructed exclusively of domain specific mechanisms and which deemphasize the importance of human psychological and behavioral plasticity Anyone who reads this book will come away with a richer understanding of our shared human nature Bill Irons Northwestern University In this volume Burgess and MacDonald have brought together a distinguished group of psychologists and anthropologists to investigate how given our evolutionary heritage genetic make up and salient environment behavior cognition and emotion unfold from the human organism They make clear that both evolutionary functional and proximate behavioral perspectives are essential to understanding the human mind and its products Many of these essays should be required reading for sociobiologists evolutionary psychologists and evolutionary anthropologists and their ilk Jeffrey Kurland Penn State It s clear that evolutionary biology has a tremendous amount to offer when it comes to our understanding of human development and yet many experts in developmental psychology have remained impervious to these insights At last this may change Burgess and MacDonald have compiled a rich array of theory and data much of it contributed by the leading lights of evolutionary psychology or if you prefer sociobiology A very valuable collection and one that might help define a new and important field

David P Barash University of Washington Evolutionary Perspectives on Human Development Second Edition considers the role of evolutionary theory in the field of developmental psychology to examine key topics of individual human development This unique book fills an important gap in the literature applying evolutionary models to human development by focusing on central development issues The book emphasizes both domain general evolved psychological mechanisms and domain specific processes The text also integrates behavior genetic research with evolutionary and developmental principles In this contributed volume editors Robert L Burgess and Kevin MacDonald have brought together a distinguished group of social and behavioral scientists employing multiple levels of analysis drawn from a variety of academic disciplines This diverse group of contributors illustrates the enormous power of evolutionary theory by elucidating human behavior and its development and the various ways it is manifested in different environments Evolutionary Perspectives on Human Development applies evolutionary theory to such topics as parent child relationships the maltreatment of children psychopathology cooperation and competition among siblings and the acquisition of vital resources in different cultural settings from an evolutionary point of view Key Features Comprehensive coverage of the impact of evolutionary theory on human development provides students with the most thorough foundation available in this area Contributions by leading scholars and researchers expose readers to the exciting research and developments that have been occurring in the field An introductory chapter written by the volume editors provides an accessible overview of the book Evolutionary Perspectives on Human Development provides state of the art groundwork in evolutionary theory as viewed by leading thinkers in the field It is an excellent supplementary textbook for advanced undergraduate and graduate courses in evolutionary and developmental psychology

Handbook of Cultural Psychology, First Edition Shinobu Kitayama, Dov Cohen, 2010-01-04 Bringing together leading authorities this definitive handbook provides a comprehensive review of the field of cultural psychology Major theoretical perspectives are explained and methodological issues and challenges are discussed The volume examines how topics fundamental to psychology identity and social relations the self cognition emotion and motivation and development are influenced by cultural meanings and practices It also presents cutting edge work on the psychological and evolutionary underpinnings of cultural stability and change In all more than 60 contributors have written over 30 chapters covering such diverse areas as food love religion intelligence language attachment narratives and work
