Pain Clinical And Experimental Perspectives:

Pain Matisyohu Weisenberg,1975 *Phantom Pain* Richard A. Sherman,2013-03-14 Phantom pain is an intriguing mystery that has captured the imagination of health care providers and the public alike How is it possible to feel pain in a limb or some other body part that has been surgically removed Phantom pain develops among people who have lost a limb or a breast or have had internal organs removed It also occurs in people with totally transected spinal cords Unfortunately phantom pain is a medical night mare Many of the people reporting phantom pain make disproportionately heavy use of the medical system because their severe pains are usually not treated successfully The effect on quality of life can be devastating Phantom pain has been reported at least since 1545 Weir Mitchell as related by Nathanson 1988 and or experienced by such diverse people as Admiral Lord Nelson and Ambroise Pare Melzack Davis 1993 The folklore surrounding phantom pain is fascinating and mirrors the concepts about how our bodies work that are in vogue at any particular time Most of the stories relate to phantom limbs and date from the mid 1800s The typical story goes like this A man who had his leg amputated complained about terrible crawling twitching feelings in his leg His friends found out where the leg was buried dug it up and found maggots eating it They burned it and the pain stopped Another man complained of a swollen feeling with frequent stinging or biting pains

Non-biomedical Perspectives on Pain and its Prevention and Management Mark I. Johnson,James Woodall,Emmanouil Georgiadis ,Antonio Bonacaro,Isobel Jacob,2024-06-06 Overreliance on the biomedical paradigm has contributed in part to illogical use of surgery and long term opioid medication with harmful physical psychological social and economic consequences Pain literature is dominated by biomedical research at the expense of a holistic understanding of the lived experience of pain Pain practice seems overly consumed with the burden of pain at an individual level patient centred pain management and has neglected exploration of

societal level community centred or environmental level ecologically centred solutions

The Relevance of Social Science for Medicine L. Eisenberg, A. Kleinman, 2012-12-06 The central purpose of this book is to demonstrate the relevance of social science concepts and the data derived from empirical research in those sciences to problems in the clinical practice of medicine As physicians we believe that the biomedical sciences have made and will continue to make important contributions to better health At the same time we are no less firmly persuaded that a comprehensive understanding of health and illness an understanding which is necessary for effective preventive and therapeutic measures requires equal attention to the social and cultural determinants of the health status of human populations The authors who agreed to collaborate with us in the writing of this book were chosen on the basis of their experience in designing and executing research on health and health services and in teaching social science concepts and methods which are applicable to medical practice We have not attempted to solicit contributions to cover the entire range of the social sciences as they apply to medicine Rather we have selected key approaches to illustrate the more salient areas These include social epidemiology health services research social network analysis cultural studies of illness behavior along with chapters on the social labeling of deviance patterns of therapeutic communication and economic and political analyses of macro social factors which influence health outcomes as well as services

Pain in the Cancer Patient M. Zimmermann, P. Drings, G. Wagner, 2012-12-06 Pain is unfortunately not an early symptom in neoplastic diseases. When it occurs however, as it so often does in the advanced stages of the disease, then it can be particularly severe. Many physicians are not able to treat such pain efficiently with the standard methods familiar to them. Even in the oncological clinic it is common for cancer patients not to receive adequate treatment of their pain; the therapeutic efforts are directed principally at the cancer, the pain often being neglected. This book fills a gap in the literature and should enhance the awareness of pain of all those who deal with cancer patients. For the patient the symptoms of the disease are usually the direct cause of suffering and pain is often the most severe symptom. The pain may be potentiated by knowledge of the threat posed by the cancer or may itself considerably increase the patient's existing anxiety. Thus there is a vicious circle of pain and psychological factors which will reduce the patient to a state of despair and distress. It is therefore obvious that efficient pain therapy is of utmost significance to the patient who will judge the doctor's ability to provide medical assistance according to the degree of pain relief achieved. The patient's quality of life will also depend critically on the relief obtained.
