Management in Emergency Medicine Maybritt Kuypers,2023 This thesis describes the advances of procedural pain
management in Emergency Medicine in the Netherlands Emergency Physicians have played an instrumental role in the
introduction of procedural sedation and analgesia PSA in the emergency department In the first part of this thesis the safety
efficacy and costs of PSA performed by Emergency Physicians was assessed This thesis demonstrates the capability of
Emergency Physicians to perform safe and effective PSA in adult and pediatric patients The presence of skilled Emergency
Physicians has improved the quality availability and costs of advanced pain treatment in patients who need to undergo
painful procedures for example the reduction of a dislocated joint or fracture in the emergency department In the second
part the implementation of PSA was evaluated by assessing the skills of the providers guideline adherence and availability of
PSA in emergency departments staffed with or without Emergency Physicians This research revealed that the availability of
PSA and adherence to PSA guidelines was not up to par in the departments which had no Emergency Physicians on staff In
the last part of this thesis new strategies for procedural pain management in the emergency department were explored
Peripheral nerve blocks performed by Emergency Physicians were compared to PSA on efficacy safety and length of stay in
the emergency department Nerve blocks appear to be a promising technique with the important advantage of a reduced
length of stay in the emergency department Finally a novel audiovisual distraction tool was evaluated for use during wrist
fracture reductions in adult emergency patients A clear advantage on pain or anxiety reduction was not found However more
research is needed to better assess its value in distinct emergency patient categories In conclusion Emergency Physicians
have an important responsibility to ensure high quality and safe analgesia in the emergency department They also have the
duty to keep pushing the frontier on pain management in Emergency Medicine with evidence based research *Rosen's*
