

The background of the book cover is a microscopic image of a blood smear. It features numerous small, pale, circular red blood cells (erythrocytes) scattered across the field. Several larger white blood cells (leukocytes) are also visible, characterized by their larger size and prominent, dark purple nuclei. One leukocyte in the lower right shows a distinct, kidney-shaped nucleus, typical of a monocyte. The overall color palette is dominated by the pale pink of the red blood cells and the deep purple of the leukocyte nuclei.

**Pediatric Hematology** Nicholas J. Goulden, Colin G. Steward, 2008-02-01 Much of the progress in the diagnosis classification and treatment of childhood hematological disorders has come from a partnership between clinicians and scientists Indeed access to molecular techniques is now an integral part of the practice of modern pediatric hematology The aim of Pediatric Hematology Methods and Protocols is to provide a collection of scientific protocols that cover the major aspects of the discipline Most clinicians will be familiar with the difficulties inherent in establishing the underlying diagnosis in genetic marrow failure syndromes A particular concern is failure to diagnose those associated with DNA repair defects In Chapter 1 Dokal and colleagues present simple protocols for the molecular investigation of Fanconi anemia and dyskeratosis congenita Molecular diagnosis is also important in children with congenital pure red cell aplasia owing to the highly variable phenotype of this condition In Chapter 2 Ball describes relevant protocols for the investigation of Diamond Blackfan anemia Hereditary hemoglobinopathy is a major cause of death and morbidity throughout the world This

area has seen great advances in screening and antenatal diagnosis In Chapter 3 Old details protocols for the molecular diagnosis of most forms of hemoglobinopathy High quality accurate molecular testing on small amounts of material has been fundamental to progress in antenatal diagnostics The introduction to his comprehensive chapter includes a discussion of the general principles that underpin these studies In contrast to hemoglobinopathy severe hemophilia is uncommon Colour Atlas of Paediatric Haematology Ian M. **Pediatric Hematology-Oncology in Countries with Limited Resources** Daniela Cristina Stefan, Carlos Rodriguez-Galindo, 2013-11-18 Typically manuals of pediatric hematology oncology are written by specialists from high income countries and usually target an audience with a sub specialist level of training often assisted by cutting edge diagnostic and treatment facilities However approximately 80% of new cases of cancer in children appear in mid and low income countries Almost invariably general practitioners or general pediatricians without special training in oncology will look after children with malignancies who enter the health care system in these countries The diagnostic facilities are usually limited as are the treatment options The survival figures in these conditions are somewhere below 20% while in high income countries they are in the range of 80% for many childhood cancers Pediatric Hematology Oncology in Countries with Limited Resources is the only book of its kind to provide specific guidance applicable to limited resource settings and builds up from the foundation of general practitioner or general pediatrician competence Written and edited by leaders in the field this manual educates physicians on the essential components of the discipline filtered through the experience of specialists from developing countries with immediate applicability in the specific healthcare environment in these countries
