Palaeohydrology Jürgen Herget, Alessandro Fontana, 2019-06-29 The book provides a review of the most relevant topics on the booming discipline of palaeohydrology and focuses on previous extreme events like exceptional floods and droughts Reviews written by leading experts of their fields are combined with selected key studies and presentations on up to day methodical and conceptional topics as a perspective for further research Consequently the compilation provides an excellent review on the state of the art of numerous relevant topics of palaeohydrology and acts as unique introduction for early career scientists and scientists of different disciplines working on hydrological extreme events both in basic research and applied aspects

Hydrology and Global Environmental Change Nigel W. Arnell, 2014-10-13 Hydrology and Global Environmental Change presents the hydrological contribution to and consequences of global environmental change Assuming little or no prior knowledge on the part of the reader the book looks at the main processes of global environmental change global scale processes large regional processes repetitive processes and how the

hydrological cycle processes and regimes impact on GEC and vice versa

The SAGE Handbook of Environmental Change John A Matthews, 2012-01-31 The SAGE Handbook of Environmental Change is an extensive survey of the interdisciplinary science of environmental change including recent debates on climate change and the full range of other natural and anthropogenic changes affecting the Earth ocean atmosphere system in the past present and future It examines the historic importance present status and future prospects of the field over two volumes With more than 40 chapters the books situate the defining characteristics and key paradigms within a state of the art review of the field including its changing nature and diversity of approaches evidence base key theoretical arguments resonances with other disciplines and relationships between theory research and practice Opening with a detailed contextualizing essay by the editors the work is arranged into six parts Part One Approaches to Understanding Environmental Change Part Two Evidence of Environmental Change and the Geo ecological Response Part Three Causes Mechanisms and Dynamics of Environmental Change Part Four Key Issues of Human induced Environmental Changes and Their Impacts Part Five Patterns Processes and Impacts of Environmental Change at the Regional Scale Part Six Responses of People to Environmental Change and Implications for Society Global in its coverage scientific and theoretical in its approach the books bring together an international set of respected editors and contributors to provide an exciting timely addition to the literature on climate change With the subjects interdisciplinary framework this book will appeal to academics researchers postgraduates and practitioners in a variety of disciplines including geography geology ecology environmental science archaeology anthropology politics and sociology

Late Quaternary Environmental Change Martin Bell, M.J.C. Walker, 2014-07-10 Late Quaternary Environmental Change addresses the interaction between human agency and other environmental factors in the landscapes particularly of the temperate zone Taking an ecological approach the authors cover the last 20 000 years during which the climate has shifted from arctic severity to the conditions of the present interglacial environment

Abrupt Climate Change National Research Council, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, Polar Research Board, Ocean Studies Board, Committee on Abrupt Climate Change, 2002-05-23 The climate record for the past 100 000 years clearly indicates that the climate system has undergone periodic and often extreme shifts sometimes in as little as a decade or less The causes of abrupt climate changes have not been clearly established but the triggering of events is likely to be the result of multiple natural processes Abrupt climate changes of the magnitude seen in the past would have far reaching implications for human society and ecosystems including major impacts on energy consumption and water supply demands Could such a change happen again Are human activities exacerbating the likelihood of abrupt climate change What are the potential societal consequences of such a change Abrupt Climate Change Inevitable Surprises looks at the current scientific evidence and theoretical understanding to describe what is currently known about abrupt climate change including patterns and magnitudes mechanisms and probability of occurrence It identifies critical knowledge gaps concerning the potential for

future abrupt changes including those aspects of change most important to society and economies and outlines a research strategy to close those gaps Based on the best and most current research available this book surveys the history of climate change and makes a series of specific recommendations for the future **Palaeohydrology** K. J. Gregory, G.

Benito, 2003-06-02 With considerable interest in global change this topical book provides a general overview of global paleohydrology The first section provides a global review of the field by exploring real world hydrological scenarios during past environmental changes over extensive areas of Europe America Africa Asia and Australasia This is followed by an up to date review of the key methodologies of fluvial palaeohydrology and the hydrological methods for palaeohydrological construction Team of international contributors focusing on major issues rather than regional detail Associated website containing database expanded bibliography reports from international programmes eg INQUA Earth System Processes and Disaster Management

Rajiv Sinha, Rasik Ravindra, 2012-08-14 One of the fundamental goals of earth system science research is to adopt a more holistic view of the earth as a system comprising different domains The Society of Earth Scientists has brought out this multidisciplinary publication to emphasize the need of an integrated approach to understand the Earth system It focuses on natural disasters and in particular on climate change and its effects in Asia and understanding the significance of these developments within the context of the paleo climatic record The later sections of the book then focus on other types of natural disasters as well as those induced by human interaction with our environment River

Channel Management Peter Downs, Ken Gregory, 2014-02-24 River Channel Management is the first book to deal comprehensively with recent revolutions in river channel management It explores the multi disciplinary nature of river channel management in relation to modern management techniques that bear the background of the entire drainage basin in mind use channel restoration where appropriate and are designed to be sustainable River Channel Management is divided into five sections The Introduction outlines the need for river channel management Retrospective Review offers an overview of twentieth century engineering methods and the ways that river channel systems operate Realisation explains how greater understanding of river channel adjustments channel hazards and river basin planning created a context for twenty first century management Requirements for Management explains and examines environmental assessment restoration based approaches and methods that work towards design with nature Final Revision speculates about prospects for twenty first century river channel management River Channel Management is written for higher level undergraduates and for postgraduates in geography ecology engineering planning geology and environmental science for professionals involved in river channel management and for staff in environmental agencies *Progress in Palaeohydrology* INQUA Commission on

Regional Hydrological Response to Climate Change J.A. Jones, Changming Liu, Ming-Ko Woo, Hsiang-Te Kung, 2012-12-06 This volume arises from the work of the International Geographical Union Working Group on Regional Hydrological Response to Climate Change and Global Warming under the chairmanship of Professor Changming Liu 1992 96 The book consists mostly of peer reviewed papers delivered at the Working Group s first three scientific meetings held in Washington D C 1992 Lhasa Tibet 1993 and Moscow 1995 These have been supplemented by a few additional chapters that have been specifically commissioned in order to give a well rounded coverage of the global and scientific aspects of the topic As editors we have sought to balance state of the art reviews of methodology and regional research with detailed studies of specific countries and river basins In the spirit of the IGU we have devoted particular effort to encouraging contributions from scientists in the non English speaking world These chapters provide valuable evidence of recent climatic change and predictions of future hydrological impacts from parts of the world where little detailed work has been conducted hitherto They provide much valuable information that is new and interesting to an international audience and is otherwise very difficult or impossible to acquire It is hoped that the present volume will be not only a record of current achievements but also a stimulus to further hydrological research as the detail and spatial resolution of Global Climate Models improves One notable aspect that emerges from a number of the contributions is that many though by no means all recent hydrological trends are in line with global warming predictions

Monitoring and Modelling Dynamic Environments Alan P. Dykes, Mark Mulligan, John Wainwright, 2015-09-28 The Times Obituaries 4 August 2008 reported that John Thornes was one of the most eminent and influential physical geographers of his generation John s keen interest in understanding landform processes and evolution was furthered through a variety of methods and informed across a range of disciplinary boundaries In particular he pushed for better integration of monitoring theoretical and simulation modelling field and laboratory experimentation and remote sensing techniques Although dominated by an interest in the Mediterranean region and problems of land degradation his research activities ranged across a number of time scales and with other environmental perspectives This collection of papers reflects this wide range of John s interests through the recent work of scientists and professionals most strongly influenced by his rigorous training or leadership The thematic focus of the book which runs through all of the main contributions is the integration of different methodologies and the application of this approach to improved understanding of natural systems and the development of appropriate strategies for environmental and resource management Short overviews of John s contributions to geomorphological research are also presented to provide context for the origins of this book

Global Continental Changes Julia Branson, Antony Gavin Brown, Kenneth John Gregory, 1996

Palaeohydrology is the study of changes in the waters of the Earth prior to continuous monitoring Knowledge of these changes is important for the understanding of past and present environmental changes and of the form of the present day environment The evolution of the hydrological cycle in response to climatic change produces a chain of environmental and human consequences factors that are becoming more relevant as climate change is predicted Evidence of past environmental changes may be used to validate models with which to predict future change thus the study of rates mechanisms and processes of Late Quaternary hydrological changes is of critical importance This volume is designed for all who are interested in the hydrological impacts of climatic change and the contribution that palaeohydrology can make to the study of these changes

The Earth's Land Surface Kenneth J Gregory, 2010-03-23 Given the sheer scale of the topic under consideration here Professor Gregory does well to condense it into bite size pieces for the reader I recommend this text to all undergraduate students of physical geography and earth sciences particularly to those in their first and second years This book is a comprehensive and crucially inexpensive text that will provide students with a useful source on geomorphology Lynda York The Geographical Journal I would highly recommend this to anyone doing geology or geography at university as a go to book for geomorphology and landform Sara Falcone Teaching Earth Science An excellent source of information for anyone who needs a well informed easy to use reference volume to introduce them to the fascinating complexities of the earth's land surface past present and future Angela Gurnell Queen Mary University of London This introductory text details the land surface of the earth in a readable style covering the major issues key themes and sensitivities of the environments landscape Emphasising the major ideas and their development each chapter includes case studies and details of influential scientists not necessarily geomorphologists who have contributed to the progress of understanding Providing a very clear explanation of the understanding achieved and of the debates that have arisen the book is comprised of 12 chapters in four sections Visualising the land surface explains and explores the composition of the land surface and outlines how it has been studied Dynamics of the land surface considers the dynamics affecting the earth's land surface including its influences processes and the changes that have occurred Environments of the land surface looks to understand the land surface in major world regions highlighting differences between the areas Management of the land surface is an examination of the current and future prospects of the management of the earth's land surface With pedagogical features including further reading questions for discussion and a glossary this original lively text is authored by one of the leading experts in the field and will be core reading for first and second year undergraduates on all physical geography courses

Third Millennium BC Climate Change and Old World Collapse H. Nüzhet Dalfes, George Kukla, Harvey Weiss, 2013-06-29 Around 4000 years ago the advanced urban civilizations in Egypt Mesopotamia and India suddenly collapsed What happened Did a prolonged drought cause the breakdown of social order Recent discoveries from all over the world strongly support the suspected link of the collapse with climate The volume presents the findings of more than 40 researchers and provides a review on the

relevant information It appears that a major shift of the precipitation pattern affected many parts of the world at approximately the same time with disastrous effects on the nomadic populations of Asia Africa and Eastern Europe Can a similar climate shift with a serious adverse impact on society happen again In a world facing global warming there could be many lessons to be learned from the experiences of ancient societies
