Sertoli Cell Biology:

Sertoli Cell Biology Michael D. Griswold, 2014-11-19 This book summarizes the progress since the last edition and emphasizes the new information available on Sertoli germ cell interactions. This information is especially timely since the progress in the past few years has been exceptional and it relates to control of sperm production in vivo and in vitro. Fully revised. Written by experts in the field. Summarizes 10 years of research. Contains clear explanations and summaries. Provides a summary of references over the last 10 years. **Sertoli Cell Metabolism and Spermatogenesis**

Pedro F. Oliveira, Marco G. Alves, 2015-11-29 This book is focused on Sertoli cell physiology and its role in the spermatogenic event. These cells, known as nurse cells, are essential for the normal development of germ cells by offering not only physical support and creating an immune privileged environment but also for providing nutritional support. The presence of Sertoli cells promotes the establishment of the appropriate microenvironment so that spermatogenesis may occur. Spermatogenesis maintenance in vivo is highly dependent on the metabolic cooperation established between Sertoli cells and developing germ cells. For many years, this metabolic cooperation between testicular cells has been disregarded, but recent advances have highlighted the relevance of these processes for male fertility. Thus, the understanding of the functioning and regulation of these metabolic processes is a crucial step to identify key mechanisms associated with Sertoli cell dysfunction and to enlighten their influence on male fertility. *Regulation of Sertoli Cell and Germ Cell Differentiation* R. Brehm, Klaus Steger, 2005-12-12

Unwanted childlessness affects approximately one in six couples worldwide, though the exact proportion of the predominant cause of the problem remains controversial according to the World Health Organization (WHO). In nearly 40% of cases, the cause can be attributed to the female; in 20% to the male; in 25% to both; and in 15% the cause remains unknown. Based on these figures, the incidence of male factor infertility in the general population is approximately 7%. The majority of these men, approximately 30%, experience irreversible idiopathic infertility and cannot father children without some form of medical intervention. Male factor infertility, in addition, may be caused by testicular germ cell cancer, which is known to represent the most common cancer among young men aged 15 to 35 years in Western industrialized countries. The number of affected men has increased dramatically over the past 50 years. There is now growing evidence that human testicular germ cell cancer originates from fetal germ cells exhibiting an aberrant programme of gene expression and tumour progression may be favoured by an aberrant Sertoli cell germ cell communication. *Regulation of Sertoli Cell and Germ Cell Differentiation* R.
